

Camden Square Conservation Area Advisory Committee

83 Camden Mews

Date: 20 October 2023

Planning application Reference: 2023/3737/P

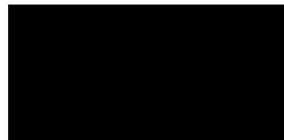

Proposal: Replacement of existing garage door with new timber framed wall and window with full height batten cladding, replacement and repositioning of the existing main front door and side panels, replacement of existing metal cage with new vertical timber batten enclosure including sliding gate and general re-cladding the ground floor with a dark timber battening, replacement of all existing windows with new double glazed casements, and new doors to second floor terrace

Summary: Proposal supported

Comments:

We support this well presented and clearly drawn proposal.

The changes to the entrance area are the most noticeable element and the introduction of slatted timber screens would enhance the house in context as well as reduce the problem of anti-social use. Overall this proposal would improve both the house and benefit the Camden Square Conservation Area.
