OBJECTION: 2023/2245/P - 160-161 Drury Lane

Hello Enya,

The BCAAC has furthered looked at the plans for the above corner building on Drury Lane/Porter Street. We have a further strong objection. This extra objection is regarding the proposed plans at ground floor level. The proposal is to push forward the building line at ground level & if so, the Tuscan columns can & must still be retained. They are original features, and the only distinctive ones on the building. They also contribute to the warehouse aesthetic the developers themselves say they want. They could be retained and engaged with the wall brought forward. Further more, their ground floor design (if you can call it that) is much weaker. Ground floors are what people look at and have to live with. We are happy to meet with the developers to discuss this further.
