

## Residential Range

Contrasol are technical experts in the design, manufacture and supply of engineered, architectural solar shading and bespoke metalwork for residential and commercial buildings.

We are a UK manufacturer and invest heavily in new technologies, equipment and expertise; all our projects are managed from one of four regional offices strategically placed across England and Scotland.

Contrasol provide a comprehensive range of products that help bring shading, comfort and privacy into the home. The range includes state-of-the-art bespoke shutters, brise soleil systems, balustrades, and canopies, all manufactured with a sleek, minimal framework to meet building regulations such as Part L. In addition, we also offer a bespoke in-house design service, employing energetic, talented designers and mechanical engineers to create contemporary and technologically advanced pergolas for virtually any space. We work closely with leading architectural practices across the world, using the latest CAD and 3D software to design and build unique and intelligent solutions for award-winning buildings.

Find out more about using our products and services to help you to meet shading, ventilation and privacy requirements on the Contrasol website.

### Services Provided
