## Control Document

### Project

The Garages, Frogna Lane, London NW3 6DN

### Document Type

Basement Impact Assessment

### Document Reference

21109/BIA Rev 2.1

### Document Status

Final

### Date

March 2024

### Prepared by

D V Tedesco MEng, PhD, Chlta, CEng MICE, RoGEP  
(dt@soilslimited.co.uk)

### Hydrogeology check by

C G Swainston BSc, PGCE, CGeol, FGS, MIAH

### First check by

Eur Ing R B Higginson BSc, PGDip, CEng, MICE, FGS.

### Second check by

L P Wilkinson BEng (Hons), MSc, FGS, MIMMM

This is not a valid document for use in the design of the project unless it is titled Final in the document status box.

Current regulations and good practice were used in the preparation of this report. The recommendations given in this report must be reviewed by an appropriately qualified person at the time of preparation of the scheme design to ensure that any recommendations given remain valid in light of changes in regulation and practice, or additional information obtained regarding the site.

## Executive Summary

### Proposed Development

Demolition of existing garages and the erection of 2 x dwellinghouses (Class C3), garages, and associated works.

### Summary of the Site Investigation

The ground conditions encountered were Made Ground (1.3m thick) directly overlaying the cohesive bedrock of the London Clay Formation which persisted beyond the base of the investigatory holes (1.00m – 8.00m bgl). The inferred mechanical behaviour of the soils of the London Clay Formation was representative of the low side of the usual range for similar soils. This could be caused by the site located immediately downslope of areas identified at risk of slope instability and could even represent colluvial soils.

Groundwater was not encountered at the time of drilling but was monitored within the installed wells at 1.50m below ground level in the worst-case. It was likely to represent surface water infiltrating into the wells. Roots and rootlets were encountered to 5.00m bgl.

Medium volume change potential was observed for the cohesive soils of the London Clay Formation.

### Foundation Strategy

The most suitable foundation strategy was represented by piled foundations due to the presence of soils of poor mechanical behaviour. Piled walls also represent the most suitable option for the construction of basement walls and the stabilisation of the excavation.

### Flood Risk

A Flood Risk Assessment was carried out based on official data from the Environment Agency and the SFRA from the LB of Camden.

The site was identified in Flood Zone 1, an area with low probability of flooding, and had a surface of circa 400m<sup>2</sup>. The risk of flooding for the existing and proposed development was summarised below.

### Summary of Flood Risk

Source	Existing	After Mitigation
Surface Water	Very low	Very low
Rivers and Sea	Very low	Very low
Reservoir	Unlikely	Unlikely
Groundwater	Unlikely	Unlikely

### **Land Stability**

The proposed development must include a specialist design for the design of temporary and permanent support to prevent damages to roads, neighbouring properties and the slope. The use of a piled wall is recommended.

A Ground Movement Assessment was undertaken to demonstrate that the proposed development would not cause excessive damage to the most sensitive neighbouring structures. A satisfactory Burland's damage category of 1 (very slight damage) was calculated provided that suitable measures are put in place by designers and chosen contractor.

### **Recommendations**

Movement monitoring of ground, neighbouring and nearby structures should be undertaken before construction starts and continued through the construction phase and for an appropriate period thereafter to exclude damages to the structures induced by the proposed basement excavation and construction.

Recommendations and remedial actions in agreement with CIRIA C760 were provided to mitigate the risk for the development of unexpectedly large ground movements and to keep the eventual damage within the limits of cosmetic repairs.

**Commission**

This document comprises the Basement Impact Assessment (BIA) and incorporates the results, discussion, and conclusions to this intrusive works. General site data is recorded below:

---

<b>Commission Record</b>	
Client	Pollyshire Ltd
Site Name	The Garages, Froggnal Lane, London NW3 6DN
Grid Reference	TQ257853
Soils Limited Quotation Ref	Q27395, dated 16 <sup>th</sup> February 2023
Clients Purchase Order	Q27395, dated 12 <sup>th</sup> September 2023

---

The record of revision to this document is presented below:

---

<b>Record Of Revisions</b>		
<b>Revision</b>	<b>Date</b>	<b>Reason</b>

**Note(s):** The latest revised document supersedes all previous revisions of the BIA produced by Soils Limited.

---

**Limitations and Disclaimers**

The report was prepared solely for the brief described in Section 1.1 of this report.

The contents, recommendations and advice given in the report are subject to the Terms and Conditions given in Soils Limited's Quotation

Soils Limited disclaims any responsibility to the Client and others in respect of any matters outside the scope of the above.

This report has been prepared by Soils Limited, with all reasonable skill, care and diligence within the terms of the Contract with the Client, incorporation of our General Conditions of Contract of Business and taking into account the resources devoted to us by agreement with the Client.

The report is personal and confidential to the Client and Soils Limited accept no responsibility of whatever nature to third parties to whom this report, or any part thereof, is made known. Any such party relies on the report wholly at its own risk.

The Client may not assign the benefit of the report or any part to any third party without the written consent of Soils Limited.

The ground is a product of continuing natural and artificial processes. As a result, the ground will exhibit a variety of characteristics that vary from place to place across a site, and also with time. Whilst a ground investigation will mitigate to a greater or lesser degree against the resulting risk from variation, the risks cannot be eliminated.

The investigation, interpretations, and recommendations given in this report were prepared for the sole benefit of the Client in accordance with their brief. As such these do not necessarily address all aspects of ground behaviour at the site.

Current regulations and good practice were used in the preparation of this report. An appropriately qualified person must review the recommendations given in this report at the time of preparation of the scheme design to ensure that any recommendations given remain valid in light of changes in regulation and practice, or additional information obtained regarding the site.

If the term "competent person" is used in this report or any Soils Limited document, it means an engineering geologist or civil engineer with a minimum of three years post graduate experience in the understanding and application of the appropriate codes of practice.

Unless the site investigation works have been designed and specified in accordance with EC7, this report is a Geotechnical Investigation Report and is not necessarily a Ground Investigation Report as defined by EC7 (Eurocode 7 Part 1, §3.4, Part 2, §6.1) or a Geotechnical Design Report (Eurocode 7 Part 1, §2.8) as defined by Eurocode 7 and as such may not characterise the ground conditions and additional works may be required to comply with the requirements of EC7.

Within the report reference to ground level relates to the site level at the time of the investigation, unless otherwise stated.

Exploratory hole is a generic term used to describe a method of direct investigation. The term trial pit, borehole or window sample borehole implies the specific technique used to produce an exploratory hole.

The depth to roots and/or of desiccation may vary from that found during the investigation. The Client is responsible for establishing the depth to roots and/or of desiccation on a plot by plot basis prior to the construction of foundations. Supplied site surveys may not include substantial shrubs or bushes and is also unlikely to have data on any trees, bushes or shrubs removed prior to or following the site survey.

Where trees are mentioned in the text this means existing trees, substantial bushes or shrubs, recently removed trees (approximately 20 years to full recovery on cohesive soils) and those planned as part of the site landscaping).

The geotechnical laboratory testing was performed by GEO Site & Testing Services Ltd (GSTL) in accordance with the methods given in BS 1377:1990 Parts 1 to 8 and their UKAS accredited test methods.

For the preparation of this report, the relevant BS code of practice were adopted for the geotechnical laboratory testing technical specifications, in the absence of the relevant Eurocode specifications (ref: ISO TS 17892).

The chemical analyses were undertaken by Derwentside Environmental Testing Services (DETS) in accordance with their UKAS and MCERTS accredited test methods or their documented in-house testing procedures. This investigation did not comprise an environmental audit of the site or its environs.

Deleterious materials may be present in any Made Ground that pose a potential risk to site workers, end users and adjacent vulnerable receptors. These could include a range of contaminants, including asbestos, especially if the material includes large fractions of demolition derived materials.

Ownership of copyright of all printed material including reports, survey data, drawings, laboratory test results, trial pit and borehole log sheets, including drillers log sheets remains with Soils Limited. License is for the sole use of the client and may not be assigned, transferred or given to a third party. This license is only valid once we have been paid in full for this engagement. In the event of non-payment for our services, we reserve the right to retract the license for all project data, preventing their use and any reliance upon such data by the client or any other third party. We may also contact parties other than the client to notify them of this retraction.

## Section I Introduction

### I.1 Scope

Soils Limited was commissioned by Pollyshire Ltd to undertake a BIA for the proposed basement development at The Garages, Frogna Lane, London NW3 6DN.

The report provides details on the local hydrology, geology and hydrogeology, and potential impact to neighbours and the wider environment.

This BIA comprises the following elements:

- Desk Study,
- Screening,
- Scoping,
- Site investigation, monitoring, and interpretation,
- Impact assessment.

It is recognised that any BIA is a live document and that further detailed assessments will be ongoing, if appropriate, as design and construction progresses.

No Preliminary Investigation Report or chemical analysis was undertaken by Soils Limited with regard to ground contamination, as this did not form part of the Client's brief.

### I.2 Sources of Information

The primary sources of information used within this report are:

1. British Geological Survey Website (accessed November 2023),
2. Existing and Proposed Layout Plans (Appendix E),
3. EA Website (accessed November 2023),
4. Defra Magic Map (accessed November 2023),
5. Google Earth™ (accessed November 2023),
6. The Lost Rivers of London, Historical Publications Ltd, 1992, N Barton,
7. National Library of Scotland (accessed November 2023),
8. London Borough of Camden Strategic Flood Risk Assessment (SFRA) maps (accessed November 2023),
9. Camden Geological, Hydrogeological and Hydrological Study (CGHHS), Arup,
10. Bomb Damage Maps, The London County Council,
11. Redington and Frogna (RedFrog) Neighbourhood Plan 2011,
12. RedFrog sub-surface Water Features Mapping. 2016 ARUP.

### 1.3 Site Description

The site comprised a row of eight garages with a front concrete driveway, directly accessed from Frognal Lane. The driveway of the easternmost garage was estimated at an elevation of circa 81m AOD according to elevation data from Google Earth™, while the westernmost garage was located at an elevation of circa 79m AOD. Private gardens were present to the rear at an elevation of between 79m and 77m AOD from east to west. Vegetation was represented by sparse mature and immature trees along the public road and by hedges and mature trees within the private gardens of neighbouring properties. The site was set in a predominantly residential area and was bounded to the north-east by Ashley Court, to the south-west by 18-28 Palace Road and to the south by Palace Road rear garden. To the north the garages were bounded by Frognal Lane, with further residential buildings beyond it.

The total area of the site was ~400m<sup>2</sup>, almost entirely covered by hardstanding.

The site lies just within the area covered by the RedFrog Neighbourhood Plan.

An aerial photograph of the site and its close environs has been included in Figure 2.

### 1.4 Proposed Development

The proposal comprised the demolition of the existing garages and the construction of a part two, part three storey semi-detached residential property with basement and above ground garages. The basement was proposed under the whole building and front garden/driveway footprint and albeit a cross-section of the building was not available at the time of writing this report it was considered to extend to a depth not exceeding 3.50m below ground level. The total proposed area covered by the building footprint and hardstanding was ~300m<sup>2</sup>.

In compiling this report reliance was placed the existing and development plans provided by the Client. A list of provided documents are presented in Table 1.1.

The development plans provided by the Client are presented in Appendix E.

**Table 1.1 Provided Documents**

<b>Document</b>	<b>Reference No.</b>	<b>Rev.</b>	<b>Date</b>	<b>Author</b>
Filed Plan of Title	406520	-	02/04/2021	HM Land Registry
Proposed Development Plans (updated)	-	-	March 2024	TODD Architects

The recommendations provided within this report are made exclusively in relation to the scheme outlined above and must not be applied to any other scheme without further consultation with Soils Limited. Soils Limited must be notified about any change or deviation from the scheme outlined.

## Section 2      Desk Study

### 2.1      Site History

A review was undertaken of available historic OS mapping and aerial photography, using the following resources, National Library of Scotland, and Google Earth™ (GE).

The age of the property was determined to have been built in the late 1960s. A summary of pertinent information from the available OS maps and aerial photography are provided in Table 2.1.

**Table 2.1 Site History**

Map	Description
OS 1840s-1880s	The site was open land.
OS 1888-1914	One building present to the immediate south of the site. No structures reported onsite.
OS 1937-1965	Previously existing building demolished and rows of buildings apparently similar to the current ones present along Frogmal Lane (north, south-west and north-east) and Finchley Road (south). No structures were reported onsite.
OS 1944-1972	The local site layout appeared to match the current one.
Aerial 2020	No evident changes.

### 2.2      Published Geological Data

The 1:50,000 BGS map showed the site to be located directly upon the bedrock of the London Clay Formation with no anticipated overlying superficial deposit or thick artificial deposits. This was the same information given in the RedFrog Neighbourhood Plan.

To the north and at a higher elevation than the site the Claygate Beds outcrop, these form the upper part of the London Clay Formation and comprise silts and clays with subordinate bands of sand.

#### 2.2.1      London Clay Formation

The London Clay Formation comprises stiff grey fissured clay, weathering to brown near surface. Concretions of argillaceous limestone in nodular form (Claystones) occur throughout the formation. Crystals of gypsum (Selenite) are often found within the weathered part of the London Clay, and precautions against sulphate attack to concrete are sometimes required.

The upper boundary member of the London Clay Formation is known as the Claygate Member and marks the transition between the deep water, predominantly clay environment and succeeding shallow-water, sand environment of the Bagshot Formation.

