Appendix A: Phase I Desk Study

Appendix B: Factual Report

Appendix C: Ground Movement Assessment

Appendix D: Structural Engineer's Report

1. Non-Technical Summary

- 1.1.1. The site location is at 45-54 Saffron Hill and 3 Saffron Street, London, EC1M 3JY.
- 1.1.2. The site currently comprises an eight-storey car park and office building with a lower ground floor. The top two floors are used as office spaces while the bottom six are used as a car park.
- 1.1.3. A basement construction sequence document has been prepared by HTS, which outlines the proposed basement construction sequence in full, and is included as Appendix D.
- 1.1.4. It is understood that the bulk excavation works and the construction of permanent works elements will take place before the installation of the ground floor slab, i.e. utilising a *bottom-up* methodology.
- 1.1.5. The following assessments are presented in the current document:
- Screening.
 - Scoping.
 - Additional evidence/assessments (as required), including:
 - Architectural and structural drawings.
 - Ground movement assessment.
 - Basement impact assessment.
- 1.1.6. The ground conditions beneath the site comprise (based on a review of BGS data and site-specific ground investigation):
- Made Ground: The Made Ground is expected to be at least 3.40m thick.
 - Weathered London Clay Formation: The Weathered London Clay Formation is expected to be at least 1.70m thick.
 - London Clay Formation: The London Clay Formation is expected to be at least 7.95m thick.
 - Lambeth Group - Upper Mottled Beds - Upper Mottled Beds is expected to be at least 7.05m thick.
 - Lambeth Group - Laminated Beds - Laminated Beds is expected to be at least 1.00m thick.
 - Lambeth Group – Upper Shelly Beds - Upper Shelly Beds is expected to be at least 1.00m thick.
 - Lambeth Group – Lower Mottled Beds - Lower Mottled Beds is expected to be at least 3.00m thick.
- 1.1.7. The hydrogeological conditions at the site, relevant to the proposed development, are predicted to comprise:
- Finite volumes of perched water may be present above the London Clay in the Made Ground. No perched water was encountered during site-specific works.
 - The pore water pressure distribution within the London Clay Formation is likely hydrostatic.
 - The dominant direction of groundwater flow (if encountered) is anticipated to be in a southern direction, towards the River Thames.
- 1.1.8. The BIA has assessed land stability, and the impacts of the proposed development on neighbouring structures will be limited to Category 1 – Very Slight, in accordance with the Burland Scale. The impact to the adjacent public highway to the front of the property is also considered to be low, based on movements predicted in the ground movement assessment.
- 1.1.9. The BIA has identified a subterranean (groundwater) flow and stability issue. A lost river of London, the River Fleet, is mapped approximately 25m to the east of the site boundary. The site-specific ground investigation undertaken on site indicates that the London Clay Formation is present directly below the site and it is classified as an Unproductive Aquifer. The

hydrogeological regime of the site and surrounding areas is not anticipated to comprise significant groundwater flow, and any damming effects are likely to comprise minor increases in groundwater head.

- 1.1.10. The BIA has identified a stability issue. The London Clay Formation is the shallowest stratum on site. The new raft foundations and any piles proposed to be reused will be founded at depth, limiting the impact of shrink-swell subsidence on the development.

2. Introduction

2.1. Overview

- 2.1.1. A2 Site Investigation Limited (A2SI) was engaged by Saffron Hill Investment Holdings Limited to prepare a Basement Impact Assessment (BIA) for the proposed works at the Saffron Hill site, located in the London.
- 2.1.2. The purpose of this assessment is to consider the potential effects of the proposed works 45-54 Saffron Hill and 3 Saffron Street, London, EC1M 3JY, on the local hydrology, geology and hydrogeology, and the potential impacts to neighbours and the wider environment.
- 2.1.3. The location of the proposed development is shown in Figure 2.1.

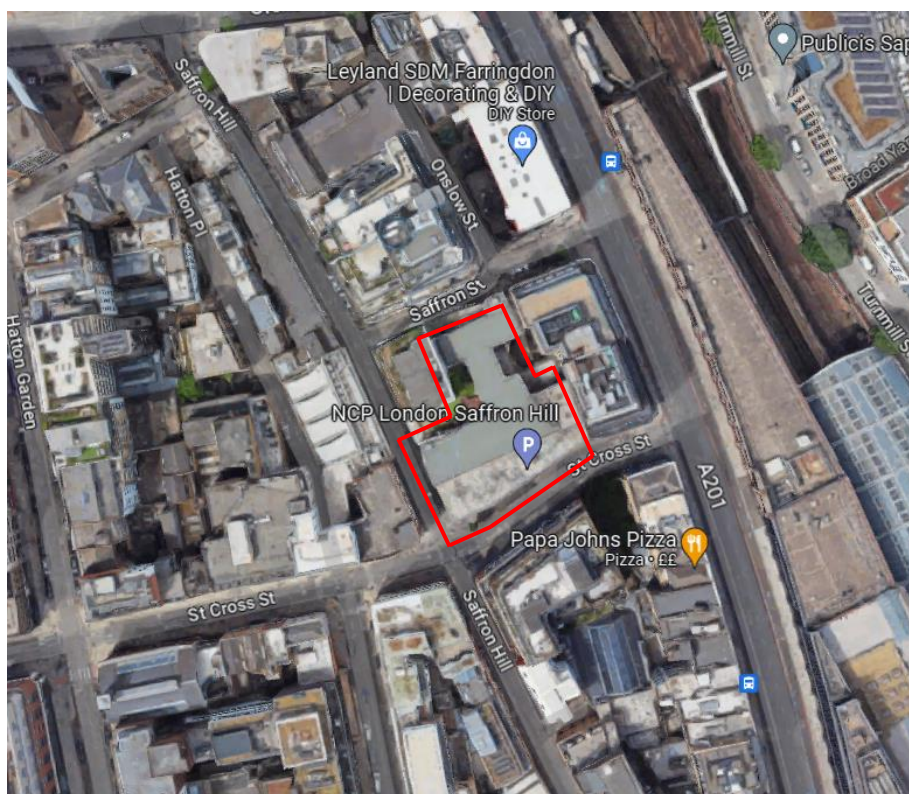

Figure 2.1 Location of the proposed development (red line reflects the site boundary used for this assessment)

- 2.1.4. The development site is located within the administrative boundary of the London Borough of Camden.
- 2.1.5. The BIA has followed the approach developed by the London Borough of Camden, which is considered to represent current industry best practice.
- 2.1.6. The BIA comprises the following elements:
- Screening.
 - Scoping.
 - Additional evidence / assessments (as required), including:
 - Architectural and structural drawings.

- Ground movement assessment (GMA).
- Basement impact assessment.

2.2. Credentials

- 2.2.1. The BIA has been reviewed by Hamed Shariff. Hamed is a Chartered Member of the Institution of Civil Engineers (MICE) with several years of experience in geotechnical design, hydrogeological assessment and construction of basements. Hamed is currently an Associate at A-squared Studio Engineers Ltd (A-squared) and has a Master in Engineering from University College London. He also heads the hydrogeological division of A-squared and has experience in groundwater flow modelling and impact reviews.
- 2.2.2. The BIA has been approved by Alex Nikolic. Alex is a Chartered Member of the Institution of Civil Engineers (MICE) with more than 20 years of industry experience in geotechnical design and construction of ground engineering works. Alex has attained post-graduate qualifications, including a Master of Science in Soil Mechanics (MSc DIC) from the Imperial College London and a Master of Studies (MSt Cantab) in Sustainable Development from the University of Cambridge. Alex was formerly the Director of Ground Engineering at Buro Happold Ltd.

2.3. Sources of Information

- 2.3.1. The following baseline data has been referenced to complete the BIA in relation to the proposed development:
- *Envirocheck Report* for Saffron Hill, 14 St Cross Street prepared by Landmark Information Group Limited, dated September 2023 (ref. 317364146_1_1).
 - *Phase I Desk Study* prepared by A2SI, dated October 2023 (ref. 38823-A2SI-XX-XX-RP-X-0001-00), included as Appendix A.
 - *Factual Report* prepared by A2SI, dated November 2023 (ref. 38823-A2SI-XX-XX-RP-X-0002-00), included as Appendix B.
 - *Interpretive Report* prepared by A2SI, dated November 2023 (ref. 38823-A2SI-XX-XX-RP-Y-0003-01).
 - *Building Damage Ground Movement Assessment* prepared by A2SI, dated December 2023 (ref. 38823-A2SI-XX-XX-RP-Y-0005-00).
 - *Foundation Reuse Assessment* prepared by A2SI, dated December 2023 (ref. 38823-A2SI-XX-XX-RP-Y-0006-00).
 - Various architectural and structural drawings provided by the project team.
 - *Stage 1 Preliminary UXO Risk Assessment for 14 St Cross Street, London prepared by Brimstone*, dated September 2023 (ref. PRA 23-2257).
 - British Geological Survey, GeoIndex Onshore GIS database (accessed 27th September 2023); <https://mapapps2.bgs.ac.uk/geoindex/>.
 - Department for Environment, Food & Rural Affairs (DEFRA), Magic Map Application (accessed 27th September 2023); <http://magic.defra.gov.uk/MagicMap.aspx>.

- Local authority planning portal (ref. <https://www.camden.gov.uk/search-for-planning-applications>), accessed 27th September 2023.

2.4. Existing Development

- 2.4.1. The development site is located at 45-54 Saffron Hill and 3 Saffron Street, EC1M 3JY. The approximate National Grid reference for the site is 531430, 181950 and the site footprint covers approximately 0.15 hectares.
- 2.4.2. The approximate ground surface elevations at the site ranges between 13m and 15m (in the southeast and northwest corner respectively) above Ordnance Datum causing the site to have a gentle slope down to the east. Ground surface levels in the surrounding area fall towards the south.
- 2.4.3. As shown in Figure 2.1, the site is currently occupied by a multi-storey car park and office space comprised of eight stories with a lower ground floor. The top two floors are used as office spaces while the bottom six are used as a car park.
- 2.4.4. The current structure is a reinforced concrete frame and is supported by pile foundations. Both straight-shaft and underream piles are present below column locations.
- 2.4.5. The existing lower ground floor is supported by reinforced concrete retaining walls.

2.5. Neighbouring Properties and Infrastructure

- 2.5.1. The northern boundary of the site comprises Saffron Street, while the eastern boundary of the site comprises a multi-storey office space building. The southern boundary of the site comprises St Cross Street and the western boundary of the site comprises Saffron Hill and a multi-storey residential building.
- 2.5.2. Asset owners with existing underground services that may be impacted by the proposed development include the following:
- London Borough of Camden and the Greater London Authority.
 - Thames Water Ltd – Clean water and wastewater.
 - BT (BT Group Plc) and Virgin Media Ltd – Telecoms.
 - UK Power Networks Ltd – Electricity distribution.
 - Cadent Gas Ltd and Southern Gas Networks Plc – Gas.
- 2.5.3. Asset protection teams for the assets listed in 2.5.2 may require engagement as the design of the proposed development continues. Where necessary, separate GMAs may be required to meet design assurance requirements.

2.6. Proposed Development

- 2.6.1. The proposed development Structural Engineers Report is included in Appendix D.
- 2.6.2. The development is planned for office use.
- 2.6.3. The proposed development will include the demolition of the existing structure and the construction of a new 9-storey commercial office building with a lower ground floor and a basement. The basement is proposed to take a rectangular shape located at the centre of the site footprint. The proposed basement is to be constructed to a maximum depth of 5.5m bgl.
- 2.6.4. The existing piles are to be cut down to allow for the proposed development of the new basement and raft solution over. The existing piles will be reused where possible and where beneficial for raft performance and, in areas of high loading, new piles

may be incorporated into the design. Proposed plans of the basement and lower ground floor are presented in Figure Figure 2.2 and Figure 2.3.

Source: HTS.

Note: Locations of the proposed underpins, secant pile retaining walls and battered excavation marked in blue, magenta and orange respectively.

Figure 2.2 Proposed basement plan

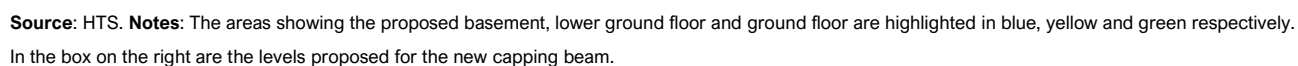

Figure 2.3 Proposed lower ground floor plan

3. Desk Study

- 3.1.1. A *Phase I Desk Study* report has been undertaken by A2 Site Investigation Limited for the project. The Desk Study report has been used to inform this BIA.
- 3.1.2. The Desk Study informs further actions in relation to ground contamination risks. It is provided in Appendix A.

4. Screening

4.1. Subterranean (Groundwater) Flow, Screening Flowchart

Question	Response	Details
1a. Is the site located directly above an aquifer?	No	Although BGS 1:50,000 geological mapping shows that the site is located above the Hackney Gravel Members superficial deposit, no gravels were encountered during site-specific ground investigation. The site is underlain by London Clay Formation which is classified as an Unproductive Aquifer, defined as low permeability stratum which is not considered to retain significant quantities of groundwater.
1b. Will the proposed basement extend beneath the water table surface?	No	The proposed basement is to be constructed to a maximum level of 4.27mOD (5.73m below the recommended short-term design water table) and although the London Clay Formation likely has a hydrostatic profile, it is an Unproductive Aquifer.
2. Is the site within 100m of a watercourse, well (used / disused) or potential spring line?	Yes	The nearest watercourse is a lost river of London, the River Fleet, which is mapped approximately 25m to the east of the site boundary. River Thames is present approximately 1.1km to the south of the site boundary.
3. Is the site within the catchment of the pond chains on Hampstead Heath?	No	The site is not located within the catchment of the pond chains on Hampstead Heath.
4. Will the proposed basement development result in a change in the proportion of the hard surfaced / paved areas?	No	The basement excavation is proposed below the existing lower ground floor and generally follows the existing building footprint. Hence there are no changes to the paved areas.
5. As part of the site drainage, will more surface water (e.g. rainfall and run-off) than at present be discharged to the ground (e.g. via soakaways and / or SUDS)?	No	The proposed development will maintain the existing surface water discharge conditions.
6. Is the lowest point of the proposed excavation (allowing for any drainage and foundation space under the basement floor) close to, or lower than, the mean water level in any local pond (not just the pond chains on Hampstead Heath) or spring line?	No	The lowest level of the below ground space is not lower than the mean water level in any local pond.

