VERIFICATION REPORT

1 FACTUAL

1.1 INTRODUCTION

Geo-Integrity Ltd were commissioned by Haim of Entire Houze Ltd. on the 5th of December 2023 via email instruction, to undertake a verification report at 11-12 Grenville Street, WC1N 1LZ. This verification report supersedes the previous verification report undertaken by Geo-Integrity Ltd. ref. 23-10-12. The previous verification report was undertaken based solely on photographic evidence, however this verification report includes the additional testing of the basement formation level soils as requested by the Land Contamination Team at Camden.

This verification report is likely to be submitted to the Camden Council planning authority in order to discharge planning conditions in relation to planning application 2021/6078/P. As such, it describes the work undertaken to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings (and other property) and the natural and historical environment.

Previously a Phase I Desk Study and Contaminated Land Report was undertaken by Geo-Integrity ref. 21-08-12, dated January 2021. In addition, a basement impact risk assessment was undertaken by Risk Management Ltd. (ref. RML 6065) dated July 2016 which included chemical testing. Both reports identified that there may be a risk to Human Health and construction workers at the site, due to elevated lead identified within the Made Ground at the site.

In addition, it was agreed with the land contamination team of Camden that there may also be a risk of TPH and VOC's from the previous use as a domestic garage. A remedial method statement was subsequently undertaken by Geo-Integrity Ltd. (ref. 22-01-03) outlining the remedial measures required to make the site suitable for end users.

The site is centred at National Grid Reference TQ 30368 82163.

The objectives of this remedial scheme report are:-

- Briefly summarise the previous site investigation and desk study work undertaken.
- To describe all works currently undertaken.

Geo-Integrity, - 07858 367 125 Email:- murraybateman@geo-integrity.co.uk

1.2 DEVELOPMENT ON SITE

The proposed development includes the change of use of upper floor offices class (E) to residential (C3) use to provide 5 x residential units (1 x studio, 3 x 1 bed and 1 x 2 bed), demolition of existing rear garage and erection of a 2 storey 2 bed dwelling with basement, consolidation of the existing ground floor retail and cafe (E) to provide a replacement retail/restaurant (E) and installation of replacement kitchen extract plant; erection of a 1st to 3rd floor rear infill extension and external alterations to the front elevation including reopening of the side entrance door, replacement windows, shopfront and roof.

1.3 SITE SETTING

The site is located in the West-end of London, within the district of Bloomsbury, positioned along the western side of Grenville Street.

The site consists of two three storey terraced buildings intersected by Colonnade (road) trending east-west which passes through the two buildings, via a cantilevered section on the first floor.

1.4 PREVIOUS INVESTIGATION (REF. RML 6065)

1.4.1 Ground Conditions

The site and laboratory test work revealed that the general succession of strata can be represented:

Strata	Top Depth (m bgl)	Bottom Depth (m bgl)
Concrete	0.00	0.15
Made Ground	0.15	1.80
Lynch Hill Gravel Member	1.80	3.60
Weathered London Clay Formation	3.60	>6.00

Made Ground soils have been proven to a depth of 1.80m bgl by the previous investigation undertaken by Risk Management Ltd, reference RML 6065, dated July 2016.

Groundwater was not encountered during the intrusive works down to the base of the exploratory hole in excess of 6.00m bgl. Subsequent gas/groundwater monitoring also recorded no groundwater. However, it is stated perched water may occur at the base of the Lynch Hill Gravel Member during

Geo-Integrity, - 07858 367 125 Email:- murraybateman@geo-integrity.co.uk

wetter periods. Additional groundwater monitoring was undertaken in April and May 2017 which encountered groundwater at 3.70m bgl which is stated to be at least 1m below the new basement level.

1.4.2 Geo-Environmental Conditions

1.4.2.1 Soil Conditions

The previous investigation undertook a preliminary contamination assessment using the source-pathway-protection-receptor approach. Two samples of Made Ground were collected from BH1 at depths of 0.15m and 1.00m bgl. The samples were tested for a range of contaminants including heavy metals, total petroleum hydrocarbons, PAH's and BTEX and compared against limiting values for a residential without plant uptake land-use scenario. Both samples recorded single exceedances of lead. Lead was recorded at 1340mg/kg and 1380mg/kg with the relevant GAC for lead being 310mg/kg for a residential without plant uptake land-use scenario.