The lower boundary is generally marked by a thin bed of well-rounded flint gravel and/or a glauconitic horizon. The formation overlies the Harwich Formation or where the Harwich Formation is absent the Lambeth Group.

In the north London area the upper part of the London Clay Formation has been disturbed by periglacial action and may contain pockets of sand and gravel.

### 2.3 Web Published Geology

A review of historic boreholes was undertaken to provide information on the expected ground conditions. No useful boreholes were present within 200m of the site. Reference was given to BGS boreholes TQ28NE129 and TQ28NE130 (>10m deep), which however were located at >300m to the south-east and at a much lower elevation. The stratigraphy from the two boreholes, however, confirmed the absence of superficial deposits and the site to be set on the bedrock London Clay Formation. The following sequence of strata was found:

- Made Ground: 0.9m to 1.8m bgl,
- London Clay Formation: >15m bgl,

The top layers of the London Clay Formation were identified as very weathered and potentially included soliflucted/colluvial materials.

#### 2.3.1 Groundwater

The BGS boreholes reported groundwater at depths of 1.5m and 11.1m bgl.

### 2.4 Topography

The site elevation ranged between 77m and 79m AOD in the rear garden and between 79m and 81m AOD at the front driveways (based on Google Earth™ elevation data). Frogna Lane was estimated sloping downwards on a north-east to south-west direction according to an average angle of circa 5°, with a maximum slope angle of circa 6°. The wider area was also sloping downward in a south-westerly direction with a similar average slope angle. Areas with steeper slopes were also locally present.

### 2.5 Hydrogeology

The Environment Agency has produced an aquifer designation system consistent with the requirements of the Water Framework Directive. The designations have been set for superficial and bedrock geology and are based on the importance of aquifers for potable water supply and their role in supporting water bodies and wetland ecosystems.

The London groundwater model was generally split into three aquifers, the Upper, Intermediate and Lower Aquifer.

- The Upper Aquifer comprises groundwater within the superficial River Terrace Deposits, which were not anticipated by the BGS in this area as well as the Claygate Beds and Bagshot Beds that are at outcrop to the north east of the site. The underlying London Clay Formation acts as an aquiclude to the underlying Intermediate and Lower Aquifers.
- The Intermediate Aquifer was generally associated with granular layers within the Lambeth Group.
- The Lower Aquifer was principally associated with the Chalk (approximately 130m deep) but can include the overlying Thanet Formation.

No superficial River Terrace Deposits were anticipated at this site so the presence of large volumes of groundwater must be considered as unlikely. In the London Clay minor seepages could take place within sand lenses, which should remain laterally discontinuous and self-limiting.

Any water infiltrating the cohesive London Clay Formation will generally tend to flow either with the topography or vertically downwards at a very slow rate towards the Intermediate and subsequently Lower Aquifer. Data for the London Clay Formation indicates horizontal permeability of between  $10^{-7}$  m/s close to the surface decreasing to  $10^{-11}$  m/s at depth.

Groundwater was anticipated to be flowing in a south-west direction in alignment with the topography.

The Arup CGHHS maps confirmed the site to be set on unproductive strata and outside of any Source Protection Zones.

## **2.6 Hydrology**

The nearest surface water feature was the Whitestone Pond, located at >1000m to north-east at an elevation of ~134m AOD.

Based on the Arup's CGHHS maps the site was outside the catchment of the pond chains on Hampstead Heath.

The site lies within the extent of the lost rivers of London mapping (Lost Rivers of London, N Barton). According to the map extract in the Arup's CGHHS the area of Frogmal Lane was not affected by the presence of lost rivers, with branches of the Kilburn anticipated at >100m to both the north-west and south-east and at a lower elevation.

RedFrog Hydrogeological mapping – Results Map 2016 ARUP (12) shows the site was remote from the 'lost rivers' of Kilbourne and its tributaries, the River Westbourne and its branches and that springs shown to the NE of the site are associated with the London Clay/ Claygate Beds junction.

This was supported by RedFrog sub-surface Water Features Mapping. 2016 ARUP (12) that the site was not on an indicative spring area. This would be associated with the London Clay/Claygate beds boundary upslope of the site to the north-east. The Claygate Beds are clays with seams and bands of silt and sand which create higher permeability pathways. The London Clay is predominantly a silty clay with a very low permeability. This is the classic condition for a spring line and is found over the wider London area, both north and south of the river where this geological boundary occurs.

The flow path analysis result. 2016 ARUP (12) shows modified flow paths overlain on terrain mapping and gives the same information as given the Results Map. The flow paths are remote from the site.

## 2.7 Flood Risk

The risk of flooding was assessed taking account of the information available from the EA flood maps and the London Borough of Camden SFRA.

The site was situated in Flood Zone 1, an area with a very low probability of flooding from rivers and seas. The EA and SFRA showed the site to have a very low risk from surface water flooding and negligible risk from groundwater and reservoir flooding. The nearest historic groundwater flood incident was >500m to the east. Very low risk was also associated to internal and external sewer flooding. The site fell within the critical drainage area of Group3\_010 but outside of any Local Flood Risk Zone.

Extracts of the mentioned flood zone and flood risk maps are presented in Figure 3 to Figure 11.

In summary, the site of interest lies within Flood Zone 1, has an area of less than 1 hectare but fell into a critical drainage area. Therefore, the undertaking of a detailed site-specific flood risk assessment could be required by the Council, albeit this could be discarded because of the very low to negligible risk of flooding from all other sources.

**2.8 Listed Buildings & Structures**

The nearest listed building was the St Andrew's United Reform Church, which was a grade II listed building and located at circa 15.60m northwest based on plans provided by the Client.

**2.9 Underground Infrastructure**

The Transport for London asset map showed no nearby underground infrastructure.

Information on the presence of public utilities, such as sewers or water mains, was not available at this stage.

**2.10 Unexploded Ordnance (UXO)**

Review of Zetica UXO online risk maps indicated the site to be within a moderate to high risk area from bomb strikes. The Bomb Damage Maps from the LCC indicated the area for the proposed development as unaffected by bomb damages. The fact that the site was redeveloped after WWII also further reduces the potential for UXO to be present but does not preclude it.

## Section 3      Screening

### 3.1 Introduction

The Ove Arup 2008 Scoping Study prepared for the London Borough of Camden and the 2021 Camden Planning Guidance: Basements require that any development proposal that includes a subterranean basement should be screened to determine whether or not a full BIA is required.

Screening tools are included in the Arup document (Ref: Camden geological, hydrogeological and hydrological study, Issue01/November 2010) and the CPG, comprising a series of questions within a screening flowchart for three categories: Groundwater Flow, Land Stability and Surface Flow and Flooding. Responses to the questions are tabulated below.

### 3.2 Groundwater Flow

The response to the Groundwater Flow screening assessment is given in Table 3.1.

**Table 3.1 – Subterranean (Ground Water) Flow Screening**

Question	Response
1a. Is the site located directly above an aquifer?	No – The site was set directly onto the bedrock London Clay Formation, classified by the EA as an aquiclude.
1b. Will the proposed basement extend beneath the water table surface?	<b>Unknown</b> – The basement could extend beneath the water table if groundwater is present.
2. Is the site within 100 m of a watercourse, well (used/ disused) or potential spring line?	No – The nearest surface water feature was >1000m to north-east.
3. Is the site within the catchment of the pond chains on Hampstead Heath?	No – The CGHHS showed that the site fell outside the catchment of the pond chains on Hampstead Heath.
4. Will the proposed basement development result in a change in the proportion of hard surfaced / paved areas?	No – the hard surfaced areas will not increase based on drawings provided by the client.
5. As part of the site drainage, will more surface water (e.g. rainfall and run-off) than at present be discharged to the ground (e.g. via soakaways and/or SUDS)?	No – The site drainage will not include infiltration SuDS, with surface water collected and delivered to public sewer subject to agreement with the asset owner.
6. Is the lowest point of the proposed excavation (allowing for any drainage and foundation space under the basement floor) close to or lower than, the mean water level in any local pond or spring line?	No – No local ponds or spring lines in the immediate surroundings of the site.

### 3.3 Land Stability

The response to the Land Stability screening assessment is given in Table 3.2.

**Table 3.2 – Land Stability Screening**

<b>Question</b>	<b>Response</b>
1. Does the existing site include slopes, natural or manmade, greater than 7° (approximately 1 in 8)?	No – The average slope angle did not exceed 5°.
2. Will the proposed re-profiling of landscaping at the site change slopes at the property boundary to more than 7° (approximately 1 in 8)?	No – Site re-profiling was not part of the proposal.
3. Does the development neighbour land, including railway cuttings and the like, with a slope greater than 7° (approximately 1 in 8)?	No – No significant changes to the average slope angle in the neighbouring properties.
4. Is the site within a wider hillside setting in which the general slope is greater than 7° (approximately 1 in 8)?	No – The general slope angle was circa 5°. Areas identified at risk of instability were located outside the area of influence of the proposed development.
5. Is the London Clay the shallowest strata at the site?	<b>Yes</b> – The BGS anticipated the site to be set directly on the London Clay Formation.
6. Will any trees be felled as part of the proposed development and / or are any works proposed within any tree protection zones where trees are to be retained?	No – No trees were present within the area of the proposed interventions.
7. Is there a history of seasonal shrink-swell subsidence in the local area and / or evidence of such effects at the site?	No – No evidence of subsidence at the site.
8. Is the site within 100 m of a watercourse or potential spring line?	No – The nearest surface water feature was >1000m to north-east.
9. Is the site within an area of previously worked ground?	No – The BGS did not anticipate the site to fall into an area characterised by thick worked ground.
10. Is the site within an aquifer? If so, will the proposed basement extend beneath the water table such that dewatering may be required during construction?	No – The site was set directly onto the bedrock London Clay Formation, classified by the EA as an aquiclude.
11. Is the site within 50m of the Hampstead Heath ponds?	No – The Hampstead Heath ponds were >1000m away from the site.
12. Is the site within 5 m of a highway or pedestrian right of way?	<b>Yes</b> – The site adjoined Frogmal Lane.
13. Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?	<b>Unknown</b> – The neighbouring properties do not seem to include basements following a visual inspection and search on the Council's planning portal.
14. Is the site over (or within the exclusion zone of) any tunnels, e.g. railway lines?	No – No underground infrastructures anticipated by TFL within the area of influence of the proposed development.
<b>Note:</b>	

### 3.4 Surface Flow and Flooding

The response to the Surface Flow and Flooding screening assessment is given in Table 3.3.

**Table 3.3 – Surface Flow and Flooding Screening**

<b>Question</b>	<b>Response</b>
1. Is the site within the catchment of the pond chains on Hampstead Heath?	No – The CGHHS showed that the site fell outside the catchment of the pond chains on Hampstead Heath.
2. As part of the proposed site drainage, will surface water flows (e.g. volume of rainfall and peak run-off) be materially changed from the existing route?	No – The amount of hard-surfaced area will not change and surface water will be delivered to the public sewer.
3. Will the proposed basement development result in a change in the proportion of hard surfaced / paved external areas?	No – The amount of hard-surfaced area will not change.
4. Will the proposed basement development result in changes to the profile of the inflows (instantaneous and long term) of surface water being received by adjacent properties or downstream watercourses?	No – The proposed basement will not change the proportion between paved and unpaved areas and watercourses are located at great distance.
5. Will the proposed basement result in changes to the quality of surface water being received by adjacent properties or downstream watercourses?	No – There are no elements suggesting that the proposed development could affect the quality of surface water.
6. Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature?	<b>Yes</b> – The area was identified at very low risk of flooding from surface water. Groundwater flooding risk was negligible.

### 3.5 Non-technical Summary of Screening Process

Based on the screening exercise, further stages of the basement impact assessment are required. A summary of the basement impact assessment requirements has been provided in Table 3.4, Table 3.5 and Table 3.6.

**Table 3.4 – Groundwater Flow**

<b>Item</b>	<b>Description</b>
<b>Q1b</b>	<b>Unknown</b> – The basement could extend beneath the water table if groundwater is present.

**Table 3.5 – Land Stability**

<b>Item</b>	<b>Description</b>
<b>Q5</b>	<b>Yes</b> – The BGS anticipated the site to be set directly on the London Clay Formation.
<b>Q12</b>	<b>Yes</b> – The site adjoined Froggnal Lane.
<b>Q13</b>	<b>Unknown</b> – The neighbouring properties do not seem to include basements following to visual inspection and search on the Council's planning portal.

**Table 3.6 – Surface Flow and Flooding Screening**

<b>Item</b>	<b>Description</b>
<b>Q6</b>	<b>Yes</b> – The area was identified at very low risk of flooding from surface water. Groundwater flooding risk was negligible.

## Section 4      Scoping

### 4.1 Introduction

The purpose of scoping is to assess in more detail the issues of concern identified in the screening process (i.e. where the answer is “yes” or “unknown” to any of the questions posed) to be investigated in the impact assessment. Potential hazards are assessed for each of the identified potential impact factors.

The scoping stage is furthermore to assist in defining the nature of the investigation required to assess the impact of the issues of concern identified in the screening process.

### 4.2 Potential Impacts

The following potential impacts were identified in Table 4.1.

