Re this planning application, we do not have the carbon budget to go on demolishing existing buildings and rebuilding them, if we are to keep temperature rise to below 2 degrees (as per the Paris Agreement), and wherever possible refurbishment and retrofit should be the preferred option. This approach of demolition and rebuilding just repeats what Boris Johnson was doing when he was Mayor of London, thus providing more profit for the developers at the cost of the environment. I suspect the same thing is going on here. A Labour Council that has endorsed a Climate Emergency should know better.