2 REMEDIAL MEASURES RECOMMENDED

2.1.1 Clean Cover System within Soft Landscaping Areas

Elevated lead has been encountered within the Made Ground soils and it has been established that there is a significant risk to both end users of the site, and the construction workers involved in the development of the site from the Made Ground. The main pathway of concern for these contaminants has been shown to be direct soil ingestion and dermal contact.

To break this primary exposure pathway to end site users, it was recommended a clean cover system would be required in any proposed soft landscaping areas. This cover system is not required in areas of hardstanding as this will break the pathway between impacted soils and site users.

3 VERIFICATION

The development does not include any areas of soft landscaping therefore the remedial measures stated above were not required.

Plans outlining the site boundary and development shown in Appendix A verify the site is covered entirely by hardstanding as such no remedial cover system is required.

Geo-Integrity, - 07858 367 125 Email:- murraybateman@geo-integrity.co.uk

4 FURTHER ASSESSMENT OF THE BASEMENT FORMATION SOILS

4.1 RECOMMENDATIONS BY THE CONTAMINATED LAND TEAM OF CAMDEN

The remedial method statement previously outlined requirements by the Contaminated Land Team of Camden:

- It is required when excavating the basement, a photographic record of the nature of the formation level soils must be taken.
- Furthermore, at least two samples should be taken from the formation level soils and specifically tested for TPH and VOC's. This is required due to a potential risk of vapour given the previous land-use as a domestic garage. The recorded values should be compared against the relevant GAC for residential without home-grown produce.

4.2 SITE WORK

During the excavation of the basement a photographic record was taken of the nature of the formation level soil.

The photographic record is shown in Appendix A. The photographs indicate the presence of Made Ground comprising visible fragments of brick and metal, overlying natural sand and gravel deposits interpreted to be the Lynch Hill Gravel Member. No obvious visible staining or odour was reported.

On the 7th of December 2023 a hand auger borehole was put down using an electric corer adjacent to the basement within the basement of 12 Grenville Street. Drilling through the basement of 11 Grenville Street was not possible to due existing tanking however ground conditions are anticipated to closely match those of the adjacent basement at 12 Grenville Street, including the risk of vapour ingress. A log of the ground conditions was undertaken and two samples collected from the formation level soils (Logs and photographs are included within Appendix A).

The ground conditions encountered were concrete down to 0.15m bgl, overlying granular fill down to 0.45m bgl, overlying Reworked Ground comprising soft, brown, silty, slightly gravelly clay down to the base of the exploratory hole in excess of 0.95m bgl.

4.2.1 Chemical Criteria

Geo-environmental laboratory testing was undertaken on the two selected samples within the formation level soils underlying the concrete and granular fill at depths of 0.50m and 0.90m bgl. The testing was carried out at a MCERTS and UKAS accredited laboratory. The results are presented in the Appendices.

Geo-Integrity, - 07858 367 125 Email:- murraybateman@geo-integrity.co.uk

The selected soil samples were screened against the criteria set out, to ensure the site is fit for purpose for a “Residential without the consumption of home-grown produce” land use scenario, as requested by the Contamination Land Team at Camden. All samples tested recorded concentrations below the relevant GACs, in fact all recorded below detectable limits. The results are included in the Appendices.

5 CONCLUSION

This verification report has identified the development does not include any areas of soft landscaping; therefore, the remedial cover layers were not required.

The additional testing of formation level soils requested by the Contaminated Land Team at Camden proved no significantly elevated levels of TPH or VOCs, in fact all were recorded below detectable limits. Therefore, it is considered the risk of vapours from the historical land-use as a domestic garage is very low and as such no further remedial measures will be required.

