

## TWO TIER BIKE RACK INFORMATION SHEET

Our Two Tier Bike Rack is the ultimate solution for achieving high capacity cycle storage, even if usable floor space is at a premium. Designed to be user-friendly, hard-wearing, and exceptional value, it has become the bike rack of choice for both residential and commercial developments, enabling two tiers of bicycles to be stored safely either internally or externally.

This product accommodates a variety of bicycles, which are easily loaded and unloaded from the tyre channels and secured using built-in locking features at staggered heights. This minimises the width required between cycles to only 375mm. Bespoke centres over 375mm are also a possibility. We offer these racks with lower individual channels or integrated Sheffield Stands. We also offer these with "EasyGrip" handles in a variety of colours.

The standard required height for this product is 2500mm but a bespoke variant requiring only 2400mm in height can also be procured. For further information on this product or required dimensions please see our larger specification document or contact us using the details below.