**Table 4.1 – Potential Impacts**

Screening Flowchart Question	Potential Impacts	Discussion
Will the proposed basement extend beneath the water table surface?	The existing basement could extend into an underlying aquifer and thus affect the groundwater flow regime.	The data available from the BGS/EA anticipated the site to be set into/ono soils of very low permeability and characterised by negligible risk of flooding from groundwater.
	Alteration of an existing groundwater flow regime, which in turn could potentially cause local increase or decrease of groundwater levels.	Ground investigation recommended to confirm soil stratigraphy and groundwater levels.  <b>Effects to be mitigated based on the results of site-specific observations and subsequent design</b>
Is the London Clay the shallowest strata at the site?	Damage to foundation due to volume change potential.	Ground investigation to confirm soil stratigraphy and volume change potential.  <b>Effects to be mitigated based on the results of site-specific observations and subsequent design.</b>
Is the site within 5 m of a highway or pedestrian right of way?	Excavation of a basement could result in structural damage to the roads/ footways or buried services.	Intrusive investigation to confirm ground conditions for a site-specific design.  Ground Movement Assessment to estimate the potential damage to surrounding structures.
Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?	Basement construction can result in undermining of foundations of neighbouring properties and cause excessive ground movements resulting in structural instability.	Design of adequate temporary and permanent support and use of best practice construction.  <b>Effects to be mitigated based on the results of site-specific observations and dedicated design</b>

<b>Screening Flowchart Question</b>	<b>Potential Impacts</b>	<b>Discussion</b>
Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature?	Changes to hard surfaces could affect the way rainfall and surface water are transmitted away from the property and could adversely impact the local risk of flooding.	Ground investigation to confirm soil conditions and groundwater levels via the installation and monitoring of wells to evaluate suitability of in situ soils for naturally storing or draining surface water.  Drainage design to manage surface water storage and delivery to public sewer to reduce the risk of flooding. Basement to incorporate positive pumping and waterproof construction,
<b>Effects mitigated at design stage.</b>		

## Section 5 Site Works

### 5.1 Proposed Project Works

The proposed intrusive investigation was designed to provide information on the ground conditions and to aid the design of foundations for the proposed residential development. The intended investigation, as outlined within the Soils Limited quotation (Q27395, dated 16<sup>th</sup> February 2023), was to comprise the following items:

- 3No. windowless sampler boreholes, maximum 6.0m deep
- 3No. super-heavy dynamic probes (DPSH), maximum 6.0m deep
- 3No. groundwater monitoring wells, maximum 6.0m deep
- 1No. post site work groundwater level monitoring visit
- Geotechnical laboratory testing.

#### 5.1.1 Actual Project Works

The actual project works were undertaken on 3<sup>rd</sup> October 2023, with subsequent sample logging, laboratory testing, monitoring, and reporting. The actual works comprised:

- 2No. windowless sampler boreholes, 6.0m deep
- 1No. windowless sampler borehole, 1.0m deep
- 2No. super-heavy dynamic probes (DPSH), 6.0m deep
- 1No. super-heavy dynamic probe (DPSH), 8.0m deep
- 2No. groundwater monitoring wells, 6.0m deep
- 1No. post site work groundwater level monitoring visit
- Geotechnical laboratory testing.

Two windowless sampler boreholes (WS1 and WS2) were backfilled with gravel and bentonite following the installation of monitoring wells, one borehole (WS3) was backfilled with gravel.

All exploratory hole locations have been presented in Figure 12.

Following completion of site works, soil cores were logged and sub sampled so that samples could be sent to the laboratory for both contamination and geotechnical testing.

### 5.2 Ground Conditions

On 3<sup>rd</sup> October 2023 three windowless sampler boreholes (WS1 – WS3) were drilled, using a Premier 110 Compact type rig, to depths of between 1.00m (WS3) and 6.00m (WS1 and WS2) below ground level (bgl) at locations selected by Soils Limited using a development plan provided by the Client.

Two standpipes were installed within window sample borehole locations (WS1 and WS2) to allow for continued monitoring of groundwater, if present.

Three super heavy dynamic probes (DP1 – DP3) were driven prior and adjacent to their

corresponding windowless sampler borehole to depths ranging between 6.00m (WS2 and WS3) and 8.00m bgl (WS1).

The maximum depths of exploratory holes have been included in Table 5.1.

All exploratory holes were scanned with a Cable Avoidance Tool (C.A.T.) and GENNY prior to excavation to ensure the health and safety of the operatives.

**Table 5.1 Final Depth of Exploratory Holes**

<b>Exploratory Hole</b>	<b>Depth (m bgl)</b>	<b>Exploratory Hole</b>	<b>Depth (m bgl)</b>
WS1 <sup>w</sup>	6.00	DPI	8.00
WS2 <sup>w</sup>	6.00	DP2	6.00
WS3	1.00	DP3	6.00

**Note(s):** <sup>w</sup> - well installation. The depths given in this table are taken from the ground level on-site at the time of investigation.

The approximate exploratory hole locations are shown on Figure 12.

The soils encountered from immediately below ground surface have been described in the following manner. Where the soil incorporated an organic content such as either decomposing leaf litter or roots or has been identified as part of the in-situ weathering profile, it has been described as Topsoil both on the logs and within this report. Where man has clearly either placed the soil, or the composition altered, with say greater than an estimated 5% of a non-natural constituent, it has been referred to as Made Ground both on the log and within this report.

For the purposes of discussion, the succession of conditions encountered in the exploratory holes in descending order can be summarised as:

**Made Ground (MG)  
London Clay Formation (LCF)**

The ground conditions encountered in the exploratory holes are summarised in Table 5.2.

**Table 5.2 Ground Conditions**

<b>Strata</b>	<b>Depth Encountered (m bgl)</b>		<b>Typical Thickness (m)</b>	<b>Typical Description</b>
	<b>Top</b>	<b>Bottom</b>		
MG	GL	1.00 <sup>1</sup> – 1.60	1.30	Concrete over yellow, sharp gravelly SAND to very soft to soft, orangish brown, sandy CLAY.
LCF	1.15 – 1.60	1.00 <sup>1</sup> – 6.00 <sup>1</sup>	Not proven <sup>2</sup>	Firm to stiff and very stiff, brown mottled grey silty CLAY with lenses of fine sand.

**Note(s):** <sup>1</sup> Final depth of exploratory hole. <sup>2</sup> Base of strata not encountered. The depths given in this table are taken from the ground level on-site at the time of investigation.

The soil conditions encountered were recorded and soil sampling commensurate with the purposes of the investigation was carried out. The depths given on the exploratory hole logs and quoted in this report were measured from ground level.

For more complete information about the soils encountered within the general area of the site reference must be made to the detailed records given within Appendix B.

**5.3 Ground Conditions Encountered in Exploratory Holes**

The ground conditions encountered in exploratory holes have been described below in descending order. The engineering logs are presented in Appendix B.1.

**5.3.1 Made Ground**

Soils described as Made Ground were encountered in all the three windowless sampler boreholes from ground level to depths ranging between 1.00m, the final depth of WS3, and 1.60m bgl (WS2).

The Made Ground typically comprised concrete over yellow, sharp gravelly SAND to very soft to soft, orangish brown, sandy CLAY. Sand was fine. Gravel was fine to coarse, locally cobble sized, sub-rounded to angular flint, brick and concrete.

The established depth of Made Ground found at each exploratory hole location have been included in Table 5.3.

**Table 5.3 Established Depth of Made Ground**

<b>Exploratory Hole</b>	<b>Depth (m bgl)</b>
WS1	1.15
WS2	1.60
WS3	1.00 <sup>1</sup>

**Note(s):** <sup>1</sup> Final depth of exploratory hole.

**5.3.2 London Clay Formation**

Soils described as London Clay Formation were encountered in windowless sampler boreholes WS1 and WS2 from directly below the Made Ground to the final investigated depth of 6.00m bgl. The presence of soils of the London Clay Formation was also inferred from the results of dynamic probing at all the three locations (DP1 – DP3) to the base of the investigation ranging between 6.00m (DP2 and DP3) and 8.00m bgl (DP1).

The London Clay Formation typically comprised firm to stiff and very stiff, brown mottled grey silty CLAY with lenses of fine sand.

The established depth of the London Clay Formation found at each exploratory hole location have been included in Table 5.4.

**Table 5.4 Established Depth of London Clay Formation**

<b>Exploratory Hole</b>	<b>Depth (m bgl)</b>
WS1/DPI	6.00 <sup>1</sup> /8.00 <sup>1</sup>
WS2/DP2	6.00 <sup>1</sup> /6.00 <sup>1</sup>
WS3/DP3	1.00 <sup>1</sup> /6.00 <sup>1</sup>

**Note(s):** <sup>1</sup> Final depth of exploratory hole.

#### 5.4 Roots

Roots were encountered in all the three windowless sampler boreholes at depths ranging between 1.00m, the final depth of WS3, and 5.00m bgl (WS1 and WS2). The established depth of root penetration found at the exploratory hole locations has been included in Table 5.5.

**Table 5.5 Established Depth of Root Penetration**

<b>Exploratory Hole</b>	<b>Depth (m bgl)</b>
WS1	5.00
WS2	5.00
WS3	1.00 <sup>1</sup>

**Note(s):** <sup>1</sup> Final depth of exploratory hole.

Roots may be found to greater depth at other locations on the site particularly close to trees and/or trees that have been removed both within the site and its close environs.

It must be emphasised that the probability of determining the maximum depth of roots from a narrow diameter borehole is low. A direct observation such as from within a trial pit is necessary to gain a better indication of the maximum root depth.

#### 5.5 Groundwater

Groundwater was not encountered at the time of drilling within any of the windowless sampler boreholes.

Further groundwater monitoring was conducted within the standpipes installed on site following completion of site works and has been presented in Table 5.6.

**Table 5.6 Groundwater Monitoring**

<b>Exploratory Hole</b>	<b>Well Depth (m bgl)</b>	<b>Depth to Water (m bgl)</b> <b>25/10/2023</b>
WS1	6.00	3.19
WS2	6.00	1.50

Changes in groundwater level occur for reasons including seasonal effects and variations in drainage. The investigation was conducted in October (2023), when groundwater levels should be rising from their annual minimum (lowest) elevation, which typically occurs around September to the annual maximum (highest) which typically

occurs around March.

Soils Limited remain available for the undertaking of additional monitoring visits, if required. It is the Client's responsibility to keep the monitoring wells safe and accessible.

Considering that predominantly cohesive and low permeability soils were observed at the depths where groundwater was recorded, it is possible that the findings represent surface water inside the monitoring wells or minor seepage, laterally limited, within the sandy lenses of the London Clay Formation.

Groundwater equilibrium conditions may only be conclusively established, if a series of observations are made via groundwater monitoring wells.

## Section 6 Geotechnical In-Situ and Laboratory Testing

### 6.1 Dynamic Probe Tests

The results were converted to equivalent SPT “N60” values based on dynamic energy using commercial computer software (Geostru). The results were then interpreted based on the classifications outlined in Appendix C.1, Table C.1.1 and Table C.1.2.

**Table 6.1 SPT Hammer Efficiency**

Rig Reference	Energy Ratio Er (%)
Premier I	90.25

**Table 6.2 Inferred SPT Interpretation**

Strata	Inferred N60 Range	Cohesive Soils	
		Classification	Inferred Cohesion (Cu)
LCF	4 - 13	Low to medium	20 – 65kPa

**Note(s):** SPT “N60” values presented have been corrected in accordance with BS EN 22476 Part 3

A full interpretation of the DPSH tests, are outlined in Appendix C.2, Table C.2.1.

### 6.2 Atterberg Limit Tests

Atterberg Limit tests were performed on four samples obtained from the London Clay Formation. The results were classified in accordance with BRE Digest 240 and NHBC Standards Chapter 4.2.

**Table 6.3 Atterberg Limit Results Classification**

Strata	Depth (m bgl)	Classification	
		NHBC	BRE 240
LCF	1.60 – 2.60	Medium	Medium

A full interpretation of the Atterberg Limit tests, are outlined in Table C.2.2, Appendix C.2 and the laboratory report in Appendix C.1.

### 6.3 Sulphate and pH Tests

Water soluble sulphate (2:1) and pH testing in accordance with Building Research Establishment Special Digest 1, 2005, ‘Concrete in Aggressive Ground’.

**Table 6.4 Sulphate and pH Test Results**

Strata	Depth (m bgl)	Sulphate Concentration (mg/l)	pH
LCF	1.30 – 2.20	33 - 342	7.3 – 7.4

The significance of the sulphate and pH Test results are discussed in Section 8.3 and the laboratory report in Appendix C.1.

## Section 7 Engineering Appraisal

### 7.1 Established Ground Conditions

An engineering appraisal of the soil types encountered during the site investigation and likely to be encountered during the redevelopment of this site is presented. Soil descriptions are based on analysis of disturbed samples taken from the exploratory holes.

#### 7.1.1 Made Ground and Topsoil

Soils described as Made Ground were encountered in all the three windowless sampler boreholes from ground level to depths ranging between 1.00m, the final depth of WS3, and 1.60m bgl (WS2).

Foundations must not be placed on non-engineered fill unless such use can be justified on the basis of a thorough ground investigation and detailed design. Foundations must be taken through any Topsoil and/or Made Ground and either into, or onto a suitable underlying natural stratum of adequate bearing characteristics.

#### 7.1.2 London Clay Formation

Soils described as London Clay Formation were encountered in windowless sampler boreholes WS1 and WS2 from directly below the Made Ground to the final investigated depth of 6.00m bgl. The presence of soils of the London Clay Formation was also inferred from the results of dynamic probing at all the three locations (DP1 – DP3) to the base of the investigation ranging between 6.00m (DP2 and DP3) and 8.00m bgl (DP1).