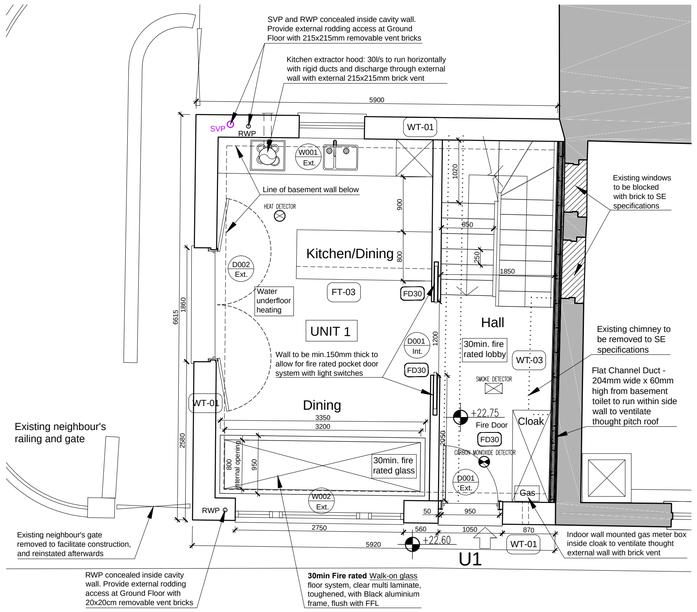
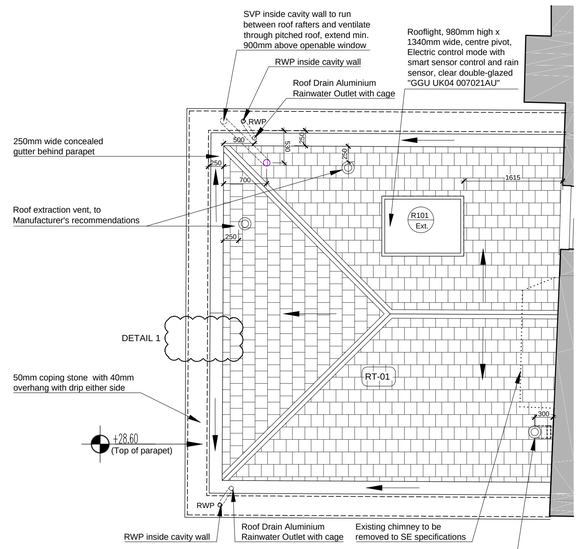
PROPOSED



Ground Floor Plan
Scale 1:50



Roof Plan
Scale 1:50

Key:

- Blockwork wall
- Brickwork wall
- RC retaining wall/slab (to SE specifications)
- Denotes insulation layer
- Denotes demolition

(See Details notes for exact wall construction)

UNDER GROUND DRAINAGE- As per specialist M&E design and specifications.

- Denotes Hot water Radiator
- Denotes Hot water chrome towel rail

Note: Slim, double-skin flat-paneled white radiators. All radiators shown in the drawings are indicative only - required quantity and size of radiators to be verified by a qualified plumber to meet the rooms heating requirements.

Key:

- Foul water drainage
- Rainwater drainage

Fire Doors Key:

FD30 Fire Door 30 min. Fire Resistant

Drainage - minimum trap, seal depths, pipes.
The drainage in this drawings is indicative only.

Drainage WC :
Seal depth 50 mm, fall 1:40, Ø100mm PVC pipe, Ø100 mm trap.
Drainage Wash Basin :
Seal depth 75 mm, fall 1:25, Ø32mm PVC pipe, Ø32 mm trap.
Drainage Shower / Bath:
Seal depth 50 mm, fall 1:25, Ø40mm PVC pipe, Ø40mm trap.
Drainage Kitchen:
Seal depth 50 mm, fall 1:25, Ø50mm PVC pipe, Ø50mm trap.
All to comply with building regulations Part H.
Foul drains 1:40, surface water drains 1:80

IMPORTANT: Contractor to assess existing drainage layout on site before tendering. All surface and foul drainage to be connected to existing manholes on site to avoid new sewer connections.

