

# Area 1: Fence Panels

## Panel Printing

The panels will be printed as Dibond Aluminium Panels.

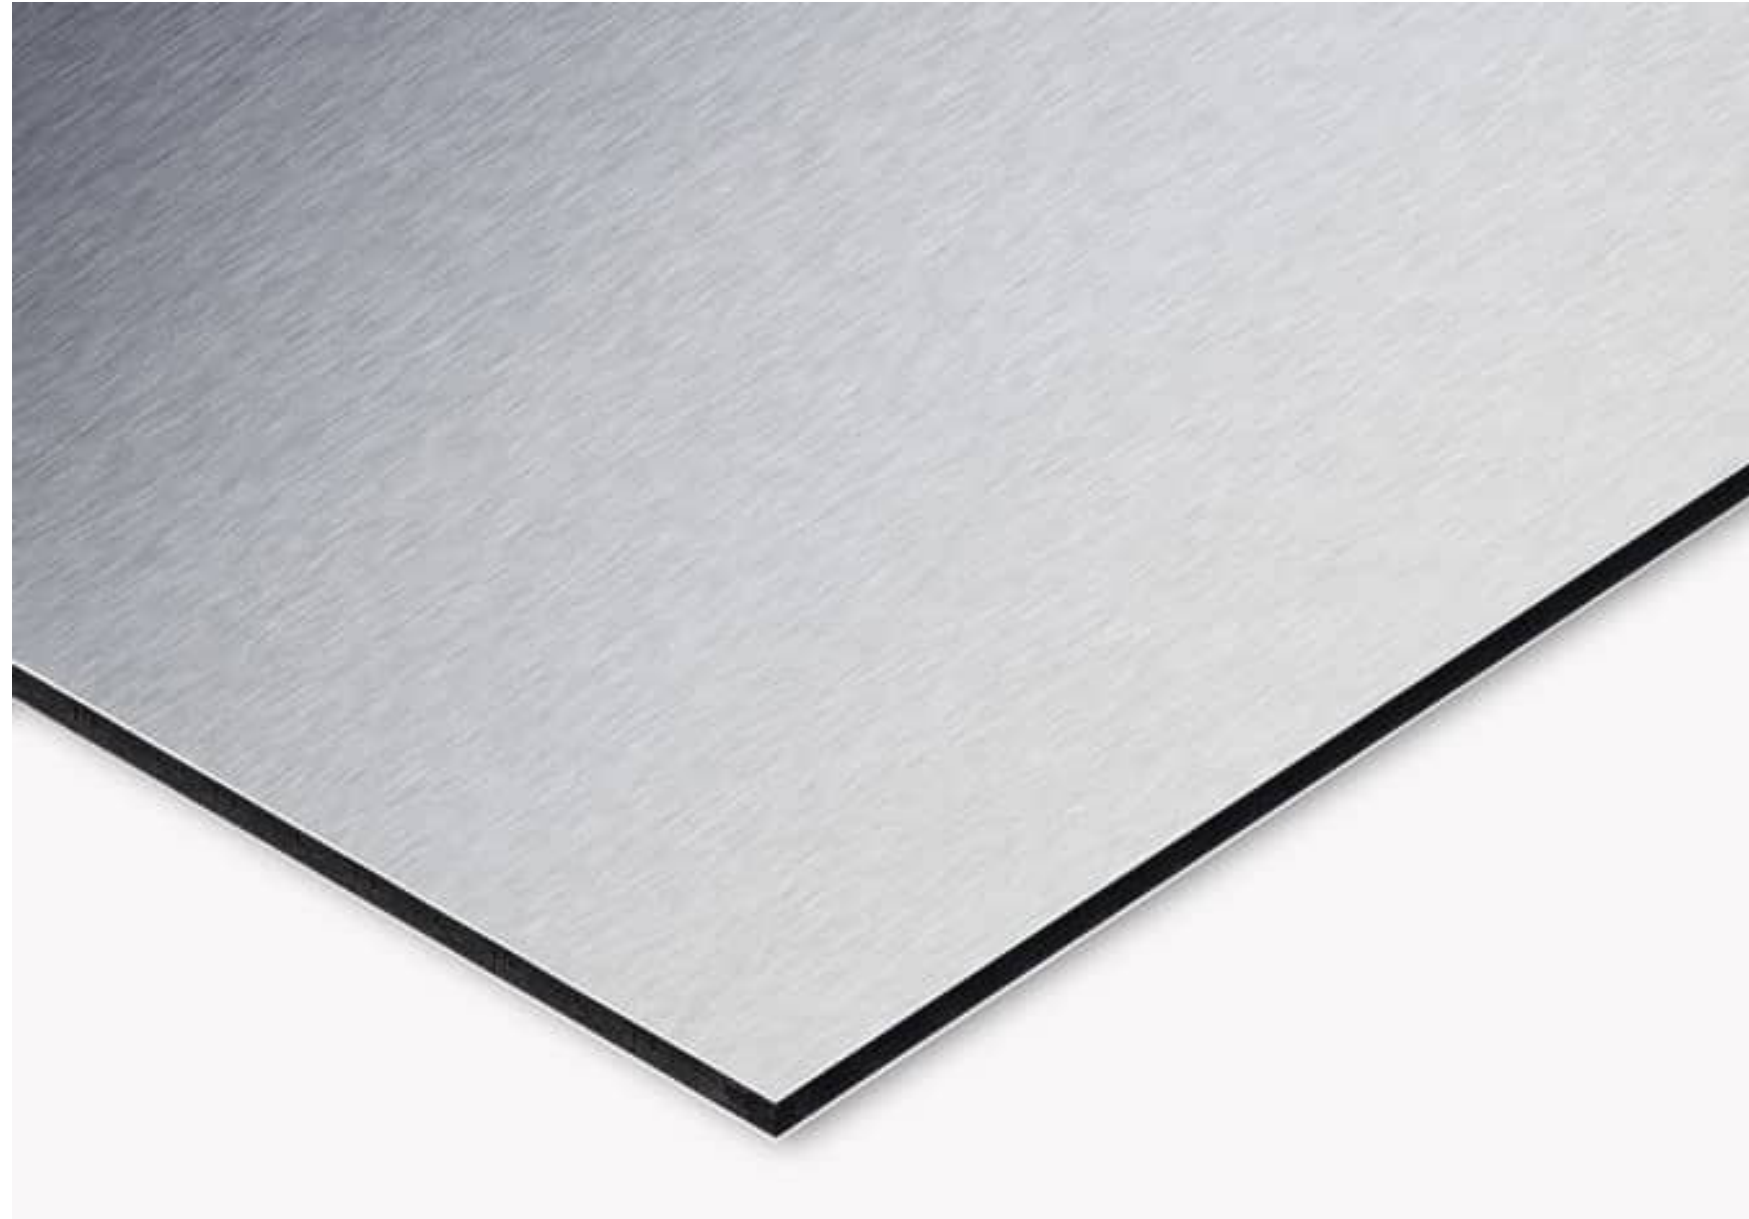

This process provides an effective finish and level of detail for imagery and text, as well as ensuring the designs withstand the 2 year lifespan of the project.

**Width:** 1422.4mm

**Height:** 1056.6mm

**Weight:** 10kg

**Projection from the fence:** ≈2cm

# Area 1: Fence Panels

The installation of the panels requires metal framing each panel and then fixing these frames to the fencing. This process has been recommended by a number of companies we enquired with.

From our research we recommend using a production company called Outdoor Display Systems. They have provided the best advice on health and safety, tamperproofing, weatherproof materials and regularly produce bespoke options, productions and installations for public spaces, heritage buildings and councils. They have recently had a installation at Coal Drops Yard in the Kings Cross area.

The frames provide security and structure. They bolted back to back on either side of the fence and are only removable with a very specific set of tools.
