TEST DETAILS

General

Sample descriptions were written in accordance with BS 5930:1999.

Samples were prepared in accordance with BS 1377: Part 1: 1990, section 7

Samples from this contract will be retained for 1 calender month following the issue of this report unless otherwise notified

Written approval is required from Fastrack Site Investigations Limited to reproduce report in full. The results shown within this report only relate to the samples tested

Moisture Content

Samples were tested in accordance with BS 1377: Part 2: 1990, section 3.2 (Oven drying method)

In accordance with Note 1 to paragraph 3.2.4 of BS 1377 Part 2 1990; these moisture contents have been corrected to give the equivalent moisture content of the fraction passing the 425µm sieve, to enable comparison with the liquid & plastic limits. (If condition of test is 'natural' the retained percentage is an estimated value, if condition is 'washed' the percentage is a measured value).

Samples are dried at 105-110°C unless otherwise stated.

Atterberg Limits

Samples were tested in accordance with BS 1377: Part 2: 1990, section 4.3 (4 drop LL), 4.4 (1 drop LL), 5.3 (PL) and 5.4 (PI)
Test results on samples with a sand content, may show less accurate results. If condition of test is 'washed' results relate to the fraction passing the 425µm sieve only.

* Driscoll's rules deem the soil to be desicated where the moisture content is less than the value calculated using driscoll's rule 1 and/or 2

Particle Size Distribution

Samples were tested in accordance with BS 1377: Part 2: 1990 section 9.2 (Wet sieving method)

Undrained Shear Stength

Samples were prepared in accordance with BS 1377: Part 7: 1990 section 8.3 and testing in accordance with BS 1377: Part 7: 1990: section 8.4 (undrained shear strength in triaxial compression without measurement of pore pressure (UU))

Soil Suction

Samples were prepared and tested based on the BRE digest No:IP4/93 (Corrected). 'A method of determining the state of desiccation in clay soils.' (Filter paper method).

Test results on samples with a sand or silt content, may show less accurate results. Deviation to standard procedure - Polythene bags are not used from weighing filter papers.

ROOT IDENTIFICATION

14 Eton Avenue,

Client Reference:

Report Date:

15 February 2023

Our Ref:

Sub Sample Species Identified			Root Diameter	Starch
BH1:				
1.15m	Magnolia spp.		1.5 mm	Abundant
1.5m	probably Sambucus spp.	1	1.5 mm	Moderate
2m	Monocotyledon spp.	2	<1 mm	Absent

Comments:

- 1 In poor condition, lacking bark.
- 2 In a state of decay.

Magnolia spp. are common flowering trees (magnolias).

Sambucus spp. are elders.

Monocotyledon spp. include palms, grasses, bamboos and lilies.

Signed: M D Mitchell

Unless we are otherwise instructed in writing, the above sample material will normally be disposed of 6 years after the date of this report.

DRAINAGE SURVEY

Property Address: 14 Eton Avenue, London, NW3 3EH

Client Claim Ref: Survey date: 26/01/2023 Operative: SE2

Following your recent instruction we attended the above property and carried out a cctv camera survey and hydraulic testing of the drainage, in accordance with procedures detailed in the WRc Drain Repair Book.

Node	Invert Level (m)	Manhole Construction	Pipe Size	Pipe Material	Manhole Condition	Type of Cover	Size of Cove
MH1	0.70	Brick	150mm	Clay	FAIR	Galvanised	930x630
MH2	0.75	Brick	150mm	Clay	GOOD	Iron	600x480

Hydra	Hydraulic Testing Summary:										
Run	From	То	Result	Remarks							
1											
2											
3											
4											
5											
6											

Servic	eability:	
1	Is the system failing to discharge normal household flows to the sewer system? (i.e. recurrance of blockage)	No
2	Is there evidence of leakage occuring (infiltration or exfiltration)?	No
3	Is there intermittent storm-water flooding?	Undetermined
4	Has a hydraulic leakage test failed?	N/A
5	Do observed defects make the drain unserviceable?	No

Comments:

5	MH1	Upstream	100mm	Clay	Foul	Upstream	Private						
6	MH1	Downstream	150mm	Clav	Foul	Downstream	Shared						

Grade Guidelines:

Grade A

Condition grade A: Structurally sound with no leakage evident. Slight crack/defects permitted.

Grade B

Condition grade B: Cracks and/or fractures observed but pipe provides sufficient arching support.

Some leakage may be evident.

Condition grade C:Structurally unsound with insufficient arching support. Total collapse/blockage likely in the future. Grade C