Demolition - NO walls other then walls indicated to be demolished, as indicated in the architect set to be removed.
All demolition and structural works throughout the duration of the works are to be strictly in accordance with Structural Engineer's instructions and specifications, and to the approval of Building Control.

Door nibs - All wall nibs to each side of all doors to be min. 50mm in order to allow 70mm architrave.

Boiler - New gas point and combi-boiler with flue to discharge through pitch roof.

IMPORTANT:
Electric fuse board to be installed at ground floor cloak as indicated on plans, at 1.4m from FFL, boxed and with hatch door. Contractor to liaise with Electric Board as necessary.

Kitchen- Including all worktops, appliances, extractor hood, hobs, built-in oven and microwave units, mixers, wall and base units, all beading and adjustments as per Kitchen Designer. Final kitchen layout and drainage as per kitchen designer, proposed layout is intent only.

No lights, meter boxes, flues, vents or pipes; and no telecommunications equipment, alarm boxes, television aerials, satellite dishes or rooftop 'mansafe' rails shall be fixed or installed on the external face of the building.

General Notes

Local authorities (Planning Group or Building Control) might request for additional items / information to be added / revised.

Contractor, sub-contractor or supplier is to report any errors, omission or discrepancies on the drawings, and shall not vary any work shown on the drawings without obtaining prior approval from the architect. Contractor, sub-contractor or supplier is responsible for requesting any additional information from the architect for the correct execution of the works.

Contractor, sub-contractor or supplier shall supply to the architect all shop drawings, illustrations, specifications, etc. of all specialist work to be incorporated into the main contract works, and shall immediately inform the architect if any work shown on this drawing is not in accordance with the relevant codes of practice recognised as good practice throughout the industry or if it does not comply with the relevant local authority bye-laws or building regulations.

Contractor to verify all dimensions on site before commencing any work on site or preparing any shop drawings. Figured dimensions to take precedence over scaled dimensions.

Contractor, sub-contractor or supplier shall immediately advise the architect / quantity surveyor of the effect upon programme and cost of any alterations to the proposed works shown on this drawing.

All materials, components and workmanship to comply with the relevant British Standarts, Codes of Practice and appropriate manufacturers' recommendations that from time to time shall apply.

This drawing supersseds all previous issues of the same drawing number with earlier revisions.

1,2-Dichlorobenzene	M	2790	mg/kg	0.50	< 0.50	< 0.50
2-Methylphenol	M	2790	mg/kg	0.50	< 0.50	< 0.50
Bis(2-Chloroisopropyl)Ether	M	2790	mg/kg	0.50	< 0.50	< 0.50
Hexachloroethane	M	2790	mg/kg	0.50	< 0.50	< 0.50
N-Nitrosodi-n-propylamine	M	2790	mg/kg	0.50	< 0.50	< 0.50