The soils of the London Clay Formation were classified as low to medium undrained strength and inferred undrained cohesion of between 20kPa and 65kPa, generally increasing with depth. The site location was identified as falling immediately outside the area identified by the Arup's CGHHS maps as at risk of land instability and therefore the upper weak soils may represent colluvium (Colluvium is a general name for loose, unconsolidated sediments that have been deposited at the base of hillslopes by either rainwash, sheetwash, slow continuous downslope creep, or a variable combination of these processes.)

Soils of the London Clay Formation are overconsolidated cohesive soils and as such are expected to display low to moderate bearing capacities with moderate to high settlement characteristics at this specific site due to the inferred poor mechanical behaviour. The soils of the London Clay Formation were not considered suitable for the adoption of shallow foundations or strip foundations within the basement excavation at this site, but can be suitable for the use of piled foundations.

#### 7.1.3 Guidance on Shrinkable Soils

The ground conditions were established as Made Ground, with a typical thickness of 1.30m, overlying the bedrock of the London Clay Formation.

The volume change potential for each strata was established and presented in Table 7.1.

**Table 7.1 Established Volume Change Potential by Strata**

<b>Strata</b>	<b>Volume Change Potential</b>		<b>Established Lower Boundary (m bgl)</b>
	<b>BRE</b>	<b>NHBC</b>	
LCF	Medium	Medium	Not determined

**7.1.4 Groundwater**

Groundwater was not encountered during the drilling of the windowless sampler boreholes, but was recorded at depths of 1.50m and 3.19m bgl within the standpipes installed onsite during the monitoring visit undertaken on 25<sup>th</sup> October 2023.

Groundwater is typically at the highest level in March and April and further monitoring is advised.

Considering that predominantly cohesive and low permeability soils were observed at the depths where groundwater was recorded, it is possible that the findings represent surface water inside the monitoring wells or minor seepage, laterally limited, within the sandy lenses of the London Clay Formation.

## Section 8 Foundation Scheme

### 8.1 Foundation Recommendations

Foundations **must not** be constructed within any Made Ground/Topsoil and soils of the London Clay Formation characterised by unexpectedly poor mechanical behaviour, as this could be caused by the presence of colluvial soils.

Roots were encountered in all the three windowless sampler boreholes at depths ranging between 1.00m and 5.00m bgl. If roots are encountered during the construction phase foundations **must not be placed within any live root penetrated** or desiccated **cohesive soils or those with a volume change potential**. Should the foundation excavations reveal such materials, the excavations **must** be extended to greater depth in order to bypass these unsuitable soils. Excavations must be checked by a suitable person prior to concrete being poured.

Considering the type of development and the characteristics of the local area, the use of piles must be recommended for both building foundations and basement walls. Soils Limited were not appointed for the design of piled foundations. It is recommended that suitable insitu tests, such as SPT tests, are undertaken to suitable depth in order to enable the design of pile bearing capacity.

The proposed development is likely to be both light and brittle. It is therefore considered that foundation design is undertaken using NHBC Standards Chapter 4.2.

#### 8.1.1 Stability Issues Due To Construction

The excavation of the basement must not affect the integrity of any adjacent structures or land beyond the site boundaries. Where there is a sufficient distance between the site boundary and the basement excavation, support may be permitted using a wide strip foundation to form an earth retaining structure. In other cases, the most suitable form of construction could be within a coffer dam structure using a sheet piles, secant or contiguous concrete piled wall around the periphery of the structure, which in this specific case represents the most suitable solution.

Generally cantilevered piled walls have an open face to embedded ratio of about one to two i.e. a supported face 3.50m in height would require a penetration into the ground, below the base of the excavation, of about 7.00m, however, deflection for this minimum depth of penetration were likely to be outside of tolerable limits. Should the piled wall be purely an unsupported cantilever then it is likely that quite deep section sheet piles or large diameter bored piles would be required. Installing a braced waling to the wall could reduce the sheet section, or diameter of the piles.

The excavation of the proposed basement was estimated at 3.50m bgl. Groundwater was monitored at a minimum depth (highest elevation) of 1.50m bgl within the standpipe monitoring well installed in WS2. Water ingress must be prevented by dewatering during construction, either by exclusion, extraction, or a combination.

Groundwater levels could rise, particularly after prolonged periods of wet weather.

If the construction works take place during the winter months or during/after prolonged periods of wet weather perched water could accumulate or groundwater could be found migrating through granular Made Ground or more granular deposits of the London Clay Formation (Claygate Member), if present. If any water ingress is not prevented by dewatering, the basement slab could become “buoyant” whilst empty. This must be taken into account in the design. Support of excavation and dewatering with pumps from sumps introduced into the floor of the excavation must be considered.

## **8.2 Slope Stability Analysis**

The site location was identified as falling immediately outside the area identified by the Arup’s CGHHS maps as at risk of land instability and therefore the upper weak soils may represent colluvium.

Natural slopes, in cohesive soils in England, typically stand with a factor of safety against sliding of about one during periods when the groundwater is at or close to ground level. Factors such as drainage installed into the slope and foliage can enhance the overall or local stability of the slope but generally only marginally.

Interference by man in the profile of a natural slope, the groundwater regime in or around the slope, or in the loading on a slope, can initiate both local and/or overall instability. Natural erosional processes, such as a river or the sea eroding the toe of a slope can, and does, initiate instability.

Manmade slopes, such as railway cuttings, can be stable over long periods of time and then fail decades after their construction (due to equalisation of pore water pressures within the slope). Embankments, if not properly engineered can have failures in the short-term due to excess porewater pressures being setup during construction.

Analyses of slopes generally takes the form of a back analyses of the existing ground profile to permit an assessment of the strength parameters within the soil mass being estimated. Laboratory testing, of various forms depending on the slope type or failure, of soils samples taken through the ground section is then undertaken and the strength parameters found compared to those estimated from the back analyses. The comparison may then be used to provide background data to establish the failure mechanism, to design remedial works or to check the factor of safety against failure of a standing slope. Slope stability analysis must consider the stability of the site and land both upslope and downslope of it.

Initial design parameters can be taken from published values for the residual strength of the London Clay Formation and worst-case assumptions of winter groundwater levels, though these would need to be verified by laboratory analysis and groundwater monitoring.

**8.3 Subsurface Concrete**

The sulphate and pH tests carried out in accordance with BRE Special Digest 1, 2005, 'Concrete in Aggressive Ground', established the site concrete classifications for each stratum as presented in Table 6.4.

**Table 8.1 Concrete Classification**

<b>Stratum</b>	<b>Design Sulphate Class</b>	<b>ACEC Class</b>
LCF	DS-I	AC-Is

**Note:** Static groundwater case considered in presence of cohesive soils of very low permeability.

Concrete to be placed in contact with soil or groundwater must be designed in accordance with the recommendations of Building Research Establishment Special Digest 1 2005, 'Concrete in Aggressive Ground' taking into account any possible exposure of potentially pyrite bearing natural ground and the pH of the soils.

**8.4 Excavations**

Shallow excavations in the Made Ground/Topsoil and London Clay Formation are likely to be marginally stable in the short term at best.

Deeper excavations taken into the London Clay Formation are likely to be unstable and require support, particularly any excavation running across the slope. Unsupported earth faces formed during excavation may be liable to collapse without warning and suitable safety precautions must therefore be taken to ensure that such earth faces are adequately supported or battered back to a safe angle of repose.

Excavations beneath the groundwater table are likely to be unstable and dewatering of foundation excavations may be necessary.

## Section 9 Basement Impact Assessment

### 9.1 Mitigation of Adverse Effects

This section of the report addresses the potential impacts identified by the scoping study and the relevant findings of the ground investigation and mitigation measures, where required.

#### 9.1.1 Groundwater Flow

The following potential impacts were identified during the screening and scoping study.

- Will the proposed basement extend beneath the water table surface?

The ground conditions were established to be Made Ground, with an average thickness of 1.30m, overlying the cohesive soils of the London Clay Formation, persisting below the base of the investigatory holes and to depths more than 8.00m bgl. The proposed basement development was assumed to extend to a depth of circa 3.50m bgl, with a surrounding piled retaining wall.

Groundwater was not recorded during the drilling of the boreholes but was recorded at the time of the monitoring visit at a minimum depth of 1.50m bgl. Depending on the cohesive nature of the soils encountered and on the negligible risk of flooding from groundwater (source EA and SFRA) that this finding was likely to represent surface water trapped within the standpipes.

**Mitigation:** The established ground conditions confirmed the site to be set within cohesive soils of the London Clay Formation of very low permeability. Groundwater flows in similar conditions would be extremely slow and the construction of basements, isolated or in groups, would have negligible influence on them.

Eventual localised water strikes would be caused by surface water runoff seeping through potential granular lenses. The granular lenses would be laterally discontinuous and the flows intermittent, therefore could be controlled by means of localised pumping.

No further mitigation required.

#### 9.1.2 Land Stability

The following potential impacts were identified during the screening and scoping study.

- Is the London Clay the shallowest strata at the site?
- Is the site within 5 m of a highway or pedestrian right of way?
- Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?

The site investigation showed the soils of the London Clay Formation to be medium volume change potential. The proposed basement excavation and construction would affect the adjoining Frogmal Lane and the buildings at Ashley Court (north-east) and 18-28 Palace Road (south-west). The influence on the St Andrew's United Reform Church,

a Grade II Listed Building, would be limited because located at a distance of circa 15.60m from the excavation.

**Mitigation:** Foundations must be designed for a medium volume change potential in accordance with NHBC Standards Chapter 4.2 where they pass through the London Clay Formation.

Structural design and method statements must draw on established successful practices, with the use of suitable temporary and permanent support to prevent damage to roads and neighbouring properties or causing instability. Pre-start and completion surveys made of the adjoining properties. Monitoring of ground and structures to be undertaken before, during and for a sufficiently long period after the completion of the basement for the properties falling within the area of influence of the proposed development.

A ground movement assessment must be undertaken to evaluate the construction sequence and determine a damage category in accordance with the Burland Scale for the most sensitive buildings.

### 9.1.3 Surface Flow and Flooding

The following potential impacts were identified during the screening and scoping study.

- Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature?

The EA and SFRA recorded the site as characterised by very low risk of flooding from surface water. Albeit located within critical drainage area of Group3\_010 the site fell outside of any Local Flood Risk Zone.

The site was already predominantly hard landscaped and the proposed development would not significantly alter the ratio between paved and unpaved areas. In addition, the site sloped downwards in a south-westerly direction, limiting the risk of surface water ponding.

Any water infiltrating the London Clay Formation will flow at an extremely slow rate, limiting surface water infiltration, therefore remaining hydraulically separated from eventual shallow groundwater.

**Mitigation:** Surface water must be managed and collected into the public sewer and drainage system, subject to approval. Eventual surface water entering the excavation must be pumped out to protect the health and safety of the operators.

## 9.2 Cumulative Effects on Groundwater Flow

A search done using the London Borough of Camden planning portal did not confirm the presence of basements under the neighbouring buildings. The proposed basement therefore would be isolated and not cause significant alteration to the existing

groundwater regime, especially when considering the predominantly cohesive and very low permeability of the soils encountered. The risk of cumulative effects on groundwater would therefore be negligible to very low.

### **9.3 Stability**

The site was not set into an area identified at risk of landslides from the CGHHS. The slope gradient onsite and immediately offsite, within the area of influence of the proposed development, did not exceed 1 in 8. Areas recorded at risk of slope instability however were identified further to the upslope of the site, however the shallow soils of the London Clay Formation encountered during the site investigation could potentially represent colluvium.

The assessment undertaken by Soils Limited concluded that the proposed development is to be set on piles and that piled walls are recommended for keeping the basement excavation stable. The installation of piles would also positively affect the risk of slope instability because the piles will be installed before the development of the excavation, therefore before inducing any eventual destabilisation. Pile design should be undertaken to resist lateral forces.

## Section 10 Ground Movement Assessment

### 10.1 Introduction

A ground movement assessment was carried out to provide an estimate of the expected damage on the most sensitive neighbouring properties due to the excavation and construction of the proposed basement development. The ground movement assessment was developed on the basis of information on basement geometry from the Client and their Consultants. For the elements not yet available at the time of writing this BIA assumptions were made on the basis of the current construction practice and literature, when available.

Detrimental effects can manifest as cracking and more serious structural damage. Many old buildings do exhibit signs of historic movement and repair. In practice, it is often difficult to attribute cracks visible in a structure to specific site construction activities unless a detailed survey of the affected structure and its founding strata had been undertaken before the construction works.

Any observed changes in the state of the building can then be causally linked to the works with more confidence and less debate than if no pre-works condition survey had been undertaken. Surveys require the cooperation of the property owners, as entry by surveyors into the property will be necessary. This would normally be undertaken in collaboration with the neighbour's party wall surveyors.

Close supervision will be made during the construction phase. Movement monitoring of ground, neighbouring and nearby structures will be undertaken before construction starts and continued through the construction phase and for an appropriate period thereafter.

The data from the site investigation has established soil and groundwater conditions. The client's engineer can prepare working drawings and construction method statements that will mitigate adverse effects of nearby properties.

This section provides calculations to determine ground movements that may result from the construction of the proposed basement development and to assess how these may affect the stability of neighbouring buildings. Movements are likely to occur through the following mechanisms.