4.2. Stability Screening Flow Chart

Question	Response	Details
1. Does the existing site include slopes, natural or man-made, greater than 7 degrees (approximately 1 in 8)?	No	The topographic survey shows that, in the area of the development site, there is a slope angle that generally is less than 7 degrees.
2. Will the proposed re-profiling or landscaping at the site change slopes at the property boundary to more than 7 degrees (approximately 1 in 8)?	No	There are no re-profiling / landscaping works proposed that will increase the slopes existing on site to gradients greater than 7 degrees.
3. Does the development neighbour land, including railway cuttings and the like, with a slope greater than 7 degrees (approximately 1 in 8)?	No	The areas surrounding the site is founded on a slope with a gradient less than 7 degrees.

Question	Response	Details
4. Is the site within a wider hillside setting in which the general slope is greater than 7 degrees (approximately 1 in 8)?	No	Figures 16 of the Camden GHHS shows that within the immediate vicinity of the site (approximately 100m in each direction), the ground has a general slope less than 7 degrees.
5. Is the London Clay the shallowest strata at the site?	Yes	The site-specific ground investigation borehole data reviewed proves that the London Clay Formation is present directly underneath the Made Ground.
6. Will any trees be felled as part of the development and/or are any works proposed within any tree protection zones where trees are to be retained?	No	No trees will be felled during the works. No works are proposed within tree protection zones.
7. Is there a history of seasonal shrink-swell subsidence in the local area and/or evidence of such effects at the site?	No	The London Clay strata is usually classified as having a high volume change potential and hence can lead to seasonal shrink-swell subsidence where buildings are founded in desiccated soils. However, there is no specific evidence of subsidence having been experienced on site or in the immediate surrounding area.
8. Is the site within 100m of a watercourse or a potential spring line?	Yes	The nearest watercourse is a lost river of London, the River Fleet, which is mapped approximately 25m to the east of the site boundary. River Thames is present approximately 1.1km to the south of the site boundary.
9. Is the site within an area of previously worked ground?	No	BGS 1:50,000 geological mapping does not show the site to be located in an area of previously worked ground. Historical maps do not show any evidence of worked ground.
10. Is the site within an aquifer? If so, will the proposed basement extend beneath the water table such that dewatering may be required during construction?	No	No water was encountered during the monitoring visits and although the London Clay Formation likely has a hydrostatic profile, it is an unproductive stratum. Dewatering will likely not be required during construction.
11. Is the site within 50m of the Hampstead Heath Ponds?	No	The site is not within 50m of the Hampstead Heath Ponds.
12. Is the site within 5m of a highway or pedestrian right of way?	Yes	The site is within 5m of a pedestrian sidewalks and roads. The site is bounded by St Cross Street to the south, Saffron Hill to the west and Saffron Street to the north.
13. Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?	Yes	The differential depth of the foundations of the existing development relative to neighbouring properties will be significantly increased. The maximum increase in foundation depth is 9.23m.
14. Is the site over (or within the exclusion zone of) any tunnels, e.g. railway lines?	No	There are no tunnels in close proximity to the site. The east of the site is within 35m of the LUL Zone of influence (Metropolitan Line).

4.3. Surface Water and Flooding Screening Flowchart

Question	Response	Details
1. Is the site within the catchment of the ponds chains on Hampstead Heath?	No	The site is not located within the catchment of the pond chains on Hampstead Heath.

Question	Response	Details
2. As part of the proposed site drainage, will surface water flows (e.g. volume of rainfall and peak run-off) be materially changed from the existing route?	No	The proposed development will maintain the existing surface water discharge conditions.
3. Will the proposed basement development result in a change in the proportion of hard surfaced / paved external areas?	No	The new below ground space / basement excavation is proposed across the majority of the site footprint. Hence there are no changes to the paved areas.
4. Will the proposed basement result in changes to the profile of the inflows (instantaneous and long-term) of surface water being received by adjacent properties or downstream watercourses?	No	The proposed basement is not anticipated to change the surface water discharge from the property. Surface water attenuation methods, such as green roofs, will be likely proposed to manage the discharge.
5. Will the proposed basement result in changes to the quality of surface water being received by adjacent properties or downstream watercourses?	No	No change in surface water quality is anticipated.
6. Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature?	No	The site is in an area with very low risk of flooding due to surface water.

4.4. Non-Technical Summary of Screening Process

4.4.1. The screening process identifies the following issues to be carried forward to scoping for further assessment:

- A lost river of London, the River Fleet, is mapped approximately 25m to the east of the site boundary (4.1[2], 4.2[8]).
- London Clay Formation is the shallowest stratum on site. (4.2[6]).
- Three single carriageway roads, St Cross Street, Saffron Hill and Saffron Street, are present directly to the south, the west and the north of the site, respectively (4.2[12]).
- The proposed basement excavation will increase the differential depth of foundations relative to neighbouring properties (4.2[13]).

4.4.2. The other potential concerns considered within the screening process have been demonstrated to be not applicable or not significant when applied to the proposed development.

5. Scoping

5.1. Subterranean (Groundwater) Flow and Stability: The site is within 100m of the Lost River Fleet

Hazards

- 5.1.1. The groundwater regime in close proximity to the site is influenced by the River Fleet.

Potential Impacts

- 5.1.2. Increase or decrease in the flow from the watercourses caused by the proposed basement.
- 5.1.3. Changes in groundwater head of the watercourses resulting in stress changes or slope instability within the ground.
- 5.1.4. Ground movements associated with the stress changes in the ground causing damage to existing properties.

Mitigating Factors

- 5.1.5. A site-specific ground investigation undertaken on site indicates that the London Clay Formation is present directly below the site and it is classified as an Unproductive Aquifer.
- 5.1.6. The hydrogeological regime of the site and surrounding areas is not anticipated to comprise significant groundwater flow, and any damming effects are likely to comprise minor increases in groundwater head.

Assessments and Further Actions

- 5.1.7. The presence of any below-ground structures or basements underneath the neighbouring properties should be confirmed to determine the risk of groundwater flooding or significant movement due to stress changes in the ground.

5.2. Stability: London Clay is the shallowest stratum on site

Hazards

- 5.2.1. Seasonal shrinking and swelling (subsiding and heaving) of the London Clay Formation underneath the site.

Potential Impacts

- 5.2.2. Damage to the existing foundation system / proposed retention systems and neighbouring properties.

Mitigating Factors

- 5.2.3. The new raft foundations and any piles proposed to be reused will be founded at depth, limiting the impact of shrink-swell subsidence on the development.

Assessments and Further Actions

- 5.2.4. Seasonal shrink-swell of the London Clay Formation will be considered as part of the design of foundations.

- 5.3. **Stability:** The site is bounded by public roads to the immediate south, west and north and the proposed works will increase the differential depth of foundations relative to the neighbouring properties

Hazards

- 5.3.1. The southern, western and northern part of the site boundary are immediately adjacent to “St Cross Street”, “Saffron Hill” and “Saffron Street” which are single-carriageway roads with pedestrian sidewalks.
- 5.3.2. The differential depth of the foundations relative to neighbouring properties will increase.
- 5.3.3. Two residential building (75 and 77-79 Farringdon Road) are located adjacent to the eastern site boundary and another residential building (55-59 Saffron Street) is located adjacent to the western site boundary.

Potential Impacts

- 5.3.4. Impact of ground movement to St Cross Street resulting in cracking, damage and/or collapse.
- 5.3.5. Impact of ground movement to Saffron Hill resulting in cracking, damage and/or collapse.
- 5.3.6. Impact of ground movement to Saffron Street resulting in cracking, damage and/or collapse.
- 5.3.7. Impact of ground movement to 75 Farringdon Road resulting in cracking, damage and/or collapse.
- 5.3.8. Impact of ground movement to 77-79 Farringdon Road resulting in cracking, damage and/or collapse.
- 5.3.9. Impact of ground movement to 55-59 Saffron Street resulting in cracking, damage and/or collapse.
- 5.3.10. Impact to adjacent roads resulting in cracking and/or damage.
- 5.3.11. Collapse of the excavation and associated impact on surrounding assets.

Mitigating Factors

- 5.3.12. Deposits underlying the development are largely natural and anticipated to be relatively stable, i.e. London Clay.
- 5.3.13. Several basements of similar depth and scale have been successfully constructed throughout London within similar geological conditions and urban settings.
- 5.3.14. Temporary propping of the underpins, pile walls and excavation will be proposed during construction works to ensure no significant movements or instability of the surrounding roads arise.

Assessments and Further Actions

- 5.3.15. A ground movement assessment has been performed to determine the impact of proposed excavation works on the neighbouring properties, discussed in Section 8.2. The assessment predicts a maximum impact classification of Category 1 – Very Slight for the neighbouring properties, in accordance with the Burland Scale.
- 5.3.16. An assessment of the ground movements of the neighbouring road associated within the proposed works may be required as part of the detailed design to confirm that there is no significant impact during construction. The local authority would determine whether any ground movement assessments are required for the neighbouring roads.

- 5.3.17. Various additional ground movement assessments may be required to determine the impact of the works on surrounding buried utilities and other third-party assets surrounding the site. These assessments should confirm anticipated impact categories in accordance with performance limits set by the relevant third-party asset protection teams.
- 5.3.18. Appropriate ground movement monitoring should be implemented during construction to assess the performance of the earth retention system (baseline monitoring pre-commencement of the works should be carried out to determine any potential existing movement trends).

6. Site Investigation

- 6.1.1. A site-specific ground investigation was carried out in October 2023 by A2SI to support the design of the proposed below-ground space.
- 6.1.2. The *Factual Report* prepared by A2SI summarising the works undertaken is included as Appendix B.
- 6.1.3. The investigative works included the following:
- 2 No. modular cable percussion boreholes; 1 No. to 25.00 m bgl and 1 No. to 3.10m bgl due to refusal in mass concrete.
 - 2 No. boreholes are located close to pile locations to identify pile underreams.
 - 3 No. dynamic sampling boreholes up to 3.00m bgl (with an additional 4no shallow refusals).
 - 3 No. combined machine excavated and hand-dug trial pits to investigate pile cap and pile dimensions, and pile sample.
 - 3 No. standpipe installations within the boreholes for ground gas and groundwater monitoring.
 - 1 No. geophysical installations for the purpose of parallel seismic and magnetometer testing.
 - 3 No. gas and groundwater monitoring standpipe installations.
 - 3 No. return ground gas and groundwater monitoring rounds.
 - 23 No. standard penetration tests (SPTs).
 - 10 No. moisture content tests.
 - 10 No Atterberg Limits tests.
 - 9 No. unconsolidated undrained (UU) 100mm-diameter triaxial compression tests.
 - 3 No. BRE Special Digest 1 Suite D tests.
 - 5 No. Soil Organic Matter (SOM).
 - 5 No. Total Organic Carbon (TOC).
 - 5 No. Fraction Organic Carbon (FOC).
 - 5 No. pH.
 - 5 No. Water soluble sulphate.
 - 5 No. Total Petroleum Hydrocarbons Criteria Working Group (TPH CWG) including Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) and Methyl Tert-Butyl Ether (MTBE).
 - 5 No. Speciated Polyaromatic Hydrocarbons (PAHs) (EPA16).
 - 5 No. Asbestos ID (with quantification if asbestos identified).
 - 5 No. Heavy Metals and Metalloids Suite.
 - 1 No. Speciated Volatile Organic Compounds (VOC) suite.
 - 1 No. Polychlorinated Biphenyls (PCBs) (WHO12), and
 - 2 No. Waste Acceptance Criteria (WAC) suites.

- 6.1.4. The locations of the ground investigation positions are shown in Figure 6.1.
- 6.1.5. The encountered ground conditions at the site are summarised in Table 6.1.
- 6.1.6. During the intrusive investigation groundwater seepages were recorded in BH02 at 9.30 and 10.30mbgl within the London Clay Formation. A groundwater strike was recorded at 13.30mbgl within the Lambeth Group – Upper Mottled Beds.
- 6.1.7. Groundwater level gauging has been carried out on three occasions: November 8th, 15th and 21st 2023. Groundwater was not encountered in the monitoring wells in the Made Ground stratum during the monitoring visits.

