2023/2021/T	Joseph Jacob	08/06/2023 20:36:24	COMNOT	To further clarify, Laurel trees produce hydrocyanic acid which is a toxin to humans, animals and birds. It is given off in particular abundance when leaves wilt or fall. The reason we ask for permission to remove the tree is because of the birds in the vicinity and because our children play in the garden particularly around a playhouse built next to the tree. Accordingly, we are concerned they could be affected by the trees secretions.
