

Fit for purpose

Vengen²⁸ is a high quality, double glazed and thermally broken aluminium louvre window system offering a unique solution for both natural and smoke ventilation applications.

Vengen²⁸ is available in bespoke sizes, and in an extensive range of colours and finishes. It can be configured for multiple applications to suit the exact requirement.

In today's environmentally conscious economy, Vengen²⁸ provides a natural, cost effective and low carbon solution to ventilation in modern buildings. It represents the culmination of years of design excellence from Naco, one of the world's leading suppliers of creative air solutions.

Providing a one-stop solution embracing bespoke installations and one off job specific applications, Naco has unrivalled British manufacturing experience and practical expertise in the louvre market. We're a pioneer and an innovator who is able to meet individual needs, yet has the backing and resources of an established international group.

Why Naco?

Experience

We are the longest established British glass louvre specialist, with over 55 years manufacturing know-how and unrivalled knowledge of this market. This is channelled into the design and manufacture of industry leading products.

Totally bespoke

We'll listen, and work with you to deliver exactly what you want. Our extensive range of options and ancillary products means we're able to help you create the definitive tailor made solution.

Delivery

We are the only glass louvre specialist with UK manufacturing capability. This, coupled with a commitment to working with you to meet - or exceed - your project timescales, gives you a reliable source of supply, especially for when dates and plans come under pressure.

Design and installation

Our experienced team of consultants will ensure you have access to industry leading expertise. Unlike most UK louvre companies, we offer the whole service - from pre-design consultancy through to drawing, supply and installation, coupled with design, co-ordination then install and commission of a fully tested control system, we ensure the system operates exactly as designed.

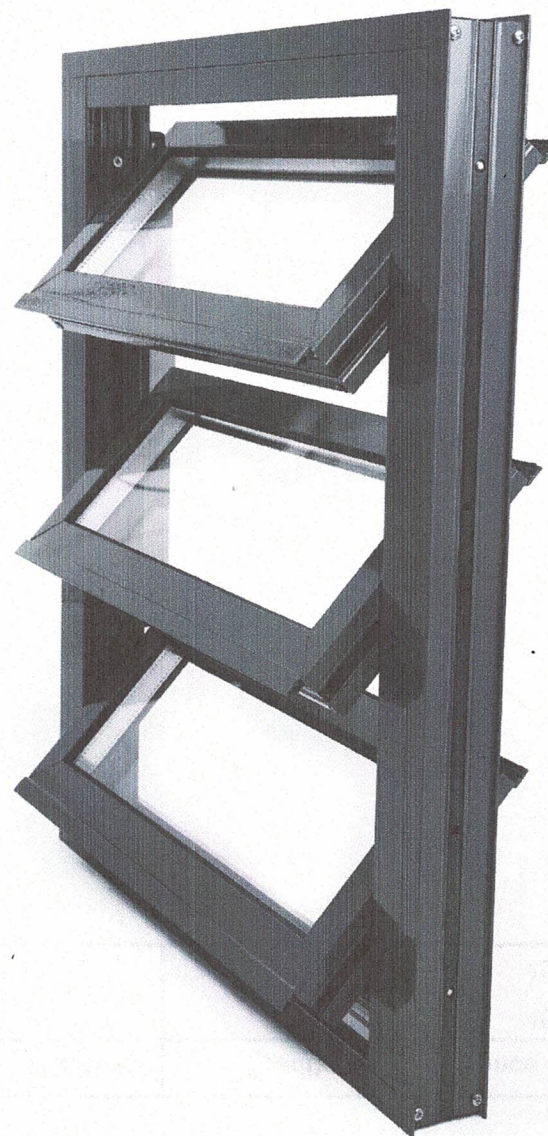

Standards

We are a ISO 9001 and ISO 14001 registered company.

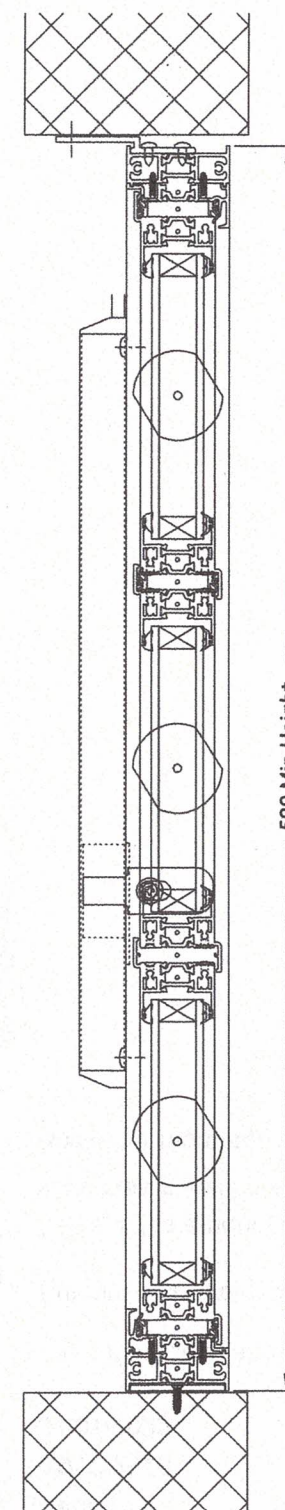

We are also Safe Contractor and Constructionline accredited.

Features

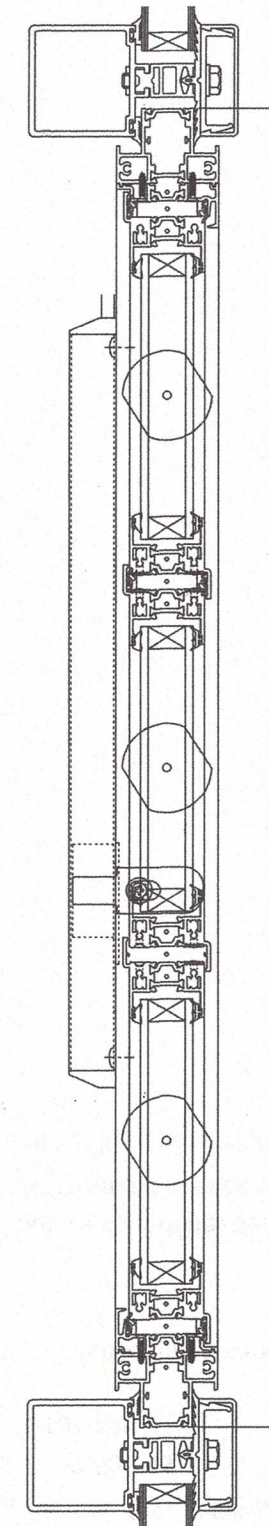

- Manual operation
- Automated operation
- EN12101-2 tested
- CE Marked
- Application specific options
- Multiple infill options
- Range of standard and bespoke finishes