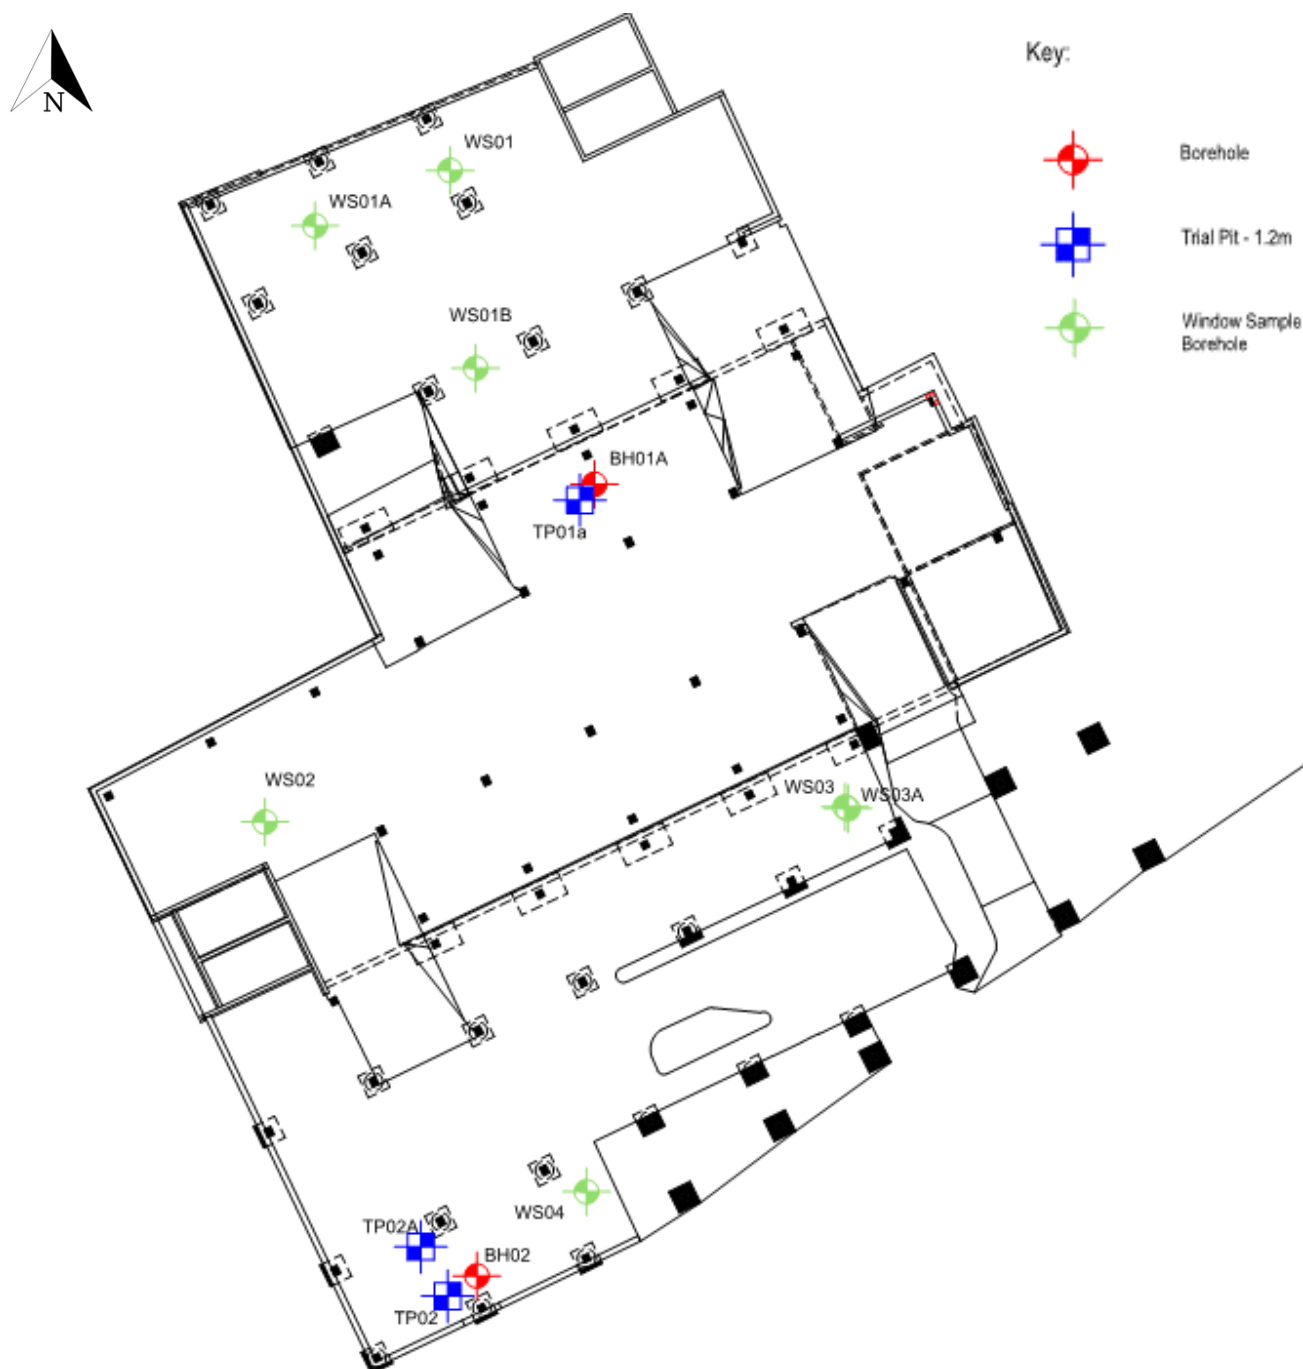

Figure 6.1 Exploratory hole locations

Cobbles are angular to sub-angular fine to coarse of flint, brick and occasional black carbonaceous fragments.</p>
Weathered London Clay Formation	+11.08	+8.70	1.03	5.00	1.70	Firm brown and grey mottled sandy silty CLAY with frequent pockets of orangish brown fine and medium sand. Sand is fine and medium.
London Clay Formation	+8.70	+0.75	5.00	12.90	7.95	Firm extremely closely fissured brownish grey to brown mottled grey sandy silty CLAY with rare light grey bioturbations (generally <5mm) and rare pockets (<5mm) of soft black organic. Sand is fine.
Lambeth Group: Upper Mottled Beds	+0.75	-6.30	12.95	20.00	7.05	Stiff light bluish grey and brown mottled sandy silty CLAY. Sand is fine and medium.
Lambeth Group: Laminated Beds	-6.30	-7.30	20.00	21.00	1.00	Stiff extremely closely to closely fissured dark grey slightly sandy silty CLAY with frequent light grey partings of silt.
Lambeth Group: Upper Shelly Beds	-7.30	-8.30	21.00	22.00	1.00	Stiff extremely closely to closely fissured dark grey slightly sandy silty CLAY with frequent light grey partings of silt.
Lambeth Group: Lower Mottled Beds	-8.30	-11.30	>22.00 (unproven)	>25.00 (unproven)	>3.00 (unproven)	<p>Stiff bluish grey mottled yellowish brown slightly sandy silty CLAY with occasional pockets (<20 mm) of soft calcrete.</p> <p>Very dense light bluish grey mottled yellowish brown silty SAND.</p>

7. Construction Methodology / Engineer Statements

7.1. Outline Temporary and Permanent Works Proposals

- 7.1.1. The new basement is to be constructed following demolition of the existing extension building (which has an existing lower ground floor and no existing basement).
- 7.1.2. The existing lower ground floor will be backfilled to approximate ground level to allow installation and construction of new embedded pile walls and capping beams. Where adjacent structures and Party Walls are present, underpinning will be adopted to form the excavation.
- 7.1.3. Temporary propping at capping beam level and at lower elevations where required will be adopted to enable basement construction and limit ground movements (effectively creating a high stiffness earth retention system). Once excavation is complete and the proposed rafts and substructure slabs have been cast, the propping will be removed. *Bottom-up* basement construction methods will be adopted.
- 7.1.4. Standard means and methods of excavation are expected to be suitable to excavate the basement, based upon the ground conditions proven by means of ground investigation works.
- 7.1.5. Design of the retaining walls and temporary propping shall be carried out in accordance with the relevant Eurocodes/British Standards, non-conflicting codes of practice, and associated design best practices.
- 7.1.6. Underpins will be installed in bays in a 'hit and miss' fashion to avoid undermining the façades/walls above. The underpins will be constructed by a reputable, experienced contractor.
- 7.1.7. It is anticipated that dewatering or groundwater management will not be required to enable the basement excavation within the London Clay Formation. The volumes arising from the perched ground water can be suitably managed/mitigated with localised pumping where required.

7.2. Ground Movement and Impact Assessment

- 7.2.1. A GMA has been carried out in accordance with CIRIA C760 and takes into account the construction methodology and site-specific ground and groundwater conditions. The GMA is included as Appendix C.
- 7.2.2. All structures / properties within the zone of influence of the proposed development have been assessed.
- 7.2.3. The following assumptions have been made within the GMA:
- The pile wall is assumed to be installed in the London Clay Formation.
 - No benefit to the raft from existing or proposed piles has been considered to provide a conservative envelope of vertical settlement.
 - The buildings included in the GMA are assumed to be founded on ground surface.
 - The walls of the above-mentioned buildings are assumed to behave as equivalent beams.
- 7.2.4. The ground movements resulting from the works comprise deformations arising from the following mechanisms:
- Installation of the underpins and pile walls.
 - Bulk excavation works.

- Heave and settlements due to the unloading / load redistribution of the London Clay and Lambeth Group Formations.

7.2.5. The following structures were assessed, having been identified as falling within the zone of influence of the proposed development:

- 75 Farringdon Road.
- 77-79 Farringdon Road.
- 55-59 Saffron Hill.
- 60-66 Saffron Hill.
- 5-11 Onslow Street.
- 81-89 Farringdon Road.
- Car Park Onslow Street.
- 44 Saffron Hill.
- 69 Farringdon Road.
- 71 Farringdon Road.
- 16, 20-24, 99 Saffron Hill.
- 87 Saffron Hill.
- 91-94 Saffron Hill.
- 95-98 Saffron Hill.

7.2.6. The evaluated potential impact is contained within Category 1 – Very Slight, in accordance with the Burland Scale.

7.2.7. An outline impact review of the works on St Cross Street, Saffron Hill and Saffron Street has also been undertaken. The roads are anticipated to experience horizontal and vertical movements of less than 12mm.

7.2.8. The expected ground movements resulting from the proposed works should be limited by means of propping the pile walls and underpins.

7.2.9. The following mitigation measures should be proposed to reduce ground movements and impact:

- Design of the propping measures shall be carried out in accordance with the relevant Eurocodes, non-conflicting codes of practice, and associated design best practice.
- Wall construction works to be performed by an experienced piling contractor.
- Frequent monitoring of neighbouring properties to be carried out during excavation, to validate ground movement predictions against reality.
- Development of a monitoring-trigger-action plan that identifies trigger levels, responsible personnel and actions to be followed in the event of a trigger level exceedance.
- Incorporating stiff, high level props into the temporary works design of the excavation, so as to provide a high stiffness wall. Design details regarding minimum wall flexural stiffness, prop stiffness and arrangement, shall be defined as part of detailed design development.
- Designated areas for stacking and storing materials behind the underpins should be identified. These should be located away from sensitive structures. The design of the underpins should incorporate an appropriate surcharge load to the rear of the wall, to capture effects of stacking and storing materials, vehicle traffic, etc.
- The GMA did not consider the impact of the proposed development on existing buried utilities (e.g. Thames Water sewer assets). It is expected that these assets will be assessed (if applicable to the proposed works) following

engagement of the asset owner and direction from the asset protection team, with regards to establishing limiting performance criteria.

7.3. Control of Construction Works

- 7.3.1. Following the selection of a Principal Contractor, a Construction Method Statement should be developed, which will cover the items outlined in this section in detail.
- 7.3.2. Work method statements developed for main stages of the construction works, outlining the means and methods of safely carrying out the works.
- 7.3.3. Details of temporary propping and temporary works, required to ensure structural stability is maintained throughout demolition and excavation operations.
- 7.3.4. Construction traffic management plans.
- 7.3.5. Detailed development of structural and environmental monitoring strategy, developed to control construction works and maintain movements/impacts within the predicted limits and monitor environmental impacts, including:
 - A structural monitoring layout plan of instrumentation/survey points/critical sections.
 - Programme/frequency of monitoring.
 - Trigger values derived for each of the structures within the zone of influence of the proposed works.
 - Contingency actions and project team lines of responsibility.

8. Basement Impact Assessment

8.1. General

8.1.1. The Conceptual Site Model (CSM) is described below:

- The ground conditions of the site comprise Made Ground overlying the London Clay Formation over the Lambeth Group Formation.
- During the intrusive investigation groundwater seepages were recorded in BH02 at 9.30 and 10.30mbgl within the London Clay Formation. A groundwater strike was recorded at 13.30mbgl within the Lambeth Group – Upper Mottled Beds. No perched groundwater was encountered in the Made Ground.
- The site is currently occupied by a multi-storey car park and office space comprised of eight stories with a lower ground floor. The top two floors are used as office spaces while the bottom six are used as a car park. The southern boundary of the site comprises of St Cross Street and the western boundary of the site comprises of Saffron Hill and a multi-storey residential building.
- Neighbouring buildings are assumed to be founded near surface.
- The proposed development may result in impact to the neighbouring buildings. Any potential impact will be mitigated by appropriate construction means and methods (such as temporary propping/shoring and controlled excavation operations).

8.2. Land Stability / Slope Stability

- 8.2.1. It is assumed that all new substructure elements will be founded on a 1m deep raft formed in the London Clay Formation, which is considered to be a suitable founding stratum.
- 8.2.2. The risk of movement and impact to this development due to volumetric changes of the London Clay Formation will be considered as part of the scheme design of the development. Heave mitigation measures (if appropriate) will be adopted, and the relevant soil structure interaction mechanisms will be reviewed.
- 8.2.3. A GMA has concluded that ground movements caused by demolition of the existing building, excavation and construction of the proposed development will be limited. The upper bound impact category for surrounding structures within the zone of influence of the proposed development has been assessed as Category 1 – Very Slight in accordance with the Burland Scale.
- 8.2.4. The BIA has concluded that risks to the adjacent properties, public highway and infrastructure (including ultimate and serviceability limit state considerations) are limited and will be mitigated in a reasonable fashion as part of design development.

8.3. Hydrology and Groundwater Flooding

- 8.3.1. The BIA has concluded that there is no risk of groundwater flooding.
- 8.3.2. The BIA has concluded that there are no impacts to the wider hydrogeological environment.

8.4. Hydrology, Surface Water Flooding and Sewer Flooding

- 8.4.1. The BIA has concluded that there is a very low risk of surface water flooding.
- The BIA has concluded that there are no impacts to the wider hydrological environment.

1. Introduction

A2 Site Investigation Ltd (A2SI) has been engaged by Heyne Tillett Steel Ltd (HTS) to prepare a phase I desk study report for the proposed development at 45 – 54 Saffron Hill and 3 Saffron Street, London, EC1M 3JY (herein called the ‘site’). The proposed development is described in more detail in Section 6 but can generally be described as the demolition of the existing structure and the construction of a new 9-storey building with a lower ground floor and basement.

1.1. Study Aims and Objectives

The desk study develops an initial Conceptual Site Model (CSM) and provides a qualitative Preliminary Risk Assessment (PRA) for the proposed development in accordance with *Land Contamination Risk Management* (LCRM) guidance, published by the Environment Agency on the UK Government website. The desk study has been prepared in the context of the *National Planning Policy Framework* (NPPF) and *The Building Regulations 2010, Approved Document C - Site preparation and resistance to contaminants and moisture (2004 Edition incorporating 2010 and 2013 amendments)*. The desk study includes an assessment of whether there are any unacceptable risks (ref. LCRM guidance) which require further geo-environmental investigation.

Preliminary geotechnical assessment is not included in this desk study.

The outcomes of this desk study have been developed based on information current at the time of writing.

