

Objection to Planning Application 2024/1039/P

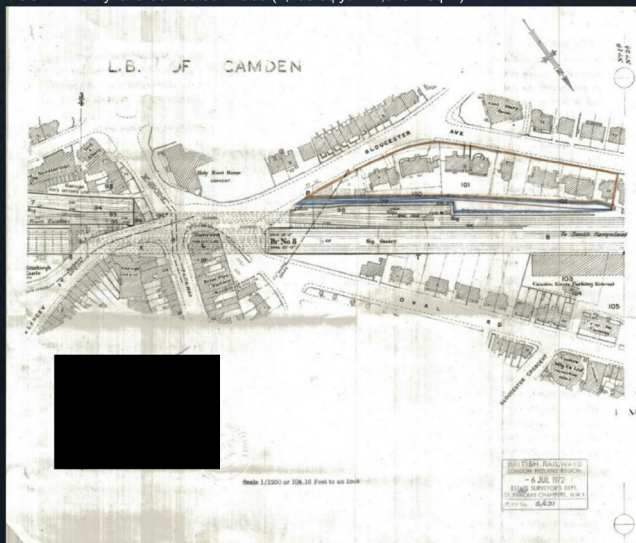

1 Amenity Land to rear of Darwin Court owned by BlackRock

Original owner of Amenity Land: Network Rail
 Current owner of Amenity Land: BlackRock
 Size of Amenity Land: 2,205 sq yd/ 1,843.7 sq m

Below: Original Lease of amenity land

Below: Amenity land delineated in blue (2,205 sq yd = 1,843.7 sq m)

2

INCORRECT Proposal for rear amenity land

The current proposal does not take into account the blue outlined amenity land that belongs to BlackRock.

The indicative overlay of the amenity land owned by BlackRock shows a clash with the proposed Bin Area.

The proposed landscaping to the rear will need to be re-submitted to show the available amenity land and the amenity land owned by BlackRock.

Competence issue: Airspace Group no filing history on Company House

The Airspace Group Ltd was established in December 2022. No trading history has been filed on Company House. Yet Airspace Group claim to be the experts in modular construction and delivery of such proposal.

If this expertise was obtained via a different company this isn't explained on their website.

In addition to the lack of Due Diligence regarding the amenity land matter, the lack of believable information such as Construction Methodology, Risk Assessment in line with proposed timelines this creates further concern on Airspace Group's lack of competence.

Airspace Group Ltd.

Airspace Group is a specialist consultancy and development company focused on achieving building owners on how to transform existing assets into valuable assets with minimal disruption, and delivering complete building developments. We provide expert advice that enables clients to make informed decisions on the viability and potential benefits of existing developments, and have various models to help them come to fruition.

The impetus for this type of development is often a need to carry out improvements to existing buildings and enhancing the value of the asset allows these improvements to be realised.

We have unparalleled experience in existing developments in London and a proven track record of successful existing developments. We specialise in [existing developments](#) which essentially minimises disruption and without build time, covering a robust focused way of achieving existing developments.

10. Further Technical Matters.

Off-site Modular Construction.

Airspace Group are experts in off-site modular construction for existing developments. This method of construction has clear advantages:

- Modules are built in a precise, clean, factory environment, ensuring a very high finish.
- Less waste and more efficiency means a more sustainable construction methodology.
- Meticulous planning and preparation means that there are no surprises on site.
- On-site work is extremely fast - a single apartment can be delivered and installed in a day.
- Less noise and disruption on site - the roof is the end of a production line, not a building site.

The Process for construction is as follows:

- 1. Planning and Design Phase**
Estimated 6 months from Planning Consent.
- 2. Preparation of the roof**
6 months Small crew - limited noisy machinery. Works to existing buildings also undertaken. Lift extensions approx. 6-8 weeks per building.
- 3. Installation of modules**
3-2 weeks. Modules pre-fitted in the factory. Approximately 1 apartment cased per day.
- 4. Final fit-out and completion**
A further 3-6 weeks of internal fitting out is required before the apartments are complete. Works to existing buildings also completed in this timeframe where possible.

1. Planning & Design

2. Preparation of the Roof

3. Module Installation (Note: design indicative only).

4. Fit-out and Completion (Note: design indicative only).

Request for Construction Methodology & Risk Assessment

Due to the lack of information provided Airspace Group should provide a detailed Construction Methodology incl. the corresponding Risk Assessment to explain how the attached high-level Construction programme is to be achieved.

The Principal Contractor should be confirmed in line with the information request above.

10. Further Technical Matters.

Indicative Programmes.

The adjacent programmes indicate the anticipated construction timelines.

The indicative single building programme shows the works in a typical building. Overall we anticipate each building would take 5-6 months on site, with the majority of this time being non-disruptive works. The most significant disruption will be caused by works to the lifts, which should take 6-8 weeks.

It should be noted that works to each building are generally discrete items, and it is envisaged that works in any one building will not affect residents in the other buildings. Residents in block A, for example, will not experience disruption whilst works are undertaken to blocks C, D and E.

The intention is to stagger works to the buildings such that the overall programme lasts around 14 months, but by working on a building by building basis will create less disruption for residents.

Programme is of course subject to change following detailed design and market conditions, but the adjacent programmes are intended to give an indication of how the project will be delivered in order to minimise disruption to residents as much as possible.
