EXECUTIVE SUMMARY

KP Monitoring Ltd has been commissioned to monitor the air quality levels at the 52 Avenue Road site, 52 Avenue Road, St Johns Wood, London NW8 6HP.

Air quality levels have been measured at 4No. positions around the development site. The measured parameters include PM2.5 particulate, PM10 particulate.

The following dust level exceedances were recorded across the development site during the monitoring period.

Position	Trigger Level Exceedances	Action Level Exceedances	Data Capture Rate
Position 1	N/A	N/A	94%
Position 2	N/A	N/A	100%
Position 3	N/A	N/A	100%
Position 4	N/A	N/A	100%

Table 1 Recorded exceedance events at the development site

The results are presented herein.

1.0 INTRODUCTION

KP Monitoring Ltd have been appointed by Domvs London (Global Holdings) Ltd to monitor the ongoing air quality levels from the site at 52 Avenue Road, and to present the results within baseline monthly reports.

This report details the procedures employed and the data obtained during the monitoring period spanning Tuesday 25 April 2023 to Wednesday 24 May 2023.

2.0 SITE DESCRIPTION

The monitoring site is located within the London Borough of Camden's jurisdiction. It is bounded by Elsworthy Road to the north, Elsworthy Road to the west, residential properties to the south, and large residential landscapes to the east.

3.0 SITE WORKING HOURS

It is our understanding that no works are currently taking place at the development site. Once work commence, however, we understand that works shall take place between the following hours. These daytime periods shall hereby be referred to as the 'Working Day'.

Day	Start time	End Time
Monday	08:00	18:00
Tuesday	08:00	18:00
Wednesday	08:00	18:00
Thursday	08:00	18:00
Friday	08:00	18:00
Saturday	08:00	13:00
Sunday	No Work	No Work

Table 2 Site working hours referred to as 'Working Day'

4.0 INSTALLED EQUIPMENT

Air quality monitoring equipment was installed at the 52 Avenue Road site, and has been continuously serviced, calibrated, and maintained, since Wednesday, 25 January 2023. The following equipment is currently installed:

Position	Manufacturer	Model	Serial
Position 1	Earthsense	Zephyr	1149
Position 2	Earthsense	Zephyr	1169
Position 3	Earthsense	Zephyr	948
Position 4	Earthsense	Zephyr	1043

Table 3 Installed sensor details

Each of the installed air quality monitoring sensors is equipped with a data logger and modem, and is protected from the elements with an environmental kit.

5.0 MONITORING POSITIONS

Air quality monitoring sensors have been installed at 4No. positions around the development site. See site plan in Appendix D. The following table describes these positions.

Position	Monitoring Position
Position 1	The monitor is situated adjacent to Elsworthy Road at an approximate height of 2.5 metres.
Position 2	The monitor is situated adjacent to Elsworthy Road on the north western area of site and is at an approximate height of 2.5 metres.
Position 3	The monitor is situated on the south eastern area of site and is at an approximate height of 1 metre.
Position 4	The monitor is situated on the north eastern area of site and is at an approximate height of 1 metre.

Table 4 Description of monitoring positions

The above positions were recommended and approved by Camden Council as demonstrated in the attached email chain.

6.0 METHODOLOGY

Fully automated air quality monitoring has been undertaken at the 52 Avenue Road site, from Tuesday 25 April 2023 to Wednesday 24 May 2023.

The air quality monitors are sensitive to airborne particle concentrations down to a fraction of a microgram per cubic metre and provide detailed air quality measurements in real-time. A dedicated microprocessor analyses individual particles even if there are millions per litre.

7.0 AIR PARTICULATE (DUST)

7.1 Measured Particulates

Fully automated dust monitoring has been undertaken to measure PM2.5, and PM10 particulate at the 52 Avenue Road site.

7.2 Project Trigger & Action Levels

It is our understanding that there are currently no defined air particulate Trigger and Action levels for this project.

Position	Trigger Level (PM10, $\mu\text{g}/\text{m}^3$, 15min)	Action Level (PM10, $\mu\text{g}/\text{m}^3$, 15min)
Position 1	N/A	N/A
Position 2	N/A	N/A
Position 3	N/A	N/A
Position 4	N/A	N/A

Table 5 Defined Trigger and Action levels at the development site

Table 6 Trigger and Action alert recipients

7.3 Air Particulate Monitoring Results

The measured dust levels are shown in Appendix B and the associated graphs. The following dust level exceedances were recorded across the development site during the monitoring period.