1.2. Information Sources

The desk study has been prepared based on information available in the public domain and in the provided documentation, including the following sources:

- *Envirocheck Report* for Saffron Hill prepared by Landmark Information Group, dated September 2023 (ref. 317442778_1_1), included in Appendix B.
- *Stage 1 Preliminary UXO Risk Assessment* for 14 St Cross Street, London prepared by Brimstone, dated September 2023 (ref. PRA 23-2257), included in Appendix C.
- British Geological Survey, GeoIndex Onshore GIS database (accessed 27th September 2023); <https://mapapps2.bgs.ac.uk/geoindex/>.
- Department for Environment, Food & Rural Affairs (DEFRA), Magic Map Application (accessed 27th September 2023); <http://magic.defra.gov.uk/MagicMap.aspx>.
- Historic England, online Aerial Photo Explorer (accessed 27th September 2023); <https://historicengland.org.uk/images-books/archive/collections/aerial-photos/>.
- UK Health Security Agency (UKHSA) and BGS radon mapping (accessed 27th September 2023); <https://www.ukradon.org/information/ukmaps>.
- *The Lost Rivers of London* by Nicholas Barton, 1962.
- Google Earth (ref. earth.google.com/web/), accessed 27th September 2023.
- Flood Maps for Planning (ref. <https://flood-map-for-planning.service.gov.uk/>), accessed 27th September 2023).
- Local authority planning portal (ref. <https://www.camden.gov.uk/search-for-planning-applications>), accessed 27th September 2023.

2. Site Setting

2.1. Location and Current Site Use

The site is located at 45 – 54 Saffron Hill and 3 Saffron Street, London EC1M 3JY, as shown in Figure 2.1. The approximate National Grid reference for the site is 531430, 181950 and the site footprint covers approximately 0.15 hectares. The approximate ground surface elevations at the site ranges between 13m and 18m (in the southeast and northwest corner respectively) above Ordnance Datum causing the site to have a gentle slope down to the east. Ground surface levels in the surrounding area fall towards the south.

The site falls within the administrative boundaries of the London Borough of Camden and currently includes a multi-storey car park and office space comprised of eight stories with a lower ground floor. The top two floors are used as office spaces while the bottom six are used as a car park.

The current land uses within a 250 m radius surrounding the site are summarised in Table 2.1.

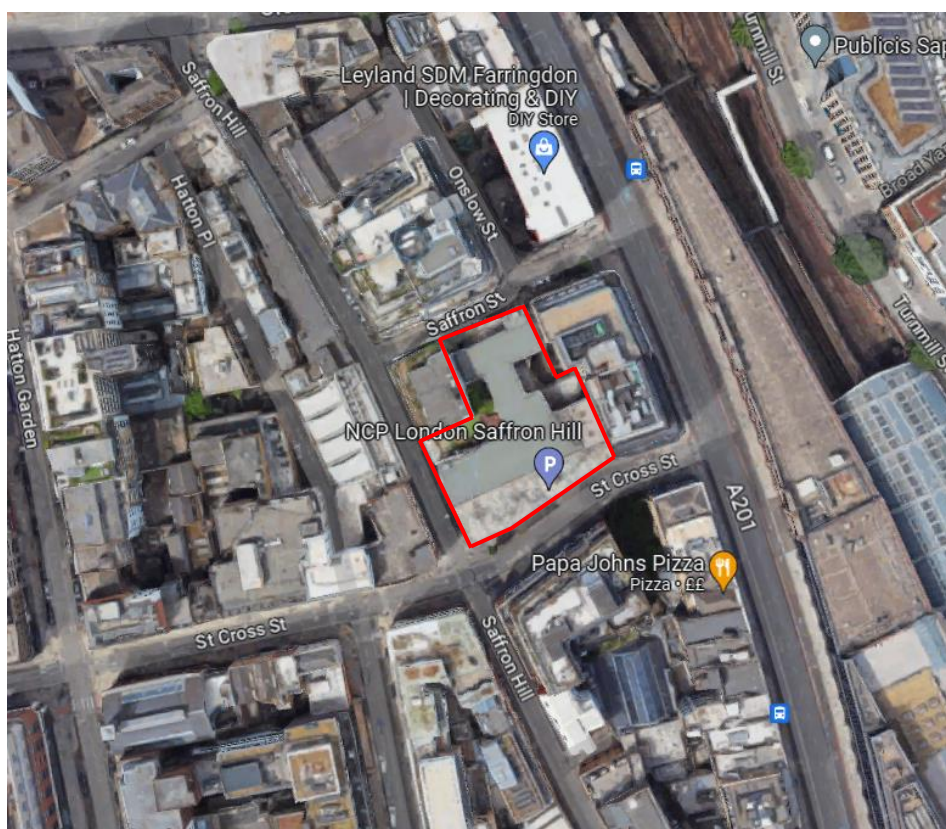

Figure 2.1 Location of the proposed development (red line reflects the site boundary used for this assessment)

Table 2.1 Surrounding land uses summary

Bearing from Site	Features directly adjacent to the site boundary	Other identified land uses and key structures
North	<p>Saffron Street – a single-lane one-way road.</p> <p>55-59 Saffron Hill – residential building up to 9-storeys in height located to the immediate northwest of the site boundary. The residential building does not have areas of soft landscaping.</p>	<p>Multi-storey residential apartments with no areas of soft landscaping are located approximately between 0m – 42m north.</p> <p>Multi-storey mixed-use commercial (office spaces) and residential buildings with no areas of soft landscaping are located approximately between 42m - 78m north along Saffron Hill</p> <p>Clerkenwell Road – dual carriageway road located approximately 80m north lined with commercial properties (such as offices and retail spaces).</p>

Bearing from Site	Features directly adjacent to the site boundary	Other identified land uses and key structures
		<p>Mixed-use (commercial and residential) buildings up to 6-storeys tall located approximately between 17m – 76m northwest, and 90m – 190m north.</p> <p>The Ray Farringdon (123 Farringdon Road), a commercial office building up to 9-storeys in height with soft-landscaped terraces, is located approximately between 200m and beyond 250m north of the site.</p>
South	St Cross Street – a single carriageway road.	<p>Terraced commercial buildings up to 5-storeys tall along the western side of Farringdon Road with restaurants, retail shops, and grocery stores on the ground floor and office spaces in the upper 4-storeys located between 14m to 160m south.</p> <p>Midrise corporate offices up to 6-storeys tall along the eastern side of the Farringdon Road between 50m and 165m southeast.</p> <p>Midrise commercial office spaces along Saffron Hill between 15m and 160m south-southwest of the site (including Saffron Hill). An apartment rental unit with no associated areas of soft landscaping is located approximately 100m south-southwest.</p> <p>Hatton Garden (located between 100m and beyond 250m southwest) – a street with multiple jewellers.</p> <p>Mid-rise commercial buildings used for office spaces, pharmacies, and grocery stores located between 170m to beyond 250m south.</p> <p>Anglia Ruskin University, London – Faraday Building is located between 225m and 293m south of the site. This building is made up of 6-storeys.</p> <p>Farringdon station is approximately 175m southeast from the site.</p>
East	75 – 79 Farringdon Road – mid-rise commercial buildings used as office spaces.	<p>A201 Farringdon Road – a single carriageway road with bicycle lanes on either side of the road is located approximately 20m east of the site.</p> <p>Rail tracks associated with Farringdon Station are approximately 81m away from the site to the east.</p> <p>Residential apartment buildings up to 6-storeys in height with no associated areas of soft landscaping located between 80m and 120m east.</p> <p>6-storey mixed-use buildings used for commercial retail units on the ground floor and residential apartments in the upper storeys located between 80m and 250m east.</p> <p>Saint John's Gardens – recreational park and garden, situated 168m to 229m east from the site.</p>
West	Saffron Hill – a single lane, one way road.	<p>Multi-storey apartments and office blocks with no associated areas of soft landscaping up to 250m from the site ranging from the northwest to southwest.</p> <p>Equiano Court, a 7-storey apartment building with courtyard. This building is located between 211m and 243m from the site to the southwest.</p> <p>Mixed use (commercial and residential) buildings up to 13-storeys in height with small areas of shared soft landscaping are within 250m from the site between northwest and southwest.</p>

2.2. Planning Records

The Local Authority Planning Portal has been searched for relevant records. The following planning reference numbers have been identified relating to previous applications made for the site:

- 2012/4162/P; and
- 2019/5178/P.

There are no relevant geo-environmental reports associated with the site.

2.3. Regulatory Consultation

Requests for information have been made to the following bodies:

- Environment Agency (EA), contacted via email on the 25th September 2023 (see Appendix D). Response awaited.
- Camden London Borough Council, contacted via email on the 25th September 2023 (see Appendix D). A response was received on the 28th September 2023.

Copies of the regulatory consultation undertaken are included as Appendix D.

2.3.1. Camden London Borough Council Response

A response from Camden London Borough Council was received on 28th September 2023. Whilst most of the listed sources have been already identified within the Envirocheck report, the following have been added as potential sources of contamination to the site:

- Landale Ltd – Metal Melting Process (approximately 105m northwest);
- Newspaper Factory (located approximately 220m northwest).

2.4. Unexploded Ordnance

An Unexploded Ordnance (UXO) risk assessment has been carried out by Brimstone, and is included in Appendix C. The site is located on the boundary of both the World War II (WWII)-era Metropolitan Borough of Finsbury and Metropolitan Borough of Holborn. These boroughs sustained 369.9 bombs and 908.9 bombs per 100 acres respectively – a very high bombing density.

London bomb census mapping records 23no. bombing incidents within an approximate 200m radius of the site; 1no. high explosive (HE) bombing incident is recorded on site. This appears to be part of a possible bomb-stick that was recorded over the site, which followed a south-easterly trajectory, with at least 10no. bombs dropped in the stick during the week of 21st October to 28th October 1940.

London County Council (LCC) bomb damage mapping records the northern extent of the structure on site as being ‘totally destroyed’. The LCC bomb damage map also records a V1 flying bomb on / adjacent to the site. Multiple structures immediately north and west of the site boundary were also recorded as being ‘totally destroyed’ or ‘damaged beyond repair’.

The risk associated with very shallow – less than 1m bgl – and shallow – 1-2m bgl – UXO will have been greatly relieved. The risk associated with deep UXO – more than 2m bgl – may have been mitigated but it cannot be dismissed that Unexploded Bombs (UXBs) may remain either beneath or between previous intrusions.

Brimstone has recommended for a Stage 2 Detailed Risk Assessment in order to further assess the risk to proposed works. In lieu of a Detailed Risk Assessment (DRA), Brimstone recommends on-site support for any planned ground works.

Details of risk management strategies are outlined in *CIRIA C681*.

The above provides a summary of the available UXO risk assessment. However, the full assessment provided in Appendix C must be referred to and takes precedence.

3. Geological Setting

3.1. Regional Geological Overview

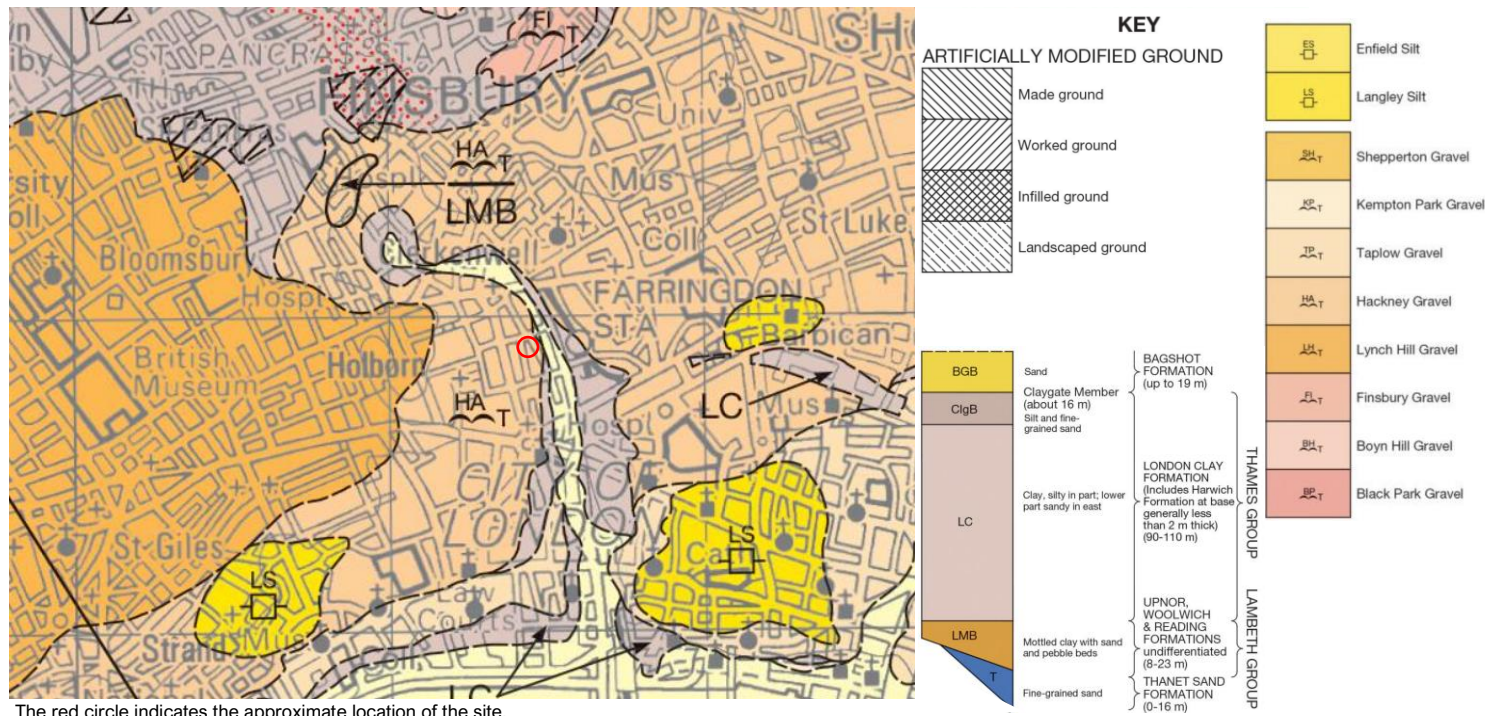

The development site is located within the London Basin, which refers to an approximately triangular synclinal structure in which the sedimentary units underlying London and much of southeast England were deposited. The London Basin is comprised of the following formations, in order of decreasing depth:

- A deep (~200m thick) layer of Chalk, deposited throughout the Upper Cretaceous period, forms the base of the basin and is the principal aquifer of the region.
- The Thanet Beds, which comprise fine, silty glauconitic sands originating in shallow seas.
- The Lambeth Group, a depositionally and geographically complex unit which comprises layers of sands and gravels, shelly and mottled clays, minor limestones and lignites, and occasional sandstone and conglomerate.
- The London Clay Formation, a fine-grained silty clay which is the dominant Thames Group Deposit.
- River Terrace Gravels, deposited by the River Thames and its tributaries on top of the London Clay.