Results - Soil

Project: 23-12-03 11-12 Grenville Street, London

Client: Geo Integrity		Chemtest Job No.:			23-40916	23-40916
Quotation No.: Q23-33250		Chemtest Sample ID.:			1743732	1743733
		Sample Location:			HA101	HA101
		Sample Type:			SOIL	SOIL
		Top Depth (m):			0.50	0.90
		Date Sampled:			07-Dec-2023	07-Dec-2023
Determinand	**Accred.**	**SOP**	**Units**	**LOD**		
4-Methylphenol	M	2790	mg/kg	0.50	< 0.50	< 0.50
Nitrobenzene	N	2790	mg/kg	0.50	< 0.50	< 0.50
Isophorone	M	2790	mg/kg	0.50	< 0.50	< 0.50
2-Nitrophenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
2,4-Dimethylphenol	M	2790	mg/kg	0.50	< 0.50	< 0.50
Bis(2-Chloroethoxy)Methane	M	2790	mg/kg	0.50	< 0.50	< 0.50
2,4-Dichlorophenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
1,2,4-Trichlorobenzene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Naphthalene	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Chloroaniline	N	2790	mg/kg	0.50	< 0.50	< 0.50
Hexachlorobutadiene	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Chloro-3-Methylphenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
2-Methylnaphthalene	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Nitrophenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
Hexachlorocyclopentadiene	N	2790	mg/kg	0.50	< 0.50	< 0.50
2,4,6-Trichlorophenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
2,4,5-Trichlorophenol	N	2790	mg/kg	0.50	< 0.50	< 0.50
2-Chloronaphthalene	M	2790	mg/kg	0.50	< 0.50	< 0.50
2-Nitroaniline	N	2790	mg/kg	0.50	< 0.50	< 0.50
Acenaphthylene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Dimethylphthalate	M	2790	mg/kg	0.50	< 0.50	< 0.50
2,6-Dinitrotoluene	N	2790	mg/kg	0.50	< 0.50	< 0.50
Acenaphthene	M	2790	mg/kg	0.50	< 0.50	< 0.50
3-Nitroaniline	N	2790	mg/kg	0.50	< 0.50	< 0.50
Dibenzofuran	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Chlorophenylphenylether	M	2790	mg/kg	0.50	< 0.50	< 0.50
2,4-Dinitrotoluene	N	2790	mg/kg	0.50	< 0.50	< 0.50
Fluorene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Diethyl Phthalate	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Nitroaniline	N	2790	mg/kg	0.50	< 0.50	< 0.50
Azobenzene	M	2790	mg/kg	0.50	< 0.50	< 0.50
4-Bromophenylphenyl Ether	M	2790	mg/kg	0.50	< 0.50	< 0.50
Hexachlorobenzene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Phenanthrene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Anthracene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Carbazole	M	2790	mg/kg	0.50	< 0.50	< 0.50
Di-N-Butyl Phthalate	N	2790	mg/kg	0.50	< 0.50	< 0.50
Fluoranthene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Pyrene	M	2790	mg/kg	0.50	< 0.50	< 0.50
Butylbenzyl Phthalate	N	2790	mg/kg	0.50	< 0.50	< 0.50

Test Methods

SOP	Title	Parameters included	Method summary
2030	Moisture and Stone Content of Soils(Requirement of MCERTS)	Moisture content	Determination of moisture content of soil as a percentage of its as received mass obtained at <37°C.
2040	Soil Description(Requirement of MCERTS)	Soil description	As received soil is described based upon BS5930
2670	Total Petroleum Hydrocarbons (TPH) in Soils by GC-FID	TPH (C6–C40); optional carbon banding, e.g. 3-band – GRO, DRO & LRO*TPH C8–C40	Dichloromethane extraction / GC-FID
2760	Volatile Organic Compounds (VOCs) in Soils by Headspace GC-MS	Volatile organic compounds, including BTEX and halogenated Aliphatic/Aromatics.(cf. USEPA Method 8260)*please refer to UKAS schedule	Automated headspace gas chromatographic (GC) analysis of a soil sample, as received, with mass spectrometric (MS) detection of volatile organic compounds.
2790	Semi-Volatile Organic Compounds (SVOCs) in Soils by GC-MS	Semi-volatile organic compounds(cf. USEPA Method 8270)	Acetone/Hexane extraction / GC-MS

Report Information

Key

U	UKAS accredited
M	MCERTS and UKAS accredited
N	Unaccredited
S	This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
SN	This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
T	This analysis has been subcontracted to an unaccredited laboratory
I/S	Insufficient Sample
U/S	Unsuitable Sample
N/E	not evaluated
<	"less than"
>	"greater than"
SOP	Standard operating procedure
LOD	Limit of detection

Comments or interpretations are beyond the scope of UKAS accreditation
The results relate only to the items tested
Uncertainty of measurement for the determinands tested are available upon request
None of the results in this report have been recovery corrected
All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis
All Asbestos testing is performed at the indicated laboratory
Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Sample Deviation Codes

A - Date of sampling not supplied
B - Sample age exceeds stability time (sampling to extraction)
C - Sample not received in appropriate containers
D - Broken Container
E - Insufficient Sample (Applies to LOI in Trommel Fines Only)

Sample Retention and Disposal

All soil samples will be retained for a period of 30 days from the date of receipt
All water samples will be retained for 14 days from the date of receipt
Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:
customerservices@chemtest.com