#### 10.1.1 Movements due to Pile Installation

The installation of piles or diaphragms to form basement walls. In the case of bored piles, the drilling activities may cause movements because of the loss of support induced by the migration of soils to provide support in adjacent ground. The use of pile casing or support fluid can reduce the movements. The use of CFA piles and the adoption of particular attention against flouting risk could significantly reduce the movements.

#### 10.1.2 Heave Movements

The construction of the proposed development will require the excavation of the soil under the area currently occupied by the garages and the front concrete pavement. Soil

removal was evaluated as not exceeding 3.50m. Cross sections of the proposed development were not available to Soils Limited at the time of writing this BIA, therefore the excavation was considered stepped into the sloping site in order to allow flat access to the garages proposed on the two sides of the building. The excavation will cause the unloading of the cohesive soils of the London Clay Formation beneath formation level. The London Clay Formation persisted beyond the maximum depth of the investigatory holes of 8.00m bgl and the available BGS boreholes showed it to be >15m thick in the local area.

### **10.1.3 Foundation Construction**

Construction of foundations can lead to movements due to basement wall construction and any net increase in loading. The proposed foundations, however, will be piled raft therefore foundation loads will be taken to soils of good mechanical behaviour at greater depth, reducing the effects onto shallow soils.

The nature of final movements depends on the level of loading achieved. Downward movements (settlements) must be expected when the applied load is greater than the weight of soil removed. A certain degree of heave will remain in the long term when the applied load is lower than the weight removed. Settlement may potentially also occur where foundation loads are transferred to deeper, previously unloaded soil.

The ground movement assessment considered the pile loads applied according to the Equivalent Raft method. The total pile length was assumed as 15m and the pile loads were estimated as not exceeding 80kN, therefore the corresponding equivalent raft load was calculated as 12.27kPa at a depth of 11.17m bgl (2/3 of pile length below basement formation).

Workmanship will not affect the adjoining structures as the proposed basement construction will not include any underpinning implying the installation of dry pack between the existing foundations and the underpinning itself.

### **10.1.4 Lateral Wall Deflection**

The bending of the basement walls would directly cause lateral movements within the retained ground. The relaxation in the soils induced by the transition to the active state then causes the settlement of the soils within the failure wedge and of the structures set onto them.

## **10.2 Site Model and Mechanical Properties**

For this BIA, an average thickness of 1.30m of Made Ground was considered based on the site investigation undertaken. The Made Ground was observed as initially granular becoming predominantly cohesive with depth. A predominantly cohesive behaviour was conservatively considered in the analyses due to the absence of information on the mechanical properties of the granular Made Ground because of the excavation of starter pits at the dynamic probing locations. The Made Ground was found to overlie the cohesive bedrock of the London Clay Formation, which persisted beyond the maximum investigated depth.

The stratigraphy and the mechanical parameters of the soils involved in the analyses under undrained and drained conditions were respectively presented in Table 10.1 and Table 10.2 as obtained from the interpretation of dynamic probing data and comparison with the available literature. In particular, the soil parameters of the Made Ground were defined on the basis of reference values from CIRIA SP200, Table 5.4 due to the limited amount of testing available. The drained Young's modulus of the London Clay Formation was derived from the undrained one considering a conversion factor of 0.75, as per the recommended correlation presented in CIRIA SP200, Table 5.7.

**Table 10.1 – Soil Parameters – Undrained Conditions**

Stratum	Top of Stratum (m bgl)	Undrained Cohesion (kPa)	Young's Modulus (MPa)	Poisson's Ratio
MG	0.00	20	5	0.50
LCF <sup>1</sup>	1.30	25 + 3z	15.9 + 1.8z	0.50

**Note:** <sup>1</sup> z represented the depth from the top of the stratum.

**Table 10.2 – Soil Parameters – Drained Conditions**

Stratum	Top of Stratum (m bgl)	Friction Angle ( $\phi^\circ$ )	Effective Cohesion (kPa)	Young's Modulus (MPa)	Poisson's Ratio
MG	0.00	20	0	3	0.35
LCF <sup>1</sup>	1.30	22	0	11.9 + 1.4z	0.33

**Note:** <sup>1</sup> z represented the depth from the top of the stratum.

The soil parameters presented for the cohesive soils of the London Clay Formation were extremely conservative because they are representative of the low blow counts recorded from dynamic probing and lower than the lower bound of the reference values indicated in CIRIA SP200. The above values, however, can be adopted even in the case of degradation of the soil properties caused by the deposition of colluvial masses from the areas to the upslope, recognised as potentially affected by slope instability.

Groundwater was encountered at a minimum depth of 1.50m bgl in the wells installed onsite at the time of monitoring. The analyses in the ground movement assessment considered groundwater at ground level in the worst credible scenario and at 1.50m bgl in the moderately conservative scenario. Should groundwater be encountered during further monitoring visits or at the time of the excavation, this would not negatively impact the ground movements presented in this report.

### 10.3 Basement Construction

No details were available at the time of writing this report on structural design and construction sequence.

For this BIA the basement walls were assumed to be contiguous pile walls made up of 600mm diameter bored piles at 700mm centres, with the pile base set at a depth of

15.00m bgl. The second moment of inertia of the contiguous pile wall was calculated as 742,201cm<sup>4</sup>.

The following construction sequence was assumed in the analysis:

1. demolition of the existing garages;
2. installation of the contiguous pile wall;
3. construction of the pile capping beam;
4. excavation of narrow trenches for the installation of temporary props at the top of the wall;
5. excavation between ground level and 1.75m bgl inside the footprint of the proposed basement leaving berms along the entire perimeter of the excavation for retaining the soil passive resistance on the basement wall;
6. excavation of narrow trenches for the installation of an intermediate level of temporary props and of a suitable waling beam at 1.75m bgl;
7. after the completion of the waling beam, removal of the berms;
8. excavation between 1.75m and 3.50m bgl inside the footprint of the proposed basement leaving berms along the entire perimeter of the excavation for retaining the soil passive resistance on the basement wall;
9. excavation of narrow trenches for the installation of a level of temporary props and waling beam at the base of the excavation;
10. after the completion of the waling beam, removal of the berms between 1.75m and 3.50m bgl;
11. construction of the basement piled raft and removal of the temporary props at 3.50m bgl;
12. construction of the ground floor slab;
13. removal of the remaining temporary props, completion of the inner basement and construction of the above ground structures.

The proposed construction sequence was aimed at minimising the ground movements and is representative of a high-stiffness system as defined in CIRIA C760.

It is recommended to limit the width of the narrow trenches to the minimum possible for allowing the installation of the temporary props and waling beams to keep the effects as much localised as possible and reduce the development of significant movements.

After the installation of two adjacent props, the excavation should be extended along the wall to allow the positioning of the waling beam. The excavation can be then fully developed after completion of the temporary support and the subsequent excavation stage started according to the same procedure previously described.

The temporary props applied during the excavation cannot be removed from the walls before being replaced by suitable permanent supports or equivalent permanent restraints, before the concrete has reached a prescribed strength or when the Structural Engineers specify.

The proposed development considered the excavation of 3.50m of Made Ground, corresponding to an unloading of the soils at formation level evaluated as circa 65kPa, adopting for the removed soils an average unit weight of 18kN/m<sup>3</sup>.

A ground movement assessment has been undertaken using OASYS Limited PDISP (Pressure induced DISplacement analysis) analysis software for the evaluation of the vertical ground movements and WALLAP by Geosolve to calculate lateral ground movements from retaining wall lateral deflection. PDISP assumes that the ground behaves as an elastic material under loading, with movements calculated based on the applied loads and the soil stiffness ( $E_u$  and  $E'$ ) for each stratum input by the user. PDISP assumes perfectly flexible loaded areas and as such tends to overestimate movements in the centre of loaded areas and underestimate movements around the perimeters. If a different foundation/underpinning solution is adopted within the final design the ground movement assessment must be revised.

The construction of the proposed basement would interact with the neighbouring structures at Ashley Court and at 18-28 Palace Road. The nearest listed building was the St Andrew's United Reform Church, which was a grade II listed building and located at circa 15.60m northwest based on plans provided by the Client.

The most sensitive adjacent building, therefore, would be the adjacent property at 18-28 Palace Road, located to the south-west. No basement was anticipated beneath the building. The detail of the critical scenarios considered for the development of the Ground Movement Assessment (GMA) and the undertaking of the Damage Category Assessment (DCA) using the approach on CIRIA C760 and the Burland scale are provided below. The grade II listed building of St Andrew's URC was not considered as the most sensitive one because the ground movements caused by basement construction would reduce considerably along the 15.60m between the two structures.

#### **10.4 Critical Scenario CS1**

Critical scenario CS1 considered the effects of basement construction on the adjoining building at 18-28 Palace Road, which was located at a distance of circa 1.20m from the excavation. The critical distance adopted for the development of the GMA and the DCA was considered equal to an average of 19.10m based on documents received from the Client. The critical section considered in scenario CS1 is presented in Figure 13.

The excavations to the proposed basement formation level must be carried out by retaining the passive resistance of the soils in place, as prescribed In CIRIA C760.

It is the Client's responsibility to provide information on any changes to the layout and/or structural characteristics of the basement. Soils Limited must be immediately informed of any changes, as this could potentially invalidate the results of this Basement Impact Assessment.

An accurate monitoring of ground and structural movements is required before, during and for a certain period after the completion of the construction process to check that movements do not exceed those calculated and presented in this report and allow the design of remedial measures, should the calculated movement be exceeded. If a different construction process is adopted, Soils Limited must be immediately informed and a reassessment of ground movements and expected damage on neighbouring structures must be carried out.

## **10.5 Ground Movements**

The calculated ground movements deriving from the abovementioned mechanisms are summarised below. The input/output files from PDisp and Wallap are presented in Appendix D.

### **10.5.1 Movements due to Pile Installation**

The ground movements caused by bored pile installation were estimated using the reference plots in CIRIA C760, Figure 6.8 for the case of contiguous pile walls.

The vertical movement in correspondence of the piles was evaluated as 0.04% times the pile length and corresponded to 6.0mm, linearly reducing to zero at a distance of 30.0m (2 times the pile length).

The largest horizontal movement was estimated as 6.0mm (0.04% of the total pile length of 15.0m) in correspondence of the excavation and decreased to zero at a distance of 22.5m (1.5 times the pile length) according to a bi-linear plot.

### **10.5.2 Short Term Heave**

Calculated short term heave, due to the removal of soils above the formation level, was evaluated by adopting the parameters in Table 10.1 and intended as deriving from the unloading of the London Clay Formation.

The largest short-term heave across the footprint of the proposed development was predicted to be of a maximum of -14mm (negative values indicate an upwards movement throughout this text) near the centre of the excavation. The movement decreased towards the boundaries of the excavation, along the boundary lengths of the basement. Heave was noted to occur within these areas ranging between -8mm and -2mm due to the net increase of surcharge load. A contour plot showing the variation of short-term movements across the entire basement footprint is presented in Figure 14, which showed that ground movements reduce to zero within <8m from the excavation.

### **10.5.3 Long Term Ground Movement**

Long term movements generally depend on the development of the increase of heave (negative settlements) in the long-term due to the reduction in stiffness of the soils, with the dissipation of negative pore-water pressures, and the development of (positive) settlements due to the construction of the basement and the application of the loads from the upper structure to greater depths. Those movements develop contemporarily and generally cannot be distinguished, but an evaluation of the long-term heave, as

independent values, was also reported for completeness on the contour plot in Figure 15. The maximum expected heave was calculated as circa -25mm and was caused by the stress relief caused by up to 3.50m deep excavations. Ground movements dissipated to zero within <12m from the excavation.

The maximum overall long-term ground movements under the proposed building footprint were calculated as -23mm near the centre of the excavation. The variation of movements along the excavation boundaries ranged between -13mm and -8mm. A contour plot with the variation of long-term movements across the basement footprint is presented in Figure 16, which showed the ground movements reducing to zero within <12m from the excavation.

The above values of the ground movements were cumulative and, therefore, included long-term heave and settlements caused by the structural loads.

#### **10.5.4 Settlements Due To Workmanship**

No settlements due to workmanship were considered in this ground movement assessment, as no underpinning will be constructed and no dry pack will be rammed between existing foundations and underpinning.

#### **10.5.5 Movements Due to Retaining Wall Lateral Deflection**

The construction of the basement will comprise the installation of bored piles along the perimeter of the excavation. The deflection of basement walls directly causes the development of lateral movements and, as a consequence, of settlements in the surroundings of the basement.

The calculation of horizontal movements was carried out using Wallap by Geosolve. The maximum horizontal movement was evaluated as circa 9mm on the basis of the previously described construction sequence. A plot showing the basement wall deflection was presented in Figure 17.

The evaluation of the displacements induced by the basement wall lateral deflection was undertaken on the basis of the relationship presented in CIRIA C760, Figure 6.17 and the maximum settlement considered equal to 4.5mm.

### **10.6 Summary of Ground Movements**

The parameters for the London Clay soils were those for the weak soils at shallow depth. As the shear strength and stiffness increases with depth, as demonstrated by the inferred SPT N values, this was a high degree of conservatism. However, the ground movements and Burland classification were within limits.

The plot of the vertical movements previously summarised was presented in Figure 18. The structural loads from the development were to be transferred to the soil through the piles at depth. At a depth of 3.50m bgl the removed overburden from soil excavation developed heave in the long-term. Two scenarios were considered for determination of

the maximum vertical deflection across CS1. Scenario one including heave and scenario two excluding heave.