3.2. Site Geology and Anticipated Ground Conditions

Figure 3.1 illustrates the location of the development within the context of a regional geological map. The map illustrates the spatial distribution of superficial (drift) deposits and bedrock outcrops at the ground surface. Made Ground is generally not shown but is assumed to be present on site due to historical demolition and construction works.

The geology map indicates that the site is located above the Hackney Gravel Members superficial deposit. The London Clay Formation is underlain by the Lambeth Group over Thanet Sands over Chalk. There are no superficial deposits immediately west of the site.

The red circle indicates the approximate location of the site.

Figure 3.1 Geological context of the site

The British Geological Survey (BGS) Geology of Britain web map services provide access to the geographic locations and logs of historical borehole investigations and well installations. Historical boreholes surrounding the site are shown in Figure 3.2. The following historical records have been reviewed as part of this assessment; TQ38SW2998, TQ38SW2999, TQ38SW1192/A, TQ38SW3611,

TQ38SW2532, TQ38SW5224, TQ38SW3591, TQ38SW3618, TQ38SW5489, and TQ38SW3618. Table 3.1 summarises the preliminary ground model adopted in this desk study, based on the information reviewed.

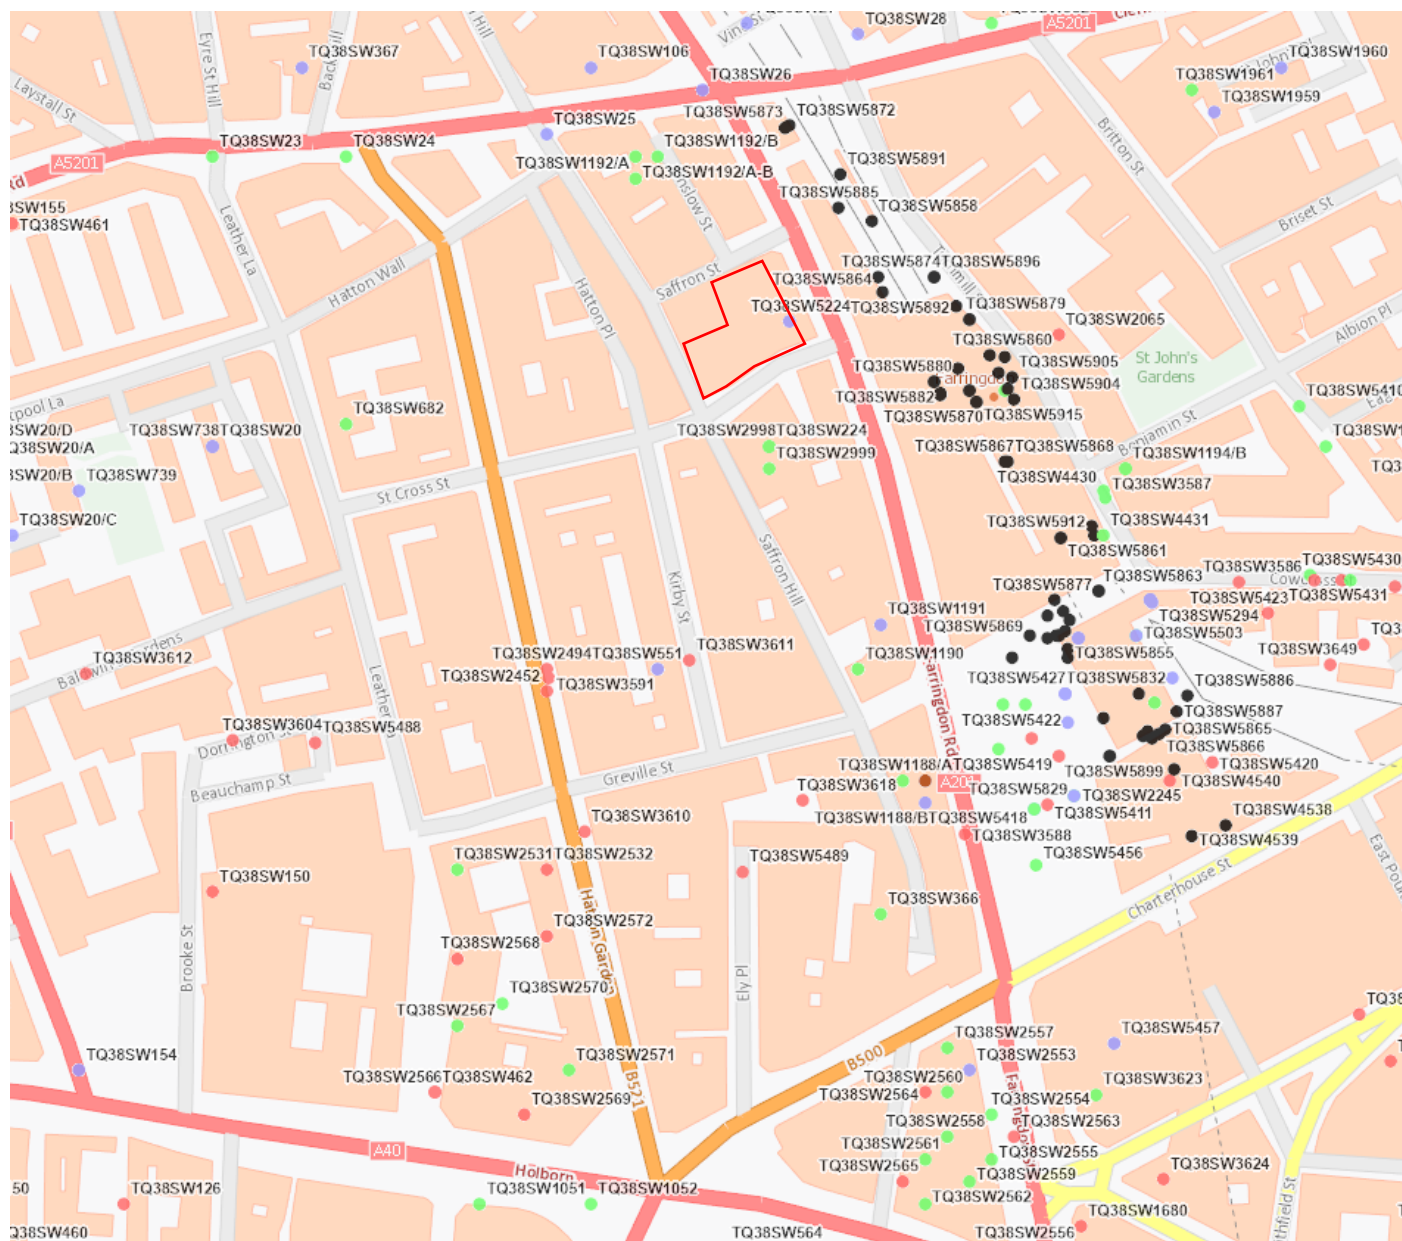

Figure 3.2 Locations of BGS boreholes in close proximity to the site boundary.

Table 3.1 Preliminary ground model

Unit	Elevation ^[1] (mOD)	Depth ^[1] (m bgl)	Thickness (m)	Description
Made Ground	+13.0	0.0	1.0	Variable anthropogenic deposits
Hackney Gravels Member	+12.0	1.0	2.0	Medium dense brown sandy to very sandy medium to coarse with occasional fine to coarse subangular to subrounded flint.
London Clay Formation	+10.0	3.0	15.0	Firm fissured brownish grey silty clay with occasional lenses of silt and locally sandy.

Lambeth Group	-5.0	18.0	14.0	Very stiff to hard micro-fissured possibly very closely fissured brown mottled light greyish blue and locally yellowish brown silty clay.
Thanet Sands	-19.0	3.0	5.0	Very dense grey locally green grey at upper interface slightly silty mainly fine and medium sand.
Chalk Group ^[2]	-24.0	37.0	>2.5 (base unproven)	Very weak low density white chalk with fractures. The Chalk is friable blocky and readily breaks. Fractures are very closely spaces horizontal and sub-horizontal planar and slightly undulating.

1. Elevation and depth refer to top of stratum.
2. Chalk was encountered at historical BGS Borehole TQ28SW5489.

3.3. Groundwater and Hydrogeology

The groundwater model is likely to comprise a perched water table, which is sustained within the more permeable superficial strata overlying the low permeability London Clay Formation. It is anticipated that the pore water pressure distribution within the London Clay Formation is likely to be in hydrostatic equilibrium with an average or mean perched water table level. Whilst it is considered that the pore water pressure distribution within the London Clay and upper Lambeth Group clays is hydrostatic, it is likely that the lower portion of the Lambeth Group, Thanet Sands and Chalk Formation are underdrained. Due to historical dewatering from the Chalk aquifer at depth, underdrainage effects are frequently observed within the strata at depth within the London Basin.

The Hackney Gravels Member, Lambeth Group, and Thanet Sands are classified as Secondary A Aquifers, defined as containing permeable layers capable of supporting water supplies at a local rather than strategic scale, in some cases forming an important source of base flow to rivers. These strata are aquifers formerly classified as Minor Aquifers.

The London Clay Formation is listed as Unproductive Strata. Unproductive Strata are low permeability strata which are not considered to retain significant quantities of groundwater. If groundwater is present within Unproductive Strata, for example within more permeable lenses or small fissures, it is typically discontinuous, of low value and very low sensitivity.

The Chalk Group is classified as Principal Aquifer, defined as rocks that provide significant quantities of water and can support water supply and/or baseflow to rivers, lakes, and wetlands on a strategic scale.

Historical BGS Borehole log TQ38SW2532 indicates that water is present at approximately 3.00m bgl.

The dominant direction of groundwater flow with the Secondary A Aquifer (Hackney Gravel Member) is anticipated to be from north to south, towards the River Thames, which is located approximately 1.1km south.

The site is not identified as being located within a groundwater Source Protection Zone (SPZ) and there are no SPZs recorded within 500m.

Localised perched water may also be present associated with any Made Ground at the site.

There are 10no. records of groundwater abstraction within 500m of the site. A summary of the groundwater abstraction is presented in Table 3.2.

Table 3.2 Groundwater Abstraction Summary within 500m of the site.

Distance from site	Direction from site	Quantity of Records	Operator	Abstraction uses	Details	License number
262m	SE	1no.	Citigen (London) Ltd.	Production of Energy: Evaporative Cooling	The Area of Land At Charterhouse Street, Smithfield	28/39/39/0176

Distance from site	Direction from site	Quantity of Records	Operator	Abstraction uses	Details	License number
267m	NE	1no.	Zorca Hospitality Limited	Commercial Private Water Undertaking: Drinking; Cooking; Sanitary; Washing; (Small Garden)	The Zetter Hotel, 86-88 Clerkenwell Road, EC1R	28/39/39/02006
275m	NE	1no.	Urban Hotels UK LLP	Commercial Private Water Undertaking: Drinking; Cooking; Sanitary; Washing; (Small Garden)	The Zetter Hotel, 86-88 Clerkenwell Road, EC1R	28/39/39/02006
275m	NE	2no.	John Marks Development Limited	Commercial Private Water Undertaking: Drinking; Cooking; Sanitary; Washing; (Small Garden)	The Zetter Hotel, 86-88 Clerkenwell Road, EC1R	28/39/39/02006
283m	SE	2no.	Citigen (London) Ltd.	Other Industrial/Commercial/Public Services: Evaporative Cooling	Charterhouse Street, Smithfield, London	28/39/39/0176
297m	SE	1no.	Citigen (London) Ltd.	Other Industrial/Commercial/Public Services: Heat Pump	Not Supplied	Th/039/0039/175
298m	SE	1no.	Citigen (London) Ltd.	Other Industrial/Commercial/Public Services: Heat Pump	Not Supplied	Th/039/0039/175
301m	SE	1no.	Citigen (London) Ltd.	Other Industrial/Commercial/Public Services: Heat Pump	Not Supplied	Th/039/0039/175

The groundwater abstractions identified, located 267m and 275m northeast of the site, are not classified as a potential receptor due to their location against the anticipated hydraulic gradient indicating an unlikely pathway from the site.

The remaining abstraction points (all operated by Citigen) though down hydraulic gradient from site have not been assessed as potential receptors due to the industrial and therefore non-sensitive uses of groundwater abstracted from these locations.

3.4. Hydrology

There are no surface water features within 500m of the site boundary. The Envirocheck report has stated that the nearest surface water feature is located 579m south of the site. Further inspection has identified the nearest surface water feature as a manmade water feature associated with New Street Square. Due to its artificial nature, it is unlikely to be hydraulically linked to the site, thus not considered as a potential receptor.

A lost river of London, the River Fleet, is present approximately 25m to the east of the site boundary. The River Fleet currently exists as a culverted subterranean river and flows southwards towards the River Thames. The River Fleet is unlikely to be hydraulic connected to the site as it is culverted. Therefore it has been discounted as a potential receptor.

The River Thames is located approximately 1.1km south of the site and has an easterly flow. Due to the distance of the River Thames from the site, it has not been considered as a potential receptor.

3.5. Mining and Mineral Extraction

The site is not listed within the Envirocheck Report as within an area affected by coal mining.

There are no BGS Mineral Site entries listed within the Envirocheck Report within 500m of the site.

No record of mining instability, man-made mining cavities or natural cavities have been recorded within 500m.

3.6. Radon

UK Health Security Agency (UKHSA) and BGS radon mapping indicates that the site is in an area with less than 1% of homes estimated to be at or above the Action Level. *The Building Regulations 2010, Approved Document C* state that without a site-specific Radon Risk Report the maximum requirement for radon protection in these areas is none.

