PARTITION WALL DESIGN DEVELOPMENT

FIRST ITERATION

- Partition meets top of balustade, concealing the staircase.
- Unsightly mechanical extract duct is left exposed.

SECOND ITERATION

- Partition meets the soffit, concealing the staircase and the mechanical extract duct.
- As the partition is not full height, there is an awkward ledge.

FINAL PROPOSAL

- Full height partition wall conceals the staircase and mechanical extract duct.
- This approach is most effective as its provides a seamless wall concealing unsightly elements.
