Figure 1 is a line graph illustrating the change in the number of cases of COVID-19 in the Republic of Serbia from March 1, 2020, to May 1, 2020. The vertical axis (y-axis) represents the number of cases, with a scale from 0 to 50,000. The horizontal axis (x-axis) represents time, with markers for March 1, April 1, and May 1. The graph shows a sharp increase in cases starting in late February, peaking in early April at approximately 45,000 cases, followed by a decline and then a slight increase in May.