A new basement is to be incorporated into the proposed development. As indicated in *BRE 211: Radon – Guidance on Protective Measures for New Buildings (2023)*, all basements are at increased risk of elevated levels of radon, regardless of geographic location. Therefore, despite the radon risk mapping, it is recommended that appropriate radon protection is provided for the new basement unless further assessment can demonstrate it is not needed. If radon protection is used, then an appropriate radon protection strategy which is compatible with the building waterproofing should be developed by a suitable waterproofing and radon specialist.

4. Site History

Detailed historical maps, fire insurance plans and aerial photographs of the site and surrounding area dated between 1851 and 2023 (at scales of 1:1,056, 1:1,250, 1:2,500, 1:5,280, 1:10,000 and 1:10,560), provided as part of the Envirocheck Report (Appendix B), have been reviewed as part of the study. This process has been undertaken to identify any former land uses at the site and within the surrounding area that may have geo-environmental implications for the proposed redevelopment.

The findings are summarised in Table 4.1. Only features considered to have a potential geo-environmental impact on the site and usually within a notional 250m radius of the site boundaries are presented and discussed, with the exception of any potentially infilled land which is identified within 500m of the site. Any distances quoted for features remote from the site have been scaled from the maps and are approximate. Other information sources available in the public domain have also been reviewed to support this assessment, including the Historic England online Aerial Photo Explorer and historical aerial photographs available on Google Earth.

Table 4.1 History of the site and surrounding areas

Historical Feature	Distance and Bearing from Site	Date of First Map Appearance	Date of Last Map Appearance	Potential to Impact the Site?
<i>On-Site</i>				
Unspecified buildings (assumed residential) on the west side of the site	-	1874	1882	Yes
School comprising the southern half of the site footprint (Saffron Hill School)	-	1896	1937	Yes
Smithfield Institute (later Smithfield Meat Trades Institute) in the southern corner and later extends to the entire southern portion	-	1934	1956	Yes
Lamp Warehouse in the northern portion of the site (Falk Stadelmann & Co. Ltd H W Warehouse)	-	1934	1966	Yes
Cleared Land across the entire site footprint	-	1946	1957	Yes
Ruin in the southeast corner	-	1953	1953	Yes
Multistorey car park with office spaces in the upper storeys taking up the whole site footprint	-	1970	Present	Yes
Electrical Substation in the southern corner of the site	-	1966	1970	Yes
<i>Off-Site</i>				
G. B. Kent & Sons Ltd Brush & Sponge Warehouse (later Peoples Press Printing Society Ltd)	E Adjacent	1934	1970	Yes
Arthur & Co Ltd. Textile Warehouse	E Adjacent	1960	1970	Yes
Film Warehouse - Oil Tank and Oil Fuel Heater in the basement	W Adjacent	1960	1970	Yes
St Peter's Church (later a "Ruin")	13m S	1875	1958	Yes

Historical Feature	Distance and Bearing from Site	Date of First Map Appearance	Date of Last Map Appearance	Potential to Impact the Site?
Paper & Stationery Warehouses, Offices, and Jewellery Factory	25m SW	1956	1970	Yes
Lorry Yard (later a Garage)	110m SW	1956	1970	No (Distance and direction indicates an unlikely pathway to the site)
Wider Standelmann & Co. Ltd Warehouses – Veritas Lamp & Gas & Electric Fittings (including Watch & Clock Warehouse, Rubber Goods Warehouse Hat Warehouse, J. Murphy Publishers Warehouse, and other unnamed warehouses)	5m – 85m N	1934	1960	Yes
Wider Hopkins & Williams Ltd Drug Warehouse to include various warehouses (later Baird & Tatlock Apparatus Warehouse)	50m W	1934	1970	Yes
Saw Mill	140m W	1874	1878	No (Distance and direction indicates unlikely pathway to the site)
Gee & Watsons Ltd. Litho-Printers	5m – 40m N	1970	1970	Yes
Thermometer Factory (with an Oil Tank and Oil Heater) (later “Var. Engineer”)	80m NW	1934	1970	Yes
Drug Warehouse (later “Medicines, Packing & Offices”)	30m W	1934	1970	Yes
Brewery	190m NW	1896	1896	Yes
Glass Works	35m W	1934	1970	Yes
Garages	25m W	1934	1934	Yes
	30m W	1934	1934	Yes
	35m NW	1934	1934	Yes
	140m NW	1974	1982	Yes
Silversmith	50m NW	1934	1942	Yes
Oil Tank and Oil Heaters	10m W	1960	1970	Yes
	80m N	1960	1970	Yes
Printing Works	15m – 40m S	1960	1970	Yes
	100m E	1877	1877	Yes

Historical Feature	Distance and Bearing from Site	Date of First Map Appearance	Date of Last Map Appearance	Potential to Impact the Site?
Goods Shed	140m N	1874	1877	Yes
	130m N	1916	Present	Yes
	80m – 240m SE	1916	1954	Yes
Farringdon Station	166m SE	1857	Present	No (A combination of distance and anticipated groundwater flow indicates an unlikely pathway to the site)
Timber Yard	175m NW	1896	1916	Yes
Various Warehouses and Factories (to include Picture Frame Factory, China & Glass & Drugs Warehouses, Brush Warehouse, Leather Goods, Factory, Book Binders, General Warehouses, Cable Warehouses, and a Lamp Warehouse amongst others)	5m – 70m S	1934	1970	Yes
Gold Refinery (later works)	115m – 170m SW	1916	1958	No (Distance and direction from the site indicate unlikely pathway to the site)
Electricity Substation	60m W	1934	1953	Yes
	121m NE	1971	Present	Yes
	75m S	1975	Present	Yes
Railway Lands (including Rail Tracks associated with Farringdon Train Station)	40m E	1851	Present	Yes
Burial Ground (Disused)	140 – 200m E	1878	1878	No (Distance and direction indicates unlikely pathway to the site)
Distillery	110m – 160m E	1877	1961	No (Distance and direction indicates unlikely pathway to the site)
Car Park	55m E	1970	1991	Yes
	50m W	1970	1970	Yes
	10m – 50m N	1962	1965	Yes
Ruins	10 m– 50m N	1953	1953	Yes
	10m – 30m NW	1953	1953	Yes

Historical Feature	Distance and Bearing from Site	Date of First Map Appearance	Date of Last Map Appearance	Potential to Impact the Site?
	37m N	1953	1953	Yes
	25m W	1953	1953	Yes
	58m NW	1953	1953	Yes
	200m NE	1953	1953	Yes
	100m – 160m W	1953	1953	No (Distance and direction indicate a viable pathway to the site)
Tobacco Factory (later unspecified Factory)	150m – 210m NW	1953	1994	Yes

5. Environmental Designations and Data

5.1. Regulatory Data

Regulatory data from the Envirocheck Report in close proximity to the development site (generally within 250m of the site boundary, with the exception of landfill and infilled ground which is identified within 500m of the site) has been summarised in Table 5.1. The information provided for each item in Table 5.1 has been summarised from the Envirocheck Report for risk assessment purposes. For a full breakdown of the regulatory data refer to the Envirocheck Report in Appendix B.

Table 5.1 Summary of regulatory data

Item	Distance and Bearing from Site	Information	Potential to Impact the Site?
<i>Agency & Hydrogeological</i>			
Local Authority Pollution Prevention and Controls <i>Records on site: 0</i> <i>Records within 0-250m: 4</i>	98m W	Name: Mastermelts Ltd Status: Permitted Type: Part B – General Metal Process (No Specific Reference)	Yes
	178m W	Name: Sue Smart Status: Permitted Type: PG6/46 Dry Cleaning	Yes
	196m SW	Name: Mastermelt Status: Authorised Type: PG2/4 Iron, steel, and non-ferrous metal foundry processes	No (Distance and anticipated groundwater flow indicates an unlikely pathway to the site)
	219m NE	Name: Somerfield Clerkenwell Road Status: Site Closed Type: PG1/14 Petrol Filling Station	Yes
<i>Waste and Landfill</i>			
Historical Landfill Sites <i>Records on site: 0</i> <i>Records within 0-250m: 0</i> <i>Records within 250-500m: 1</i>	494m N	Name: Rosoman Street / Skinner Street Last Input Date: 31 st December 1978 Specified Waste: Deposited Waste included Inert Waste	No (Distance from the site does not indicate an unlikely pathway to the site)
<i>Facilities Registered as using Hazardous Substances</i>			
No relevant records			
<i>Industrial Land Uses and Points of Interest</i>			
<i>(potential sources of contamination are identified within 100 m of the site boundary, and more distant potential sources of contamination are identified where the anticipated shallow groundwater flow direction towards the south indicates a viable pathway to the site may be present)</i>			
	5m E	Type: Printers Status: Inactive	Yes

Item	Distance and Bearing from Site	Information	Potential to Impact the Site?
<p>Contemporary Trade Directories and Points of Interest</p> <p><i>Records on site: 0</i></p> <p><i>Records within 0-250m: 522</i></p> <p>(only records based on the criteria in the section heading are shown opposite for risk assessment purposes. See Appendix B for all records)</p>	7m E	Type: Office Furniture & Equipment Status: Active	No (Identified as a commercial office space therefore an unlikely potential source of contamination)
	4no. records at 19m SW	Type: Jewellery Manufacturers & Repairers Status: Inactive	No (Identified as retail units, therefore an unlikely potential source of contamination)
	23m SE	Type: Packaging Materials Manufacturers & Suppliers Status: Inactive	No (Identified as a commercial office space therefore an unlikely potential source of contamination)
	41m S	Type: Medical Instruments – Manufacturers Status: Inactive	Yes
	2no. records at 48m SW	Type: Office Furniture & Equipment Status: Inactive	No (Identified as commercial office, therefore an unlikely potential source of contamination)
	48m SW	Type: Wire Products – Manufacturers Status: Active	Yes
	2no. records at 51m NW	Type: Printers Status: Inactive	Yes
	54m SW	Type: Precious Metal Recovery Status: Inactive	Yes
	62m N	Type: Laboratories Status: Inactive	Yes
	62m N	Category: Industrial Features Class Code: Business Parks and Industrial Estates	Yes
	72m W	Type: Dry Cleaners Status: Inactive	Yes
	78m N	Type: Builders' Merchants Status: Inactive	Yes

Item	Distance and Bearing from Site	Information	Potential to Impact the Site?
	3no. records at 79m SE	Type: Printers Status: Inactive	Yes
	2no. records at 80m S	Type: Insulation Materials Status: Inactive	Yes
	96m W	Type: Copying & Duplicating Services Status: Inactive	Yes
	2no. records 131m NE	Type: Printers Status: Inactive	Yes
	2no. records at 152m NW	Category: Industrial Features Class Code: Business Parks and Industrial Estates	Yes
Fuel Station Entries <i>Records on site: 0</i> <i>Records within 0-250m: 1</i>	221m N	Name: Clerkenwell Road Service Station Status: Obsolete	Yes

5.2. Flood Risk

Maps provided by Envirocheck indicate that the site has the potential for groundwater flooding to occur at surface level in the northeastern portion of the of the site and the potential for groundwater flooding of the property situated below ground level in the southwestern portion of the site.

Flood Maps for Planning (ref. <https://flood-map-for-planning.service.gov.uk/>, accessed 27th September 2023) indicates that the site is located in a Flood Zone 1 i.e. there is a low probability of flooding.

No further consideration of flood risk is given in this report. Specialist flood risk advice should be sought with regards to drainage and flooding.

5.3. Ecology, Flora and Fauna

No records of potentially sensitive ecological receptors as defined by the *Environmental Protection Act (1990) Part 2a (as amended)* have been identified.

An assessment of potential invasive species is not included in this report.

6. Proposed Development

The scheme for the proposed development consists of the demolition of the existing structure and the construction of a new 9-storey commercial office building with a lower ground floor and a basement. The basement is proposed to take a rectangular shape located at the centre of the site footprint. The existing piles are to be cut down to allow for the proposed development of the new basement and raft solution over. To account for areas of high loading, new piles may be incorporated into the design.

Proposed plans of the basement, the lower ground floor, and the ground floor are presented as Figure 6.1, Figure 6.2, and Figure 6.3, respectively. The presented proposed plans are correct at the time of writing this report.

