Parking and car-free development

- 10.15 Limiting the opportunities for parking within the borough can reduce car ownership and use and therefore lead to reductions in air pollution and congestion and improve the attractiveness of an area for local walking and cycling. Car-free development will also mean that the borough's limited land can be used more efficiently, which will help to free up space to allow additional housing, employment uses, community facilities, play areas, amenity spaces and cycle parking. The Council does however also recognise that some people, businesses and organisations, rely on private car use as their only transport option. Parking provision for disabled people and essential uses will therefore be considered where necessary.
- 10.16 Camden is well connected. In most areas of the borough, essential day to day services such as shops, healthcare and education facilities and employment opportunities are no more than short journey away by walking, cycling or public transport. To compliment Camden's existing levels of parking provision, the borough currently also has the largest car club network in London, with over 250 car club parking bays. The car club network therefore provides a real alternative to private car ownership for people who need to use a car occasionally.

Policy T2 Parking and car-free development

The Council will limit the availability of parking and require all new developments in the borough to be car-free.

We will:

- not issue on-street or on-site parking permits in connection with new developments and use legal agreements to ensure that future occupants are aware that they are not entitled to on-street parking permits;
- b. limit on-site parking to:
 - i. spaces designated for disabled people where necessary, and/or
 - essential operational or servicing needs;
- c. support the redevelopment of existing car parks for alternative uses; and
- d. resist the development of boundary treatments and gardens to provide vehicle crossovers and on-site parking.

Car-free in new developments

10.17 Car-free development means that no car parking spaces are provided within the site other than those reserved for disabled people and businesses and services reliant upon parking, where this is integral to their nature, operational and/or servicing requirements (e.g. emergency services, storage and distribution uses). In addition, current and future occupiers are not issued with on-street parking permits.

All new residential developments in the borough should be car-free. Parking will only be considered for new non-residential developments where it can be demonstrated that the parking provided is essential to the use or operation of the development. Staff parking is not considered essential and will not be permitted. Parking for disabled people for both residential and non-residential developments should be provided where it can be demostrated as necessary, taking into account existing availability of on-street parking for Blue Badge holders. Further information can be found within Camden Planning Guidance on transport.

Redevelopments

- 10.19 Land is an important resource, particularly within a densely populated area such as Camden. The Council will therefore support the development of parking space for alternative uses.
- In redevelopment schemes, the Council will consider retaining or reproviding existing parking provision where it can be demonstrated that the existing occupiers are to return to the address when the development is completed. This is common where an existing dwelling or block is being extended or subdivided. It can also occur where a change of use brings a site or property into residential occupation. If a development is to have new occupiers, this should be car-free. Where redevelopment involves a town centre car park identified in Camden's Site Allocations Plan as supporting the functioning of the town centre, the Council will consider the retention of the existing parking provision or a lower level of provision on-site. Any new development on the existing car park should be car free in accordance with Policy T2.

Boundary treatments and gardens

Parking can cause damage to the environment. Trees, hedgerows, boundary walls and fences are often the traditional form of enclosure on Camden's streets, particularly in conservation areas, contributing greatly to their character, as recognised in Camden's Conservation Area Appraisals and Management Strategies. This form can be broken if garden features are replaced by areas of paving or hard standing. Development of boundary treatments and gardens to provide on-site private parking often requires the loss of much needed public on-street parking bays to create vehicle crossovers. Areas of paving can also increase the volume and speed of water run-off. This adds to the pressure upon the drainage system and increases the risk of flooding from surface water. Developments seeking to replace garden areas and/or boundary treatments for the purposes of providing on-site parking will therefore be resisted.

Transport infrastructure

10.22 Projects to provide new and improved transport infrastructure will play a central role in supporting growth and promoting sustainable transport within the borough. As major development will largely be concentrated in locations that are, or will be, subject to significant transport improvements, land and facilities will therefore need to be safeguarded in order to ensure delivery of these projects.

Policy T3 Transport infrastructure

The Council will seek improvements to transport infrastructure in the borough.

We will:

- a. not grant planning permission for proposals which are contrary to the safeguarding of strategic infrastructure improvement projects; and
- protect existing and proposed transport infrastructure, particularly routes and facilities for walking, cycling and public transport, from removal or severance;
- 10.23 Camden's Infrastructure Table (Appendix 1) contains details of the key infrastructure improvements due to take place. The schedule includes 32 transport projects such as:
 - High Speed 2: new north-south railway linking London to Birmingham including potential redevelopment of Euston Station.
 - Crossrail 1: new east-west railway through London from Reading/Heathrow to Abbey Wood and Shenfield.
 - Crossrail 2: new north-south railway running from Surrey to Hertfordshire through London.
 - West End Project: introduction of two-way traffic at Tottenham Court Road and Gower Street and public realm improvements, including at Euston Circus, St Giles Circus and Princes Circus.
 - Camden Town and Holborn Station capacity improvements.
 - North-South Cycle Superhighway: segregated cycle corridor between King's Cross and Elephant and Castle.
- 10.24 Given the constraints on transport capacity in a densely developed borough like Camden, almost every part of existing transport infrastructure is a valuable asset. The Council will therefore seek to protect all existing and proposed transport facilities and links and safeguard the potential for improvements to the transport network.
