Land Contamination Desk Study Appendix D Unexploded Ordnance Information

# **UNEXPLODED BOMB RISK MAP**

# SITE LOCATION

Location: NW1 8EH, Map Centre: 528297.184302

# London Bomb Risk | Image: miltary | Ima

# How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment\* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment\* is necessary.

# Relative UXB risk across London

The relative risk for the London area is established by plotting the recorded bombing densities.

These are represented as counts of high explosive bombs in km2 area. The areas coloured green represent a record of less than 10 bombs per km2.

Compared to other areas of the UK, this still represents a significant density. However, this is much lower than parts of Central London, where the red colouration indicates in excess of 150 bombs falling per km2, representing a very significant bombing density.

# What do I do if my site is in a moderate or high density area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites with a moderate or high bombing density.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything? If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)** 

If I have any questions, who do I contact?

tel: +44 (0) 1993 886682 email: uxo@zetica.com web: www.zeticauxo.com

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: (https://zeticauxo.com/downloads-and-resources/risk-maps/)

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

\*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

Pre-Desk Study Assessment			
Site:	100 Chalk Farm, Chalkfarm, London		
Client:	Pell Frischmann		
Contact:	Samara Hyde		
Date:	25 <sup>th</sup> October 2022		
Pre-WWI Military Activity on or Affecting the Site	None identified.		
WWI Military Activity on or Affecting the Site	None identified.		
WWI Strategic Targets (within 5km of Site)	<ul> <li>The following strategic targets were located in the vicinity of the Site:</li> <li>Docks, wharves, and warehouses along the River Thames.</li> <li>Transport infrastructure and public utilities.</li> <li>Industries important to the war effort, including munitions factories, aircraft manufacturing, chemical, engineering, and metal works.</li> <li>Military barracks, camps, and training areas.</li> <li>Anti-Aircraft (AA) guns.</li> </ul>		
WWI Bombing	None identified on the Site.		
Interwar Military Activity on or Affecting the Site	None identified.		
WWII Military Activity on or Affecting the Site	None identified.		
WWII Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site:  □ Docks, wharves, and warehouses along the River Thames.  □ Transport infrastructure and public utilities.  □ Industries important to the war effort, including aircraft manufacturing, chemical, engineering, and metal works.  □ Military barracks, camps, and training areas.  □ AA and anti-invasion defences.		
WWII Bombing Decoys (within 5km of Site)	None.		
WWII Bombing	During WWII the Site was located in the Metropolitan Borough (MB) of St Pancras, which officially recorded 663No. High Explosive (HE) bombs with a bombing density of 246.1 bombs per 405 hectares (ha). Readily available records have been found to indicate that several HE bombs fell in close proximity to the Site.		
Post-WWII Military Activity on or Affecting the Site	None identified.		
Recommendation	It is recommended that a detailed desk study is commissioned to assess, and potentially zone, the Unexploded Ordnance (UXO) hazard level on the Site.		
Further information	For information about Zetica's detailed UXO desk studies and other UXO services, please visit our website: <a href="https://www.zeticauxo.com">www.zeticauxo.com</a> .  Details and downloadable resources covering the most common sources of UXO hazard affecting sites in the UK can be found <a href="https://www.zeticauxo.com">here</a> .  If you have any further queries, please don't hesitate to get in contact with us at <a href="https://www.zetica.com">wxo@zetica.com</a> or 01993 886 682.		

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary.

It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further in-depth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.