In scenario one combined movements included pile installation, vertical movements caused by lateral deflection and long-term movements from PDisp analysis. The maximum deflection was calculated as 5.1mm. The movements from pile installation and vertical movements from lateral deflection were settlements and long-term movement from PDisp heave.

In scenario two combined movements included pile installation and vertical movements caused by lateral deflection only, removing the heave developed during the long-term movements calculated in the PDisp analysis. The maximum deflection was calculated as 2.6mm.

Scenario one was considered the worst case with a maximum deflection of 5.1mm and this value was adopted for the vertical deflection and damage classification. The calculated deflection ratio for potential damage for CS1 is presented in Table 10.3.

**Table 10.3 – Summary of the Vertical Deflection at CSI**

Scenario	Critical Distance <sup>1</sup> (m)	Vertical Deflection (mm)	Deflection Ratio (%)	Distance from the Excavation <sup>2</sup> (m)
CSI	(1.20) + 19.10	5.1	0.027	5.00

**Note:** Vertical movements are reported as absolute values. <sup>1</sup> The distance in brackets did not contribute to the evaluation of the deflection ratio. <sup>2</sup> Distance between the section with maximum vertical deflection and the edge of the excavation.

The horizontal movements developing in correspondence of the basement wall were calculated as the sum of the maximum movements caused by bored pile installation (6mm) and the maximum movements calculated using Wallap as caused by the basement wall deflection (9mm). The horizontal movements, however, rapidly dissipate with the distance from the excavation according to a linear relationship, becoming null at a distance of four times the excavated depth as presented in CIRIA C760, Figure 6.15a. Based on that relationship, the horizontal movements in correspondence of the section of maximum vertical deflection were calculated as circa 9.7mm. In Table 10.4 was reported a summary of the horizontal movement in correspondence of the section of maximum vertical deflection and the related horizontal strain. The plot of horizontal movement is presented in Figure 19.

**Table 10.4 – Summary of the Horizontal Movement at CSI**

Scenario	Critical Distance <sup>1</sup> (m)	Horizontal Deflection (mm)	Horizontal Strain (%)	Distance from the Excavation <sup>2</sup> (m)
CSI	(1.20) + 19.10	9.7	0.051	5.00

**Note:** Vertical movements are reported as absolute values. <sup>1</sup> The distance in brackets did not contribute to the evaluation of the horizontal strain. <sup>2</sup> Distance between the section with maximum vertical deflection and the edge of the excavation.

### 10.7 Evaluation of the Damage Category

The acceptance criteria for basement developments in the London Borough of Camden consider valid proposals producing an expected damage on the neighbouring structures not exceeding Burland Category 1 (very slight). The assessment was carried out considering the method described in CIRIA C760, based upon the method proposed by Burland et al. (2001) and taking into account the works by Burland and Wroth (1974) and Boscardin and Cording (1989).

The general categories of damage entity were summarised in Table 10.5.

**Table 10.5 – Classification of Visible Damage To Walls**

<b>Category</b>	<b>Description</b>
0 (Negligible)	Negligible – hairline cracks
1 (Very slight)	Fine cracks that can easily be treated during normal decoration (crack width <1mm)
2 (Slight)	Cracks easily filled, redecoration probably required. Some repointing may be required externally (crack width <5mm)
3 (Moderate)	The cracks require some opening up and can be patched by a mason. Recurrent cracks can be masked by suitable linings. Repointing of external brickwork and possibly a small amount of brickwork to be replaced (crack width 5 to 15mm or a number of cracks > 3mm).
4 (Severe)	Extensive repair work involving breaking-out and replacing sections of walls, especially over doors and windows (crack width 15mm to 25mm but also depends on number of cracks).
5 (Very severe)	This requires a major repair involving partial or complete re-building (crack width usually >25mm but depends on number of cracks).

The expected damage must be evaluated on the basis of the specific ratio between critical section length (L) and building height (H). The average height of the building at 18-28 Palace Road was evaluated as circa 18.0m.

The specific L/H ratio for CS1 was calculated in Table 10.6 and the damage category was evaluated considering the reference plot for L/H = 1.00.

**Table 10.6 – Calculated L/H Ratio**

<b>Section</b>	<b>Critical Distance (m)</b>	<b>Building Height (m)</b>	<b>Calculated L/H Ratio</b>
CSI	19.10	18.00	1.06

The results of the assessment were presented in Table 10.7, while in Figure 20 was defined the expected damage category on the neighbouring structure.

**Table 10.7 – Expected Damage Category**

<b>Section</b>	<b>Critical Distance (m)</b>	<b>Horizontal Deflection (mm)</b>	<b>Vertical Deflection (mm)</b>	<b>Horizontal Strain <math>\epsilon_h</math> (%)</b>	<b>Deflection Ratio <math>\Delta/L</math> (%)</b>	<b>Damage Category</b>
CSI	19.10	9.7	5.1	0.051	0.027	I (Very slight)

**Note:** Vertical and horizontal movements are reported as absolute values. The distance from the excavation did not contribute to the evaluation of horizontal strain and deflection ratio.

### 10.8 Monitoring of Ground and Structures

Anticipated ground movements are expected to be minimal and reduced by the stiffness of the above structure and those adjoining.

Soils Limited were not appointed for the development of a monitoring strategy. The following comments were provided as a broad outline.

It is recommended to appoint a specialist Surveyor for monitoring ground and structural movements at regular intervals to confirm limits presented in this report are not exceeded.

Movement monitoring of the property itself and nearby structures within a radius of 20m must be undertaken before construction starts, continued through the construction phase and for an appropriate period thereafter. The Surveyor will be required to monitor ground movements to check the validity of the ground movement analysis, the performance of the temporary works and working methods adopted by the chosen Contractor.

The proposed monitoring must also include:

- Visual inspection of relevant walls with a condition survey produced of each wall prior to work commencing,
- Vertical movement of each wall must be monitored using as a minimum standard optical equipment,
- Lateral movement must be measured using laser systems.

The movement monitoring instrumentation must provide a  $\pm 1$ mm minimum accuracy.

Prior to works the chosen contractor shall define the monitoring survey scheme and should undertake at least 3No. surveys for averaging the values and establish base readings.

During construction a minimum of 1No. set of readings should be obtained on a weekly basis, albeit 2No. sets per week should be preferred at the initial stages of the excavation to confirm the suitability of the temporary works.

After the completion of the construction stage the monitoring activities could be carried out according to 1No. set of readings per month. The monitoring can then cease after observing no significant movement between two consecutive readings.

A traffic light system based on green, amber and red trigger levels must be set in order to confirm the total ground movements and deflections presented throughout this BIA will not be exceeded, with specific actions to be taken if exceeding the amber and red trigger values.

It must be noted that the definition of the damage categories in CIRIA C760 is based on the evaluation of vertical deflections, while the monitoring is based on the measurement of vertical movements in correspondence of the edge of the excavation.

Regarding to the horizontal deflections presented in Table 10.4 and Table 10.7, they were calculated in correspondence of section of maximum vertical deflection. The vertical and horizontal movements at the excavation face to be considered for the definition of the trigger levels are presented in Table 10.8.

**Table 10.8 – Limit Ground Movements at the Edge of the Excavation**

<b>Section</b>	<b>Critical Distance (m)</b>	<b>Vertical Movement (mm)</b>	<b>Horizontal Movement (mm)</b>
CSI	19.1	9.0	15.0

However, the monitoring activities must take into account the non-linear relationship between deflection ratio and horizontal strain.

The above information must be considered as preliminary and to be revised as the proposed development design progresses.

Soils Limited must be immediately notified in the case of unexpected large movements, or movements in excess of those presented. A reassessment of ground movements and expected damage to neighbouring structures should be then carried out to take into account evidence from the construction stage.

**10.9 Recommendations and Remedial Actions**

The undertaking of a structural survey could provide useful information on the possibility of adopting different values for the acceptable movements at the time of monitoring.

It is possible to adopt measures at the time of construction useful for minimising the ground movements around and beneath the excavation. Suitable measures, in accordance to CIRIA C760 paragraph 6.3, can be summarised as:

- Good workmanship, with supports installed tight to the wall. The prop, and any packing between the prop and waling, should not rely on friction or adhesion between the prop end and waling to hold it in place
- It is good practice to minimise the first-stage excavation and install the first support as early as possible in the construction sequence
- Minimise the extent of the dig beyond the proposed support levels and the delays to the construction of the wall and its support system
- Avoid unplanned over-excavation

- Prevent the deterioration of lateral support from a clay berm by binding it or covering it with a waterproof membrane to maintain the natural moisture content
- Minimise the removal of fines during dewatering (not anticipated at this specific site)
- Minimise drawdown outside excavation.

In the case the resulting movements should remain of such magnitude to as to cause potential damage to the neighbouring structures, protective measures should be considered in agreement with CIRIA C760 paragraph 6.5, such as:

- strengthening of the ground (e.g. by means of grout injection, by pin piles or by ground freezing)
- strengthening of the building to safely sustain the additional stresses or accommodate deformations induced by ground movements
- structural jacking
- underpinning
- installation of a physical barrier between the building and the excavation to modify and reduce
- ground movements adjacent to and beneath the building
- compensation grouting.

## Section 11 Conclusions and Recommendations of BIA

### 11.1 General

The findings of this report are informed by site investigation data and information provided by the Client.

The ground conditions were found to be Made Ground (1.3m) overlying the cohesive bedrock of the London Clay Formation, which persisted beyond the base of the investigatory holes (8.00mbgl). The London Clay Formation were established to be very low permeable cohesive soils and were characterised by medium volume change potential. The inferred mechanical behaviour of the London Clay Formation was on the low side of the usual range for similar soils therefore could have been affected in the past by ground instability phenomena.

Groundwater was not encountered during the drilling of the boreholes but was observed at a minimum depth of 1.50m bgl during the monitoring visit undertaken. Local dewatering could be required during construction, either by exclusion, extraction, or a combination of the two. If extraction methods are used, best practice must be adopted to prevent the loss of material from the surrounding ground, which could cause instability.

The use of piles was recommended for the proposed basement foundations and the construction of basement walls, in order to ensure the stability of the excavation and of the slope.

The permanent works must be designed to ensure induced ground movements surrounding the site are within tolerable limits and temporary works sufficiently design to prevent damage during construction. It was recommended that pre-start and completion surveys be made of the adjoining properties. Monitoring of ground and structures to be undertaken before, during and for a sufficiently long period after the completion of the basement for the properties falling within the area of influence of the proposed development.

A ground movement assessment was undertaken as part of this assessment. The assessment regarding the most sensitive neighbouring structure (CS1, 18-28 Palace Road) provided an expected damage falling into Burland's category 1 (very slight damage) and was therefore acceptable according to the prescriptions from the LB of Camden.

The site was identified as falling in Flood Zone 1 and was characterised by very low to negligible flood risk. Albeit located within a Critical Drainage Area, it was not part of any Local Flood Risk Zone. The risk of cumulative effects on groundwater flow was negligible to very low due to the expected very low permeability of the cohesive soils encountered and to the absence of other basements in the immediate surroundings.

Overall, it was considered the proposed development would have a limited impact on neighbouring properties provided a suitable basement construction was selected. This

BIA was developed with reference to the information provided by the Client's consultant, presented in Appendix E. Soils Limited must be promptly informed in the case of different solutions be designed by the chosen contractor, as this could require the BIA to be reviewed.

## Appendix A Standards and Resources

The site works, soil descriptions and geotechnical testing was undertaken in accordance with the following standards were applicable:

- BS 5930:2015 and BS EN ISO 22476-2 2005+A1:2011
- BS EN 1997-1:2004+A1:2013 Eurocode 7. Geotechnical design
- BS EN ISO 14688-1:2018 - Geotechnical investigation and testing - Identification and description
- BS EN ISO 14688-2:2018 - Geotechnical investigation and testing - Principles for a classification
- BS 10175:2011+A2:2017 - Investigation of potentially contaminated sites
- LCRM 2021 Environment Agency
- BS 8004:2015 – Code of practice for foundations
- BS 1377:1990 Parts 1 to 8
- BRE Digest 241 “Low-rise buildings on shrinkable clay soils: Part 2
- BRE Special Digest 1, 2005, ‘Concrete in Aggressive Ground’
- Stroud, M. A. 1974, “The Standard Penetration Test – its application and interpretation”, Proc. ICE Conf. on Penetration Testing in the UK, Birmingham. Thomas Telford, London.
- N.E. Simons, B.K. Menzies, “A Short Course in Foundation Engineering”
- NHBC Standards Chapter 4.2, January 2023.
- Google Earth
- British Geological Survey Website

## Appendix C Geotechnical In-Situ and Laboratory Testing

### Appendix C.1 Classification

#### **Classification based on SPT “N” values:**

The inferred undrained strength of the cohesive soils was based on the SPT “N” blow counts, derived from the relationship suggested by Stroud (1974) and classified using Table C.1.1. (Ref: Stroud, M. A. 1974, “The Standard Penetration Test – its application and interpretation”, Proc. ICE Conf. on Penetration Testing in the UK, Birmingham. Thomas Telford, London.)

**Table C.1.1 SPT “N” Blow Count Cohesive Classification**

<b>Classification</b>	<b>Undrained Cohesive Strength <math>C_u</math> (kPa)</b>
Extremely low	<10
Very low	10 – 20
Low	20 – 40
Medium	40 – 75
High	75 – 150
Very high	150 – 300
Extremely high	> 300

**Note(s):** (Ref: BS EN ISO 14688-2:2004+A1:2013 Clause 5.3.)

The relative density of granular soils was classified based of the relationship given in Table C.1.2.