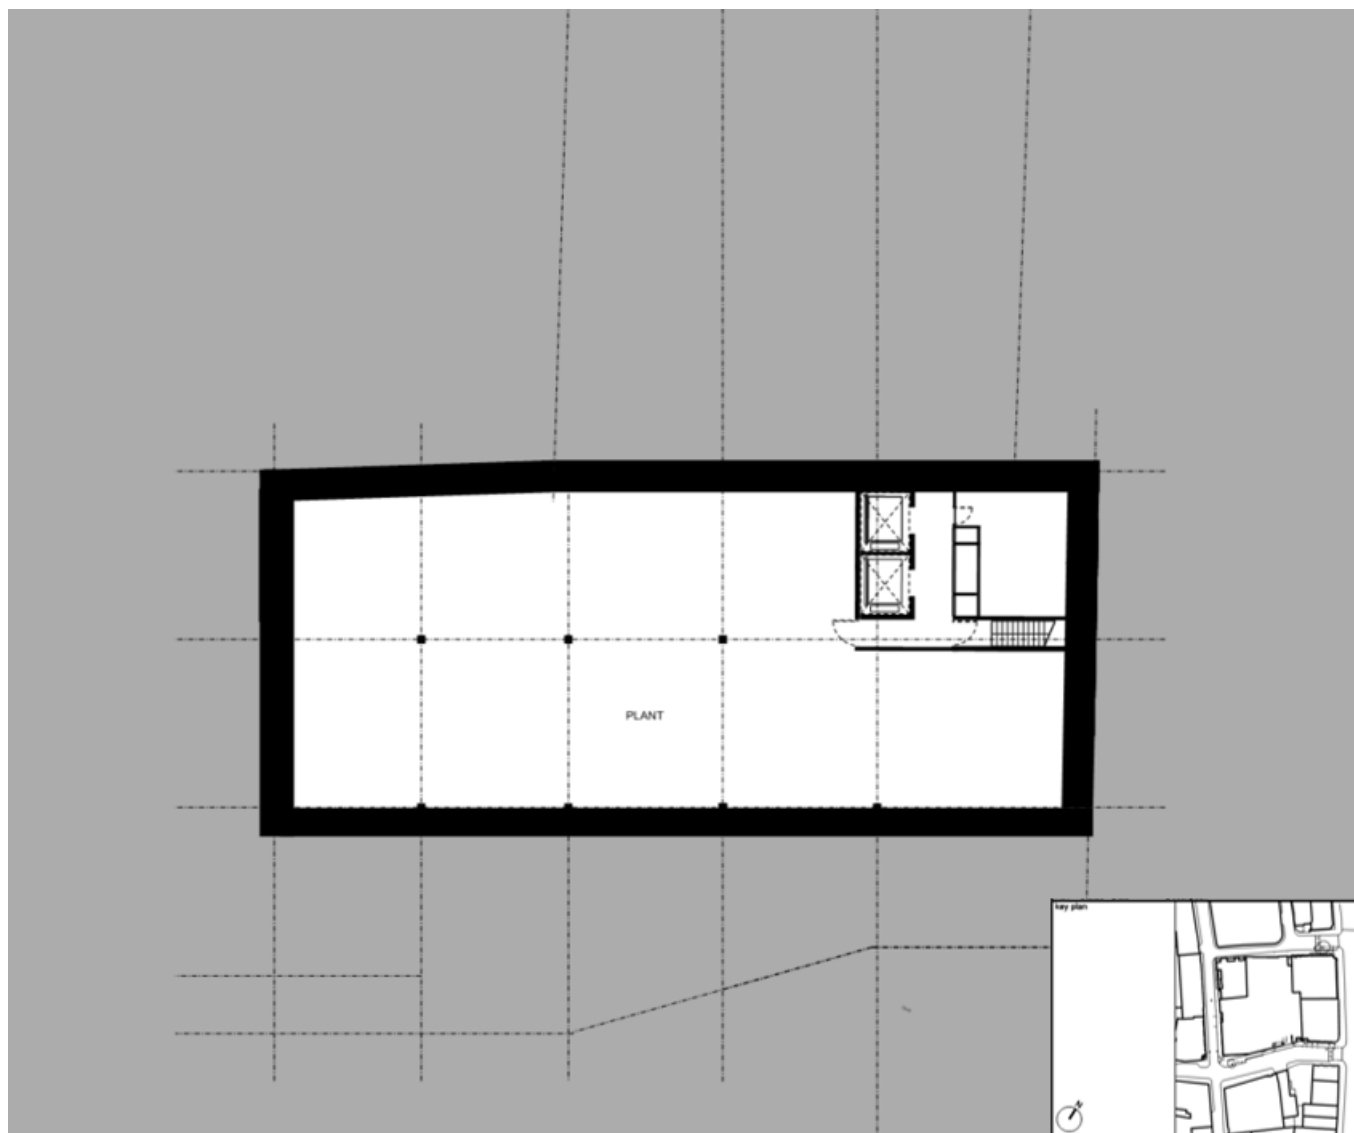

Figure 6.1 Proposed basement plan.

Figure 6.2 Proposed lower ground plan.

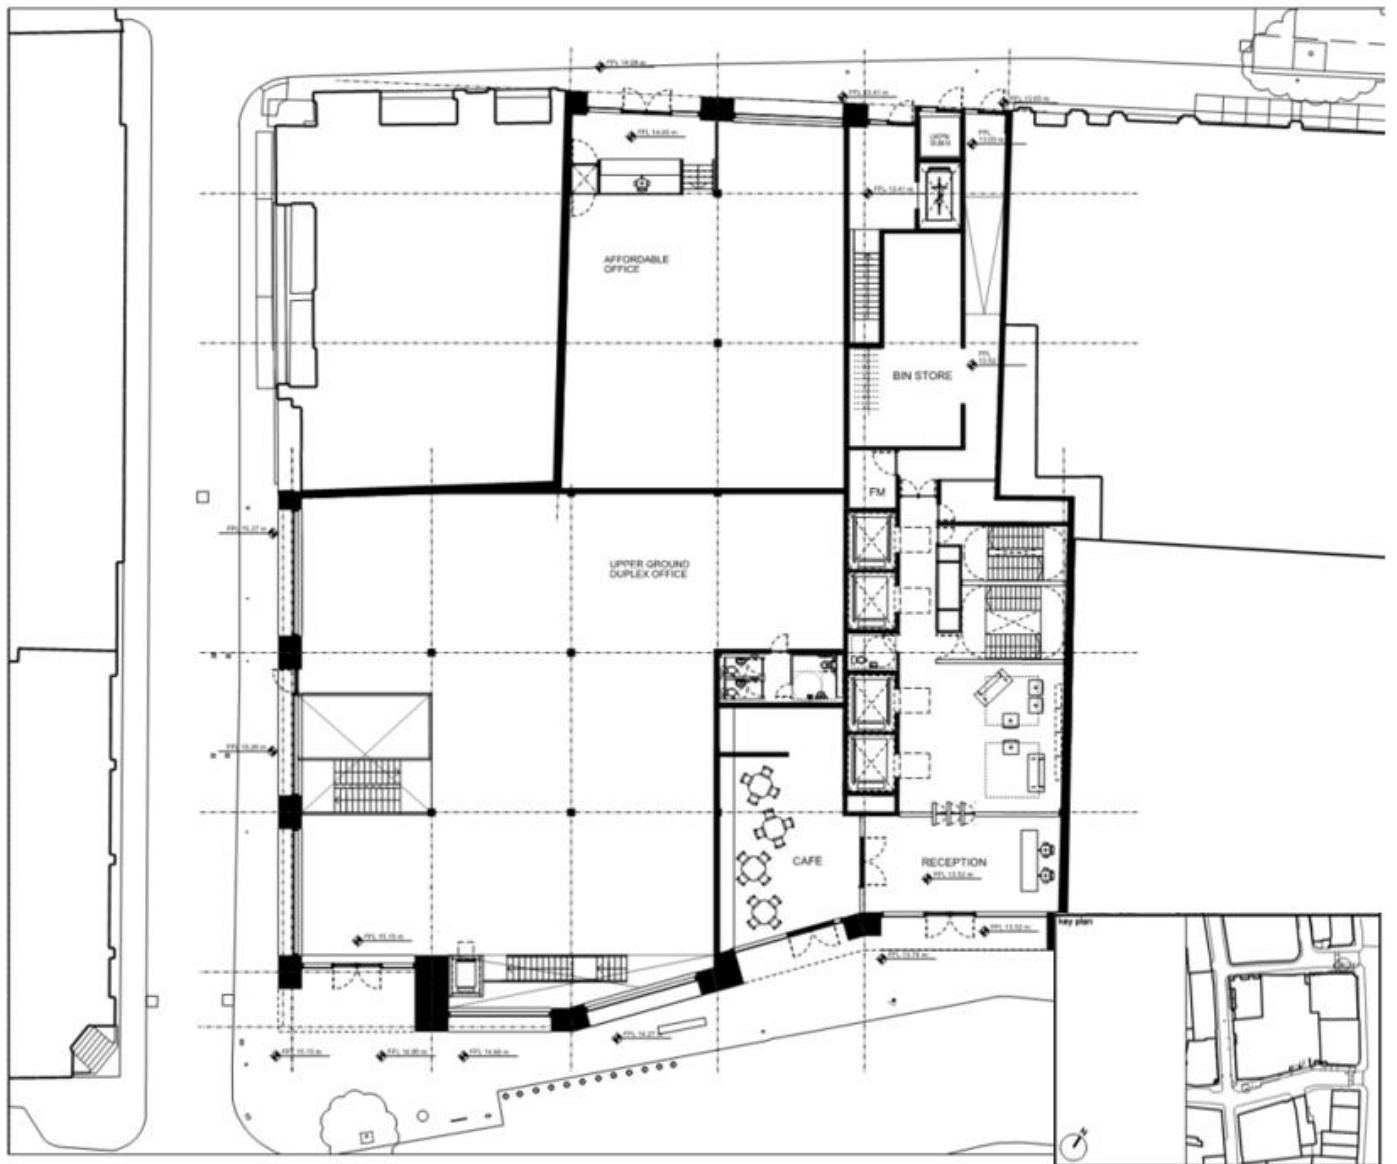

Figure 6.3 Proposed ground floor plan.

7. Conceptual Site Model (CSM) and Preliminary Risk Assessment (PRA)

A means to qualitatively assess the risk posed by potential land contamination to a proposed development is to prepare an initial CSM and carry out a PRA. An initial CSM represents the characteristics of the site which influence the possible relationships between identified potential contaminant sources, pathways and receptors. A PRA is undertaken for each potentially complete source-pathway-receptor linkage (potential contaminant linkage).

An initial CSM and PRA for the proposed development is set-out below in consideration of all the information detailed in the earlier sections of this report. Should any changes be made to the proposed development compared to the details presented herein, or should any new information become available, then the PRA must be updated.

7.1. Potential Contaminants of Concern

The relevant potential on- and off-site contamination sources are summarised in this section. Off-site potential sources of contamination within 100 m of the site boundary are identified and considered further, as well as potential sources of contamination within 250 m of the site boundary where the anticipated groundwater flow direction towards the south indicates a pathway to the site may be present. Relevant potential ground gas sources within 500 m of the site are also identified.

Current and former residential land-uses, retail units, offices and other general commercial uses (non-industrial) are not considered potential sources of contamination unless stated otherwise.

Naturally occurring radon risks are discussed separately in Section 3.

Please be aware that the nature of historical records mean that every potential source of contamination may not be detailed in the available documents. Therefore, there is potential for additional sources of contamination to be present.

7.1.1. On-Site Sources

- Made Ground associated with current and former onsite developments – heavy metals and metalloids, acids / alkalis, PAHs, asbestos, elevated sulphate and ground gases.
- Smithfield Institute (Smithfield Meat Trades Institute School) – heavy metals and metalloids, acids / alkalis, TPHs, VOC, SVOC, elevated sulphates, pathogens* and nitrates.
- Lamp Warehouse – heavy metals and metalloids, acids / alkalis, PAHs, PCBs, TPHs and VOCs.
- Ruins - heavy metals and metalloids, acids / alkalis, TPH and PAHs.
- Electrical Substation – heavy metals and metalloids, PCBs, TPHs, PAHs, and VOCs.
- Leaks from vehicles in the existing multi-storey car park – heavy metals and metalloids, acids / alkalis, PAHs, TPHs (incl. BTEX and MTBE), and VOCs.
- UXO blast damage – heavy metals and metalloids and explosives (2,4,6 – trinitrotoluene, RDX and HMX)

Asbestos containing materials (ACMs) may be present in the current building fabric. Mitigation measures for potential asbestos in the current building fabric are described below separate to the ground-based risks in Table 7.1.

*Though pathogens are associated with animal processing works, it is unlikely (based on the development being named as a school) that substantial processing occurred on site and therefore pathogen risks to the site are classified as 'low'.

7.1.2. Off-Site Sources

- Former G. B. Kent & Sons Ltd Brush & Sponge Warehouse (east adjacent)
- Former Arthur & Co. Ltd Textile Warehouse (east adjacent)
- Former Film Warehouse with oil tank and oil fuel heater (west adjacent)
- St Peter's Church Ruins (13m south)
- Former Wider Standelmann & Co. Ltd Warehouses (5m – 85m north)

- Former Wider Hopkins & Williams Ltd Drug Warehouses (50m W)
- Former Gee & Watsons Ltd Litho-Printers (5m – 40m north)
- Former Thermometer Factory with an oil tank and oil heater (80m northwest)
- Former Drug Warehouses (30m west)

The above bullet-points are a summary list of the most pertinent potential off-site sources. Other potential off-site sources are identified in the earlier sections of this desk study, including; former glass works (35m west), former garages (25m and 30m west, 35m and 140m northwest), former silversmith (50m northwest), former oil tank and oil heaters (10m west and 80m north), former printing works (15m – 40m south, 100m east, and 140m north), goods shed (130m north and 80m – 240m southeast), former timber yard (175m northwest), former various warehouses (5m – 70m south), electrical substations (60m west, 75m south, and 121m northeast), railway land (40m east), car parks (55m east, 50m west, and 10m – 50m north), ruins (10m – 50m north, 10m – 30m northwest, 37m north, 25m west, 58m northwest, and 200m northeast), former tobacco factory and later a factory (150m – 210m northwest), Mastermelt Ltd – general melting process (98m west), petrol filling station (219m northeast), fuel filling station (221m north), former printers (5m east, 51m northwest, 54m northwest, 79m southeast, 88m, 131m northeast), wire products manufacturers (48m southwest), laboratories (62m north), precious metal recovery (54m southwest), dry cleaners (72m and 178m west), insulation materials (80m south), copying and duplicating services (96m west), Landale Ltd – metal melting process (105m northwest), newspaper factories (220m northwest), medical instruments manufacturer (41m south), paper & stationery warehouses and jewellery factory (25m southwest), brewery (190m northwest), business parks and industrial estates (62m north and 152m northwest), and builders' merchants (78m north).

The relevant contaminants of concern associated with the potential off-site sources are; heavy metals and metalloids, acids /alkalis, PAHs, PCBs, TPHs (incl. BTEX and MTBE), VOCs, SVOCs, and elevated sulphates.

Asbestos has not been indicated for potential off-site sources as there is no relevant pathway for asbestos to migrate through the ground towards the site.

Notes -

TPH – total petroleum hydrocarbons (inc. BTEX)

PAH – polycyclic aromatic hydrocarbons

VOC – volatile organic compounds

SVOC – semi-volatile organic compounds

BTEX – benzene, toluene, ethylbenzene, xylenes

MTBE – methyl tert butyl ether

PCBs – polychlorinated biphenyls

Asbestos – potential free fibres, debris and / or fragments of asbestos containing material (ACM).

Ground gas – methane, carbon dioxide, carbon monoxide and / or hydrogen sulphide (excludes soil vapour)

7.2. Potential Pathways

The potential pathways identified as part of this assessment include:

7.2.1. On-Site Human Health

- Dermal contact or ingestion of soils at the site.
- Inhalation of ground gas, soil vapour or soils at the site.
- Consumption of water from impacted water supply pipes installed as part of the proposed redevelopment.

7.2.2. Off-Site Human Health

- Inhalation of wind-blown soil derived from the site.

- Migration off-site at shallow depth via preferential pathways and / or shallow perched groundwater followed by direct contact / inhalation / ingestion of contaminated soils.
- Off-site migration of ground gas or soil vapour followed by accumulation and inhalation within neighbouring properties.
- Migration off-site at shallow depth via preferential pathways and / or shallow perched groundwater followed by impact to water supply pipes and ingestion.

