I am writing to object to this application.

The photos used as supporting evidence are all recent photos which were taken after the conservation area had been cleared and hence are not an accurate representation of the what the land looked like prior to this occurring.

The conservation area has already been decimated and I don't understand why you would want to continue to do so my cutting back perfectly healthy trees?

As I'm sure you would have read in the complaints regarding the 2022/2863/P from surrounding neighbours, which is parallel to this site behind my garden wall we had a vibrant ecosystem that accommodated a thriving animal habitat where birds nested, bats, hedgehogs and foxes and their cubs thrived. For over forty years this conservation area was untouched, the foliage, trees, shrubs provided the perfect environment for them.

In July 2023, I first made the council aware that this conversation area was being cleared and hedges/ fences were being erected.

Eventually in August 2023 Oluwaseun visited the site and Blythe Smith informed me that his visit was unrelated to the application she is currently working on and she was not made aware of any other visit to the property by Camden. I was provided with no further update.

The callous and cavalier behaviour by parties engaging in these works, is and continues to destroy the conservation area. They keep changing their story but the cost is immense and your enforcement team has presided over this sordid affair since the summer. Is it not the council's job to protect the conservation area where irreversible harm is occurring, as it is here?

All I have been informed thus far is that a legal undertaking has been provided, but we don't know who the signatories are or the content of this, despite my solicitor requesting a copy of it.

I therefore do not understand how this planning application can be considered separately from the one that still needs to be submitted for the unauthorised “gazebo” that has been erected behind our garden wall?