The *UK National Annex to Eurocode 7: Geotechnical design – Part 2: Ground investigation and testing, NA 3.7 SPT test, BS EN 1997-2:2007, Annex F* states “Relative density descriptions on borehole records should also be based on uncorrected SPT N values, unless significantly disturbed, using the density classification in BS 5930:2015, Table 7.

**Table C.1.2 SPT “N” Blow Count Granular Classification**

<b>Classification</b>	<b>SPT “N” blow count (blows/300mm)</b>
Very loose	0 to 4
Loose	4 to 10
Medium dense	10 to 30
Dense	30 to 50
Very dense	Greater than 50

**Note(s):** (Ref: The Standard Penetration Test (SPT): Methods and Use, CIRIA Report 143, 1995)

## Appendix C.2 Interpretation

### Table C.2.1 Interpretation of DPSH Blow Counts

DP	Strata	Equivalent SPT N60 Blow Counts	Inferred Cohesive Strength
DPI	LCF 1.15 – 6.00 Silty CLAY	4 - 13	Low to medium ( $C_u = 20 - 65\text{kPa}$ )
	LCF <sup>1</sup> 6.00 – 8.00 Silty CLAY	9 - 13	Medium ( $C_u = 45 - 65\text{kPa}$ )
DP2	LCF 1.60 – 6.00 Silty CLAY	4 - 13	Low to medium ( $C_u = 20 - 65\text{kPa}$ )
DP3	LCF <sup>1</sup> 1.00 – 6.00 Silty CLAY	4 - 13	Low to medium ( $C_u = 20 - 65\text{kPa}$ )

**Note(s):** <sup>1</sup> Ground conditions inferred past the base of windowless sampler boreholes.

### Table C.2.2 Interpretation of Atterberg Limit Tests

Stratum	Moisture Content (%)	Plasticity Index (%)	Passing 425 $\mu\text{m}$ Sieve (%)	Modified Plasticity Index (%)	Soil Classification	Volume Change Potential	
						BRE	NHBC
LCF	21 - 27	32 - 38	100	32 - 38	CH	Medium	Medium

**Note(s):** BRE Volume Change Potential refers to BRE Digest 240 (based on Atterberg results)

NHBC Volume Change Potential refers to NHBC Standards Chapter 4.2

Soils Classification based on British Soil Classification System

*The most common use of the term clay is to describe a soil that contains enough clay-sized material or clay minerals to exhibit cohesive properties. The fraction of clay-sized material required varies, but can be as low as 15%. Unless stated otherwise, this is the sense used in Digest 240. The term can be used to denote the clay minerals. These are specific, naturally occurring chemical compounds, predominately silicates. The term is often used as a particle size descriptor. Soil particles that have a nominal diameter of less than 2  $\mu\text{m}$  are normally considered to be of clay size, but they are not necessarily clay minerals. Some clay minerals are larger than 2  $\mu\text{m}$  and some particles, 'rock flour' for example, can be finer than 2  $\mu\text{m}$  but are not clay minerals.*

(The Atterberg Limit Tests were undertaken in accordance with BS 1377:Part 2:1990 Clauses 3.2, 4.3 and 5)

**Site Reference:** The Garaques, Frognal Lane, London NW3 6DN

**Project / Job Ref:** 21109

**Order No:** 21109 BRE

**Sample Receipt Date:** 17/10/2023

**Sample Scheduled Date:** 17/10/2023

**Report Issue Number:** 1

**Reporting Date:** 23/10/2023

**Authorised by:**

Dave Ashworth  
Technical Manager

Dates of laboratory activities for each tested analyte are available upon request.

Opinions and interpretations are outside the laboratory's scope of ISO 17025 accreditation. This certificate is issued in accordance with the accreditation requirements of the United Kingdom Accreditation Service. The results reported herein relate only to the material supplied to the laboratory. This certificate shall not be reproduced except in full, without the prior written approval of the laboratory.

Matrix	Analysed On	Determinand	Brief Method Description	Method No
Soil	D	Boron - Water Soluble	Determination of water soluble boron in soil by 2:1 hot water extract followed by ICP-OES	E012
Soil	AR	BTEX	Determination of BTEX by headspace GC-MS	E001
Soil	D	Cations	Determination of cations in soil by aqua-regia digestion followed by ICP-OES	E002
Soil	D	Chloride - Water Soluble (2:1)	Determination of chloride by extraction with water & analysed by ion chromatography	E009
Soil	AR	Chromium - Hexavalent	Determination of hexavalent chromium in soil by extraction in water then by acidification, addition of 1,5 diphenylcarbazide followed by colorimetry	E016
Soil	AR	Cyanide - Complex	Determination of complex cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Free	Determination of free cyanide by distillation followed by colorimetry	E015
Soil	AR	Cyanide - Total	Determination of total cyanide by distillation followed by colorimetry	E015
Soil	D	Cyclohexane Extractable Matter (CEM)	Gravimetrically determined through extraction with cyclohexane	E011
Soil	AR	Diesel Range Organics (C10 - C24)	Determination of hexane/acetone extractable hydrocarbons by GC-FID	E004
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of saturated calcium sulphate followed by electrometric measurement	E022
Soil	AR	Electrical Conductivity	Determination of electrical conductivity by addition of water followed by electrometric measurement	E023
Soil	D	Elemental Sulphur	Determination of elemental sulphur by solvent extraction followed by GC-MS	E020
Soil	AR	EPH (C10 – C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH Product ID	Determination of acetone/hexane extractable hydrocarbons by GC-FID	E004
Soil	AR	EPH TEXAS (C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C40)	Determination of acetone/hexane extractable hydrocarbons by GC-FID for C8 to C40. C6 to C8 by headspace GC-MS	E004
Soil	D	Fluoride - Water Soluble	Determination of Fluoride by extraction with water & analysed by ion chromatography	E009
Soil	D	Fraction Organic Carbon (FOC)	Determination of TOC by combustion analyser.	E027
Soil	D	Organic Matter (SOM)	Determination of TOC by combustion analyser.	E027
Soil	D	TOC (Total Organic Carbon)	Determination of TOC by combustion analyser.	E027
Soil	AR	Exchangeable Ammonium	Determination of ammonium by discrete analyser.	E029
Soil	D	FOC (Fraction Organic Carbon)	Determination of fraction of organic carbon by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	D	Loss on Ignition @ 450oC	Determination of loss on ignition in soil by gravimetrically with the sample being ignited in a muffle furnace	E019
Soil	D	Magnesium - Water Soluble	Determination of water soluble magnesium by extraction with water followed by ICP-OES	E025
Soil	D	Metals	Determination of metals by aqua-regia digestion followed by ICP-OES	E002
Soil	AR	Mineral Oil (C10 - C40)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge	E004
Soil	AR	Moisture Content	Moisture content; determined gravimetrically	E003
Soil	D	Nitrate - Water Soluble (2:1)	Determination of nitrate by extraction with water & analysed by ion chromatography	E009
Soil	D	Organic Matter	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	PAH - Speciated (EPA 16)	Determination of PAH compounds by extraction in acetone and hexane followed by GC-MS with the use of surrogate and internal standards	E005
Soil	AR	PCB - 7 Congeners	Determination of PCB by extraction with acetone and hexane followed by GC-MS	E008
Soil	D	Petroleum Ether Extract (PEE)	Gravimetrically determined through extraction with petroleum ether	E011
Soil	AR	pH	Determination of pH by addition of water followed by electrometric measurement	E007
Soil	AR	Phenols - Total (monohydric)	Determination of phenols by distillation followed by colorimetry	E021
Soil	D	Phosphate - Water Soluble (2:1)	Determination of phosphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Total	Determination of total sulphate by extraction with 10% HCl followed by ICP-OES	E013
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of sulphate by extraction with water & analysed by ion chromatography	E009
Soil	D	Sulphate (as SO4) - Water Soluble (2:1)	Determination of water soluble sulphate by extraction with water followed by ICP-OES	E014
Soil	AR	Sulphide	Determination of sulphide by distillation followed by colorimetry	E018
Soil	D	Sulphur - Total	Determination of total sulphur by extraction with aqua-regia followed by ICP-OES	E024
Soil	AR	SVOC	Determination of semi-volatile organic compounds by extraction in acetone and hexane followed by GC-MS	E006
Soil	AR	Thiocyanate (as SCN)	Determination of thiocyanate by extraction in caustic soda followed by acidification followed by addition of ferric nitrate followed by colorimetry	E017
Soil	D	Toluene Extractable Matter (TEM)	Gravimetrically determined through extraction with toluene	E011
Soil	D	Total Organic Carbon (TOC)	Determination of organic matter by oxidising with potassium dichromate followed by titration with iron (II) sulphate	E010
Soil	AR	TPH CWG (ali: C5- C6, C6-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C34, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C35. C5 to C8 by headspace GC-MS	E004
Soil	AR	TPH LQM (ali: C5-C6, C6-C8, C8-C10, C10-C12, C12-C16, C16-C35, C35-C44, aro: C5-C7, C7-C8, C8-C10, C10-C12, C12-C16, C16-C21, C21-C35, C35-C44)	Determination of hexane/acetone extractable hydrocarbons by GC-FID fractionating with SPE cartridge for C8 to C44. C5 to C8 by headspace GC-MS	E004
Soil	AR	VOCS	Determination of volatile organic compounds by headspace GC-MS	E001
Soil	AR	VPH (C6-C8 & C8-C10)	Determination of hydrocarbons C6-C8 by headspace GC-MS & C8-C10 by GC-FID	E001

<b>List of HWOL Acronyms and Operators</b>
<b>DETS Report No: 23-12864</b>
<b>Soils Ltd</b>
<b>Site Reference: The Garages, Frogna Lane, London NW3 6DN</b>
<b>Project / Job Ref: 21109</b>
<b>Order No: 21109 BRE</b>
<b>Reporting Date: 23/10/2023</b>

Acronym	Description
HS	Headspace analysis
EH	Extractable Hydrocarbons - i.e. everything extracted by the solvent
CU	Clean-up - e.g. by florisil, silica gel
1D	GC - Single coil gas chromatography
2D	GC-GC - Double coil gas chromatography
Total	Aliphatics & Aromatics
AL	Aliphatics only
AR	Aromatics only
#1	EH_2D_Total but with humics mathematically subtracted
#2	EH_2D_Total but with fatty acids mathematically subtracted
	Operator - underscore to separate acronyms (exception for +)
+	Operator to indicate cumulative eg. EH+HS_Total or EH_CU+HS_Total
	Det - Acronym

**Appendix D Software Input/Output Files**

16-Nov-2023	11:33	soils-user	Open

## Analysis Options

### General

Global Poisson's ratio: 0.35  
Maximum allowable ratio between values of E: 1.5  
Horizontal rigid boundary level: -20.00 [m OD]  
Displacements at load centroids: Yes  
GSA piled raft data : No

### Elastic

Elastic : Yes

### Consolidation

Consolidation : No

### Soil ProfilesSoil Profile 1

Layer ref.	Name	Level at top [mOD]	Number of intermediate displacement levels	Youngs Modulus : Top [kN/m <sup>2</sup> ]	Youngs Modulus : Btm. [kN/m <sup>2</sup> ]	Poissons ratio	Non-linear curve

16-Nov-2023	11:32	soils-user	Open

## Analysis Options

### General

Global Poisson's ratio: 0.50  
Maximum allowable ratio between values of E: 1.5  
Horizontal rigid boundary level: -20.00 [m OD]  
Displacements at load centroids: Yes  
GSA piled raft data : No

### Elastic

Elastic : Yes

### Consolidation

Consolidation : No

### Soil Profiles Soil Profile 1

Layer ref.	Name	Level at top [mOD]	Number of intermediate displacement levels	Youngs Modulus : Top [kN/m <sup>2</sup> ]	Youngs Modulus : Btm. [kN/m <sup>2</sup> ]	Poissons ratio	Non-linear curve
1	MG	0.0	3	5000.0	5000.0	0.50000	None
2	LCF	-1.3000	38	15900.	49560.	0.50000	None

### Soil Profiles Soil Profile 2

Layer ref.	Name	Level at top [mOD]	Number of intermediate displacement levels	Youngs Modulus : Top [kN/m <sup>2</sup> ]	Youngs Modulus : Btm. [kN/m <sup>2</sup> ]	Poissons ratio	Non-linear curve
1	LCF	-3.5000	33	19860.	49560.	0.50000	None

Units: kN,m

**INPUT DATA**

**SOIL PROFILE**

Stratum no.	Elevation of top of stratum	Soil types Left side	Soil types Right side
1	0.00	1 MG	1 MG
2	-1.30	2 LCF	2 LCF

**SOIL PROPERTIES**

No.	Description (Datum elev.)	Bulk density kN/m3	Young's Modulus Eh, kN/m2 (dEh/dy)	At rest coeff. Ko (dKo/dy)	Consol state. ( Nu ) ( NC/OC )	Active limit Ka ( Kac )	Passive limit Kp ( Kpc )	Cohesion kN/m2 ( dc/dy )
1	MG	15.00a	3000	0.658	NC (0.350)	0.444 (1.529)	2.591 (4.371)	0.0d
2	LCF (-1.30)	18.50a	11900	1.251	OC (0.330)	0.409 (1.464)	2.892 (4.683)	0.0d
		20.50b	(1400)					