7.2.3. On-Site Buildings and Below Ground Structures

- Direct contact of 'aggressive' ground and / or grossly impacted soils with building structures / foundations.
- Accumulation of ground gas or soil vapour within buildings followed by ignition.

7.2.4. Off-Site Buildings and Below Ground Structures

- Migration off-site via preferential pathways, shallow groundwater and / or shallow perched groundwater followed by direct contact with building structures / foundations.
- Off-site migration of ground gas or soil vapour followed by accumulation within buildings and ignition.

7.2.5. Controlled Waters

- Leaching from the unsaturated zone.
- Perched water percolation and / or lateral migration.
- Migration via advection and diffusion in the saturated zone.
- Vertical and lateral migration of free-phase product in the unsaturated and saturated zones.

7.2.6. Sensitive Ecology, Flora and Fauna

- On-site ingestion / dermal contact / inhalation / root uptake.
- Off-site migration at shallow depth via preferential pathways and / or shallow perched groundwater followed by ingestion / dermal contact / inhalation / root uptake.
- Off-site migration via controlled waters pathways followed by ingestion / dermal contact / inhalation / root uptake.

7.3. Potential Receptors

The potential receptors identified as part of this assessment include:

- Human health of proposed site end users (commercial users and occasional below-ground maintenance workers).
- Human health of off-site commercial end users (closest of which is immediately east of the site) and residential end users (closest directly northwest of the site).
- Property including on-site (proposed) and off-site buildings / structures.
- Controlled waters (groundwater) – Hackney Gravels (Secondary A Aquifer) associated with the superficial deposits anticipated beneath the site.
- Flora and fauna on-site and off-site.

New foundation systems associated with the proposed redevelopment are not anticipated to penetrate the base of the London Clay Formation. Therefore, bedrock aquifers beneath the London Clay Formation are not considered further in this assessment as there is no risk of preferential pathways being created via piling. The Client should inform A2SI of the foundation termination depths once final designs have been prepared so that no requirement for a foundation works risk assessment can be confirmed.

Risks to site workers and the environment (from potential land contamination) during the construction phase of the proposed redevelopment can be appropriately managed by successful implementation of construction phase risk assessments and method statements (RAMS). The associated construction phase risks from potential contamination are not considered further in this document.

but should be appropriately considered and mitigated by the Principal Contractor in their preparation and implementation of construction phase RAMS and Construction Phase Plan (CPP).

7.4. Summary of Potential Contaminant Linkages

There are some potentially complete contaminant linkages based on the identified sources, pathways and receptors. Table 7.1 presents a PRA for contaminant linkages relevant for the proposed development. Qualitative risk classifications are provided in accordance with *CIRIA C552: Contaminated Land Risk Assessment, A Guide to Good Practice (Rudland et al., 2001)* (see summary in Appendix A). Where there is no potentially complete contaminant linkage then no risk classification is provided. The PRA is applicable to current climatic conditions and those which may be expected in future due to human induced climate change.

Table 7.1 Preliminary Risk Assessment (PRA)

Potential Contaminant Source	Potential Pathway	Potential Receptor	Potential Contaminant Linkage	Risk Level Classification
On-site See Section 7.1.1	Direct contact with soil	Human health of proposed site end users (see Section 7.3)	No	No classification
	Inhalation of windblown soil		(There are no soft landscaping included in the proposed development)	No classification
	Ingestion of soil			No classification
	Impact to water supply pipes followed by ingestion of contaminated water supply		Yes (New pipes may be laid in impacted soils)	Moderate
	Ground gas generation and inhalation		Yes (Made Ground represents a potential source of ground gas)	Moderate
	Soil vapour generation and inhalation		Yes (Volatile contaminants are potentially present)	Moderate
	Inhalation of windblown soil from the site	Off-site human health (see Section 7.3)	No (There are no soft landscaping included in the proposed development)	No classification
	Off-site migration and direct contact with impacted soil		No (The near vicinity of the site do not have areas of soft landscaping to allow for the completion of the source-pathway-receptor linkage)	No classification
	Off-site migration and ingestion of impacted soil			No classification
	Impact to water supply pipes followed by ingestion of contaminated water supply		Yes (Pipes may be laid in nearby soils impacted by potential contamination)	Low to moderate

Potential Contaminant Source	Potential Pathway	Potential Receptor	Potential Contaminant Linkage	Risk Level Classification
	Ground gas generation, off-site migration and inhalation	On-site buildings / structures (proposed)	Yes (Made Ground represents a potential source of ground gas)	Low to moderate
	Soil vapour generation, off-site migration and inhalation		Yes (Volatile contaminants are potentially present)	Low to moderate
	Direct contact		Yes (Structures may be constructed in impacted soils or be subjected to sulphate “attack”)	Low to moderate
	Migration followed by ignition of ground gas		Yes (Made Ground represents a potential source of ground gas)	Low to moderate
	Migration followed by ignition of soil vapour		Yes (Volatile contaminants are potentially present)	Low to moderate
	Off-site migration followed by direct contact	Off-site buildings / structures	Yes (Gross contamination with the potential to damage structures by direct contact is not anticipated)	Very low
	Off-site migration followed by ignition of ground gas		Yes (Made Ground represents a potential ground gas source)	Low to moderate
	Off-site migration followed by ignition of soil vapour		Yes (Volatile contaminants are potentially present)	Low moderate
	Leaching and migration to groundwater via the unsaturated zone; Perched water percolation or lateral migration; Migration via advection and diffusion in the saturated zone; and Vertical and lateral migration of free-phase product in the unsaturated and saturated zones.	Controlled waters - Underlying Secondary A Aquifer (Hackney Gravel Member)	Yes (Shallow groundwater may be present associated with natural superficial deposits beneath the site)	Low to moderate

Potential Contaminant Source	Potential Pathway	Potential Receptor	Potential Contaminant Linkage	Risk Level Classification
Off-site See Section 7.1.2	On-site ingestion / dermal contact / inhalation / root uptake	Flora and fauna in proposed soft-landscaped areas at the site	No (There are no soft landscaping included in the proposed development)	No classification
	Off-site migration at shallow depth followed by ingestion / dermal contact / inhalation / root uptake	Off-site flora and fauna in soft-landscaped areas nearby	No (There are no areas of soft landscaping within the vicinity of the site)	No classification
	On-site migration followed by direct contact or ingestion of soil	Human health of proposed site end users (see Section 7.3)	No (There are no soft landscaping included in the proposed development)	No classification
	Inhalation of windblown soil from off-site		No (The surrounding area is predominantly sealed surface therefore a viable source of potentially contaminated windblown soil is not present)	No classification
	On-site migration followed by impact to water supply pipes and ingestion of the water supply		Yes (Pipes may be laid in soils impacted by potential off-site sources)	Low to moderate
	Ground gas generation, on-site migration and inhalation		No (There were no potential sources of ground gas identified in the vicinity of the site)	No classification
	Soil vapour generation, on-site migration and inhalation	On-site buildings / structures (proposed)	Yes (Potential sources of volatile contamination have been identified in the vicinity of the site)	Low to moderate
	On-site migration followed by direct contact		Yes (It is unlikely that gross contamination with potential to damage structures is migrating onto site)	Low
	On-site migration followed by ignition of ground gas		No (There were no potential sources of ground gas identified in the vicinity of the site)	No classification

Potential Contaminant Source	Potential Pathway	Potential Receptor	Potential Contaminant Linkage	Risk Level Classification
	On-site migration followed by ignition of soil vapour		Yes (Potential sources of volatile contamination have been identified in the vicinity of the site)	Low to moderate
	On-site ingestion / dermal contact / inhalation / root uptake	Flora and fauna in proposed soft-landscaped areas at the site	No (There are no soft landscaping included in the proposed development)	No classification

The PRA has identified potential contaminant linkages with a maximum 'moderate' risk classification. Based on the results of the PRA, it is considered that there are unacceptable risks (ref. *LCRM* guidance) so ground investigation is recommended. Appropriately targeted ground investigation should be undertaken for geo-environmental purposes to enable a refinement of the CSM and geo-environmental assessments. The next stage of geo-environmental assessment should include a generic quantitative risk assessment (GQRA). The recommended ground investigation and assessments should be undertaken and presented in a geo-environmental interpretive report in accordance with *BS10175:2011 Investigation of Potentially Contaminated Sites – Code of Practice* and *LCRM* guidance.

The risk represented by potential ACMs in the current building fabric can be addressed by commissioning an asbestos Demolition and Refurbishment Survey for the relevant areas of the current building to be demolished and / or renovated. If ACMs are identified then their onward management should be informed by an asbestos specialist, but it is considered that appropriate ACM removal will be required prior to any phases of demolition.

Design of a future geo-environmental site investigation is outside the scope of this document.

7.5. Data Gaps and Uncertainties

Key data gaps and uncertainties identified in the CSM at this stage include:

- No previous ground investigations specific to contamination have been made available, therefore no information on the actual presence, or absence, of contamination is currently available.
- Depth to groundwater and flow direction are conceptual at this stage.
- A site walkover has not been undertaken at this stage; therefore unknown potential contamination sources may be present on-site.

The identified key data gaps can be addressed by undertaking the recommended geo-environmental ground investigation.

8. Closing Remarks

A2SI was appointed by HTS to prepare a phase I desk study for the proposed development at 45 – 54 Saffron Hill and 3 Saffron Street, London, EC1M 3JY.

The site currently includes an eight-storey car park and office building with a single-level lower ground floor. The scheme comprises the demolition of the existing structure and the construction of a new 9-storey commercial building with a lower ground floor and a basement. The existing piles are proposed to be reused and cut down to install a new build frame on top and to accommodate the proposed basement and raft solution.

The ground conditions at the site indicate the presence of Hackney Gravel Member superficial deposits underlain by the London Clay and Lambeth Group over the Thanet Sand over the Chalk Group. Made Ground of variable thickness is anticipated to be present across the site based on the identified site history.

The PRA has identified potential contaminant linkages with a maximum 'moderate' risk classification. Based on the results of the PRA, it is considered that there are unacceptable risks (ref. *LCRM* guidance) so ground investigation is recommended. Appropriately targeted ground investigation should be undertaken for geo-environmental purposes to enable a refinement of the CSM and geo-environmental assessments. The next stage of geo-environmental assessment should include GQRA. The recommended ground investigation and assessments should be undertaken and presented in a geo-environmental interpretive report in accordance with *BS10175:2011 Investigation of Potentially Contaminated Sites – Code of Practice* and *LCRM* guidance.

The risk represented by potential ACMs in the current building fabric can be addressed by commissioning an asbestos Demolition and Refurbishment Survey for the relevant areas of the current building to be demolished and / or renovated. It is considered that appropriate ACM removal will be required prior to any phases of demolition. If ACMs are identified then their onward management should be informed by an asbestos specialist.

A new basement is to be incorporated into the proposed development. As indicated in *BRE 211: Radon – Guidance on Protective Measures for New Buildings (2023)*, all basements are at increased risk of elevated levels of radon, regardless of geographic location. Therefore, despite the radon risk mapping, it is recommended that appropriate radon protection is provided for the new basement unless further assessment can demonstrate it is not needed. If radon protection is used, then an appropriate radon protection strategy which is compatible with the building waterproofing should be developed by a suitable waterproofing and radon specialist.

The final specification for newly installed water supply pipes should be based on the risk assessments and recommendations presented herein and also agreed with the utility provider. It is anticipated that uprated water supply pipe construction may be necessary.

Risks to site workers and the environment (from potential land contamination) during the construction phase of the proposed redevelopment can be appropriately managed by successful implementation of construction phase RAMS. The associated construction phase risks from potential contamination should be appropriately considered and mitigated by the Principal Contractor in their preparation and implementation of construction phase RAMS and CPP.

This desk study should be made available to those preparing the operational site Health & Safety File for the proposed development.

Brimstone has recommended for a Stage 2 Detailed Risk Assessment in order to further assess the risk to proposed works. In lieu of a Detailed Risk Assessment, Brimstone recommends on-site support for any planned ground works.

Should any changes be made to the proposed development compared to the details presented herein, or should any new information become available, then the assessments included in this desk study must be updated.

The Client should inform A2SI of the foundation termination depths once final designs have been prepared so that no requirement for a foundation works risk assessment can be confirmed.

Appendix A: Qualitative Risk Assessment Matrix

A2SI qualitative risk assessment for geo-environmental purposes is undertaken in accordance with *CIRIA C552: Contaminated Land Risk Assessment, A Guide to Good Practice (Rudland et al., 2001)*. The CIRIA C552 risk categories and the assessment methodology are summarised below in Table A.1, Table A.2 and Table A.3. Potential magnitude and potential likelihood are both classified to enable a risk rating to be assessed.

Potential magnitude takes into account the potential consequences should a complete source–pathway–receptor linkage be present. Potential magnitude is classified as per Table A.1.

Table A.1 Definition of potential magnitude of consequence

Category	Definition
Severe	Acute risks to human health, catastrophic damage to buildings / property, major pollution to controlled waters.
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures.
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures.
Minor	Damage to non-sensitive ecosystems or species.

Potential likelihood takes into account the presence of the hazard and receptor as well as the integrity of the pathway for exposure, i.e., whether a source-pathway-receptor linkage is present or not. Potential likelihood is classified as per Table A.2.

Table A.2 Definition of potential likelihood of exposure

Category	Definition
High Likelihood	Pollutant linkage may be present and is almost certain to occur in the long-term. Or there is evidence of harm to the receptor.
Likely	Pollutant linkage may be present, and it is probable that it will occur over the long-term.
Low Likelihood	Pollutant linkage may be present, and there is a possibility that it will occur, although there is no certainty that it will do so.
Unlikely	Pollutant linkage may be present, but it is improbable that it will occur.

The potential magnitude of consequence and the potential likelihood of exposure are assessed in accordance with the risk matrix presented in Table A.3.

Table A.3 Geo-environmental risk assessment matrix

		Potential Magnitude of Consequence			
		Severe	Medium	Mild	Minor
Potential Likelihood of Exposure	High Likelihood	Very High	High	Moderate	Low to Moderate
	Likely	High	Moderate	Low to Moderate	Low
	Low Likelihood	Moderate	Low to Moderate	Low	Very Low
	Unlikely	Low to Moderate	Low	Very Low	Very Low

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

A2 Site Investigation

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.