Position	Trigger Level Exceedances	Action Level Exceedances	Data Capture Rate
Position 1	N/A	N/A	94%
Position 2	N/A	N/A	100%
Position 3	N/A	N/A	100%
Position 4	N/A	N/A	100%

Table 8 Trigger and Action alert recipients

During the monitoring period of 25 April 2023 to Wednesday 24 May 2023, there were 0No. days when PM10 particulate matter levels exceeded 50µg/m³ over a 15-minute period at Position 1.

During the monitoring period of 25 March 2023 to Wednesday 24 May 2023, there were 0No. days when PM10 particulate matter levels exceeded 50µg/m³ over a 15-minute period at Position 2.

During the monitoring period of 25 March 2023 to Wednesday 24 May 2023, there were 0No. days when PM10 particulate matter levels exceeded 50µg/m³ over a 15-minute period at Position 3.

During the monitoring period of 25 March 2023 to Wednesday 24 May 2023, there were 0No. days when PM10 particulate matter levels exceeded 50µg/m³ over a 15-minute period at Position 4.

Using the data collected from the beginning of the project on 23 January 2023, we have estimated the Annual Mean PM10 particulate matter for each monitoring location. This

Annual Mean has been seasonally corrected to allow for the short-term monitoring period, and is presented below.

Background Site	Annual Mean 2022 (Am)	Period Mean 2023 (Pm)	Ratio (Am/Pm)
London Bloomsbury	17.3	14.2	1.2
Euston Road, Camden	20.6	16.4	1.3
Coopers Lane, Camden	16.5	11.2	1.5
Average (Ra)			1.3

Table 9 Annualised Continuous Monitoring Data for 23 January 2023 to 24 May 2023

The Period Mean PM 10 particulate matter at Position 1 was 11.56µg/m³. The best estimate of the Annual Mean at Position 1 for 2023 is 12.86µg/m³. The total data capture rate at this location was 93% for the monitoring period of 23 January 2023 to 24 May 2023.

The Period Mean PM 10 particulate matter at Position 2 was 14.59µg/m³. The best estimate of the Annual Mean at Position 1 for 2023 is 18.96µg/m³. The total data capture rate at this location was 98% for the monitoring period of 23 January 2023 to 24 April 2023.

The Period Mean PM 10 particulate matter at Position 3 was 11.48µg/m³. The best estimate of the Annual Mean at Position 1 for 2023 is 14.92µg/m³. The total data capture rate at this location was 89% for the monitoring period of 23 January 2023 to 24 April 2023.

The Period Mean PM 10 particulate matter at Position 4 was 11.33µg/m³. The best estimate of the Annual Mean at Position 1 for 2023 is 14.72µg/m³. The total data capture rate at this location was 97% for the monitoring period of 23 January 2023 to 24 April 2023.

8.0 DISCUSSION

Environmental air quality monitoring has been undertaken at the 52 Avenue Road site, during the period spanning Tuesday 25 April 2023 to Wednesday 24 May 2023.

The results are presented herein.

Unfortunately, we are unable to present data for Position 1 from Tuesday 02 May 2023 at approximately 2015 hours to Thursday 04 May 2023 at approximately 1230 hours.

This instance of data loss was caused by a depleted external battery. An engineer attended site on Thursday 04 May 2023 and proceeded to replace the depleted battery with a fully charged one.

APPENDIX A – AIR QUALITY TERMINOLOGY

PM_x Particulate Matter

Used as a measurement of air particles where x is the size of the particle measured in micrometres (or μm). PM₁₀ describes inhalable particles, with diameters that are 10 micrometres and smaller. Sources include crushing or grinding operations and dust stirred up by vehicles on roads. PM_{2.5} describes fine particles that are 2.5 micrometres or smaller in diameter and can only be seen with an electron microscope and are able to penetrate to the lungs. Typical sources include all types of combustion, including motor vehicles, power plants and agricultural burning. PM₁ describes particles that are 1 micrometre or smaller in diameter.

TSP Total Suspended Particles

Used as a measure of the mass concentration of particulate matter in the air. TSP covers the full range of particle sizes and is commonly measured alongside PM₁₀ and PM_{2.5}.

Nephelometer

Sometimes referred to as a turbidimeter, these devices are used to measure the concentration of particulates suspended in a fluid. Suspended particulates are measured by employing a light beam and a light detector set to one side (often 90°) of the source beam. Particle density is then a function of the light reflected into the detector from the particles.

APPENDIX B – MAXIMUM PM2.5/PM10 LEVELS

The following table presents the maximum PM2.5 levels measured during the period Tuesday 25 April 2023 to Wednesday 24 May 2023.

Date	Position 1	Position 2	Position 3	Position 4
25/04/2023	6	10	6	6
