

Design Statement of Works

Organisation	
Company Name	London Mathematical Society
Phone Number	07939888875
Email Address	andrew.dorward@lms.ac.uk
Address	De Morgan House, 57-58 Russell Square, London, WC1B4HS

PROJECT NAME	
Name	External Platform Lift Installation (57 Russell Square)
Description	The proposed installation of x1 platform lift in the front external lightwell area of 57 Russell Square to enhance accessibility for individuals with disabilities, providing seamless vertical mobility from ground to lower ground floor. This design prioritises inclusivity, ensuring a safe and efficient lift system that seamlessly integrates with the architectural aesthetics of the building while adhering to all relevant accessibility standards and regulations. See diagram J6263 - A lift motor will be housed within a side shaft (colour: Black in keeping with the colour of the building railings) along the staircase wall, with a cantilever platform which will move vertically. The platform will have two laminated glass framed gates for access at the upper and lower floors. Due to a previous platform lift being granted and installed in 2005 (this was removed several years later) the front building railings have already been adapted to accommodate an access gate which is still in place (see diagram 'Current Elevation' and photos). On the lower ground floor level there is an entrance door to the building which does not require adapting.
