2024/1540/P	Graeme Blyth	19/05/2024 12:56:14	SUPPRT	It's great to see the council investing in energy efficiency and taking action against climate change, making a historic building sustainable. The solar panels will help fix electricity costs at a low and predictable level - as well as the obvious benefit of being carbon free. The new glass will help solve the growing problem of classrooms overheating in the Summer, which can lead to curtailment of teaching, so this is an investment in education too. The plans also look sensitive to any conservation concerns people might have. I strongly support them.