Note: (a) and (b) are Bulk Densities above and below the water table

**Additional soil parameters associated with Ka and Kp**

No.	Description	--- parameters for Ka ---			--- parameters for Kp ---		
		Soil friction angle	Wall adhesion coeff.	Back-fill angle	Soil friction angle	Wall adhesion coeff.	Back-fill angle
1	MG	20.00	0.500	0.00	20.00	0.667	0.00
2	LCF	22.00	0.500	0.00	22.00	0.667	0.00

**GROUND WATER CONDITIONS**

Density of water = 10.00 kN/m3

	Left side	Right side
Initial water table elevation	-1.50	-1.50

Automatic water pressure balancing at toe of wall : Yes

Water profile no.	Point no.	Left side			Right side			
		Elev. m	Piezo elev. m	Water press. kN/m2	Point no.	Elev. m	Piezo elev. m	Water press. kN/m2
1	1	-1.50	-1.50	0.0	1	-3.50	-3.50	0.0 MC
2	1	0.00	0.00	0.0	1	-3.50	-3.50	0.0 WC

**WALL PROPERTIES**

Type of structure = Fully Embedded Wall  
 Elevation of toe of wall = -15.00  
 Maximum finite element length = 0.80 m  
 Youngs modulus of wall E = 2.1000E+07 kN/m2  
 Moment of inertia of wall I = 7.4220E-03 m4/m run  
 E.I = 155862 kN.m2/m run  
 Yield Moment of wall = Not defined

**STRUTS and ANCHORS**

Prop no.	Prop Elev.	Prop spacing m	Cross-section area sq.m	Youngs modulus kN/m2	Free length m	Inclin -ation (degs)	Pre-stress /prop kN	Strut or Anchor	Allow tension ?	L/R
1	0.00	3.00	0.002000	2.000E+08	4.00	0.00	0	Strut	No	R
2	-1.75	3.00	0.002000	2.000E+08	4.00	0.00	0	Strut	No	R
3	-3.40	3.00	0.002000	2.000E+08	4.00	0.00	0	Strut	No	R
4	-3.30	1.00	0.400000	2.100E+07	4.00	0.00	0	Strut	No	R
5	-0.10	1.00	0.200000	2.100E+07	4.00	0.00	0	Strut	No	R

**SURCHARGE LOADS**

Surch -arge no.	Distance from wall	Length parallel to wall	Width perpend. to wall	Surcharge (kN/m2) Near edge	Surcharge (kN/m2) Far edge	Equiv. soil type	Part fact/ Cat	Short Q reduct. factor
1	0.00	0.00(L)	2.00	1.00	0.00	= N/A	1.00	-
2	0.00	1.50(L)	22.00	10.00	10.00	= N/A	1.00	Var

Note: L = Left side, R = Right side

Limit State Categories P/U = Permanent Unfavourable  
P/F = Permanent Favourable  
Var = Variable (unfavourable)

**CONSTRUCTION STAGES**

Construction stage no.	Stage description
1	Apply surcharge no.1 at elevation 0.00
2	Install strut or anchor no.1 at elevation 0.00
3	Apply surcharge no.2 at elevation 0.00
4	Apply water pressure profile no.1 ( Mod. Conserv. )
5	Excavate to elevation 0.00 on RIGHT side Toe of berm at elevation -1.75 Width of top of berm = 0.10 Width of toe of berm = 1.85
6	Install strut or anchor no.2 at elevation -1.75
7	Excavate to elevation -1.75 on RIGHT side
8	Excavate to elevation -1.75 on RIGHT side Toe of berm at elevation -3.50 Width of top of berm = 0.10 Width of toe of berm = 1.85
9	Install strut or anchor no.3 at elevation -3.40
10	Excavate to elevation -3.50 on RIGHT side
11	Install strut or anchor no.4 at elevation -3.30
12	Remove strut or anchor no.3 at elevation -3.40
13	Install strut or anchor no.5 at elevation -0.10
14	Remove strut or anchor no.2 at elevation -1.75
15	Remove strut or anchor no.1 at elevation 0.00
16	Change EI of wall to 109103 kN.m2/m run Allow wall to relax with new modulus value

**LIMIT STATE PARAMETERS**

Limit State: Serviceability Limit State  
All loads and soil strengths are unfactored

**FACTORS OF SAFETY and ANALYSIS OPTIONS**

Limit State options: Serviceability Limit State  
All loads and soil strengths are unfactored

Stability analysis:  
Method of analysis - Strength Factor method  
Factor on soil strength for calculating wall depth = 1.00

Parameters for undrained strata:  
Minimum equivalent fluid density = 5.00 kN/m3  
Maximum depth of water filled tension crack = 0.00 m

Bending moment and displacement calculation:  
Method - Subgrade reaction model using Influence Coefficients  
Open Tension Crack analysis? - No  
Non-linear Modulus Parameter (L) = 0 m

Boundary conditions:  
Length of wall (normal to plane of analysis) = 22.00 m

Width of excavation/fill on Left side of wall = 1.00 m  
Width of excavation/fill on Right side of wall = 14.40 m

Distance to rigid boundary on Left side = 12.00 m  
Distance to rigid boundary on Right side = 7.20 m

**OUTPUT OPTIONS**

Stage no.	Stage description	Displacement Bending mom. Shear force	Active Passive pressures	Graph. output
1	Apply surcharge no.1 at elev. 0.00	Yes	Yes	Yes
2	Install prop no.1 at elev. 0.00	Yes	Yes	Yes
3	Apply surcharge no.2 at elev. 0.00	Yes	Yes	Yes
4	Apply water pressure profile no.1	Yes	Yes	Yes
5	Excav. to elev. 0.00 on RIGHT side	Yes	Yes	Yes
6	Install prop no.2 at elev. -1.75	Yes	Yes	Yes
7	Excav. to elev. -1.75 on RIGHT side	Yes	Yes	Yes
8	Excav. to elev. -1.75 on RIGHT side	Yes	Yes	Yes
9	Install prop no.3 at elev. -3.40	Yes	Yes	Yes
10	Excav. to elev. -3.50 on RIGHT side	Yes	Yes	Yes
11	Install prop no.4 at elev. -3.30	Yes	Yes	Yes
12	Remove prop no.3 at elev. -3.40	Yes	Yes	Yes
13	Install prop no.5 at elev. -0.10	Yes	Yes	Yes
14	Remove prop no.2 at elev. -1.75	Yes	Yes	Yes
15	Remove prop no.1 at elev. 0.00	Yes	Yes	Yes
16	Change EI of wall to 109103kN.m2/m run	Yes	Yes	Yes
*	Summary output	Yes	-	Yes

Stage No. 1 Apply surcharge no.1 at elevation 0.00

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

<u>Stage No.</u>	<u>Ground level Act.</u>	<u>Pass.</u>	<u>Prop Elev.</u>	<u>FoS for toe elev. = -15.00</u>		<u>Toe elev. for FoS = 1.000</u>		<u>Direction of failure</u>
				<u>Factor of Safety at elev.</u>	<u>Moment of equilib. at elev.</u>	<u>Toe elev.</u>	<u>Wall Penetration</u>	
1	0.00	0.00	Cant.	<u>Conditions not suitable for FoS calc.</u>				

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**

**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m  
 Rigid boundaries: Left side 12.00m from wall  
 Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

Units: kN,m

Stage No. 7 Excavate to elevation -1.75 on RIGHT side

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

<u>Stage No.</u>	<u>Ground level Act.</u>	<u>Ground level Pass.</u>	<u>Prop Elev.</u>	<u>FoS for toe elev. = -15.00</u>	<u>Moment of equilib. at elev.</u>	<u>Toe elev. for FoS = 1.000</u>	<u>Wall Penetration</u>	<u>Direction of failure</u>
7	0.00	-1.75						More than one prop. No FoS calc.

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**

**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m  
 Rigid boundaries: Left side 12.00m from wall  
 Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

\*\*\* Convergence failure - Out of balance shear force at elevation -15.00 is 2.001% of the maximum shear force. see Note.

Units: kN,m

Stage No. 8 Excavate to elevation -1.75 on RIGHT side  
 Toe of berm at elevation -3.50  
 Width of top of berm = 0.10  
 Width of toe of berm = 1.85

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

Stage No.	Ground level		Prop Elev.	FoS for toe elev. = -15.00		Toe elev. for FoS = 1.000		Direction of failure
	Act.	Pass.		Factor of Safety	Moment at elev.	Toe elev.	Wall Penetration	
8	0.00	-1.75		More than one prop. No FoS calc.				

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**  
**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m  
 Rigid boundaries: Left side 12.00m from wall  
 Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

Units: kN,m

Stage No. 12 Remove strut or anchor no.3 at elevation -3.40

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

<u>Stage No.</u>	<u>Ground level Act.</u>	<u>Prop Pass.</u>	<u>Prop Elev.</u>	<u>FoS for toe elev. = -15.00</u>	<u>Moment of equilib. at elev.</u>	<u>Toe elev. for FoS = 1.000</u>	<u>Wall Penetr -ation</u>	<u>Direction of failure</u>
12	0.00	-3.50						More than one prop. No FoS calc.

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**

**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m

Rigid boundaries: Left side 12.00m from wall

Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

<u>Node no.</u>	<u>Y coord</u>	<u>Nett pressure</u>	<u>Wall disp.</u>	<u>Wall rotation</u>	<u>Shear force</u>	<u>Bending moment</u>	<u>Prop forces</u>	<u>EI of wall</u>

Units: kN,m

Stage No. 14 Remove strut or anchor no.2 at elevation -1.75

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

<u>Stage No.</u>	<u>Ground level Act.</u>	<u>Prop Pass.</u>	<u>Prop Elev.</u>	<u>Factor of Safety</u>	<u>Moment of equilib. at elev.</u>	<u>Toe elev.</u>	<u>Wall Penetr -ation</u>	<u>Direction of failure</u>
14	0.00	-3.50						

**FoS for toe elev. = -15.00**      **Toe elev. for FoS = 1.000**  
More than one prop. No FoS calc.

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**  
**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m  
 Rigid boundaries: Left side 12.00m from wall  
 Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

<u>Node no.</u>	<u>Y coord</u>	<u>Nett pressure</u>	<u>Wall disp.</u>	<u>Wall rotation</u>	<u>Shear force</u>	<u>Bending moment</u>	<u>Prop forces</u>	<u>EI of wall</u>

Units: kN,m

Stage No. 16 Change EI of wall to 109103 kN.m2/m run  
 Allow wall to relax with new modulus value

**STABILITY ANALYSIS of Fully Embedded Wall according to Strength Factor method**  
 Factor of safety on soil strength

<u>Stage No.</u>	<u>Ground level</u>		<u>Prop Elev.</u>	<u>FoS for toe elev. = -15.00</u>		<u>Toe elev. for FoS = 1.000</u>		<u>Direction of failure</u>
	<u>Act.</u>	<u>Pass.</u>		<u>Factor of Safety</u>	<u>Moment at elev.</u>	<u>Toe elev.</u>	<u>Wall Penetration</u>	
16	0.00	-3.50		<u>More than one prop. No FoS calc.</u>				

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**

**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m

Rigid boundaries: Left side 12.00m from wall

Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces are to be multiplied by a factor of 1.35 to obtain values for structural design. See summary for factored values.

Units: kN,m

**Summary of results**

**BENDING MOMENT and DISPLACEMENT ANALYSIS of Fully Embedded Wall**

**Analysis options**

Subgrade reaction model - Boussinesq Influence coefficients  
 Soil deformations are elastic until the active or passive limit is reached  
 Open Tension Crack analysis - No

Length of wall perpendicular to section = 22.00m  
 Rigid boundaries: Left side 12.00m from wall  
 Right side 7.20m from wall

**Limit State: Serviceability Limit State**

Calculated Bending Moments and Prop Forces have been multiplied by a factor of 1.35 to obtain values for structural design.

**Bending moment, shear force and displacement envelopes**

\*\*\* Convergence errors have occurred in at least one Construction Stage. The errors are cumulative, and the results of all stages must be inspected for significant out of balance moment or shear at the toe of the wall.

Failure of the iterative procedure to converge to an equilibrium solution may be due to a very high ratio of soil stiffness to wall stiffness. The data should be reviewed to see if realistic values have been specified

<u>Out of balance shear forces.</u>	
<u>Percentage Error</u>	<u>Interpretation</u>
< 2%	Generally acceptable
2% to 4%	Use with caution
> 4%	Should not be used

**DISCLAIMER:**  
TODD Architects confirm that recipients can only rely on approved controlled document formats in construction projects. Controlled document formats include original hard copy drawings issued by TODD Architects, or unprinted PDF/DWF images of drawings received from TODD Architects.  
TODD Architects cannot ensure the accuracy of drawings, used in an uncontrolled document format which may be altered or misinterpreted as a result of human error on the part of the recipient, or as a result of the incompatibility of computer systems when opening or printing computer aided drawings. Uncontrolled document formats include: computer aided design files, prints which have been created by the recipient from non-controlled file formats, photocopies of original hard copy drawings from TODD Architects, draft drawings supplied by TODD Architects for information purposes only.  
TODD Architects accept no responsibility for any loss or damage arising as a result of reliance by the recipient or any third party on uncontrolled document formats, reliance upon which will be entirely at the risk of the recipient. Contractors are responsible for the verification of all dimensions on site and the architect is to be informed of any discrepancy.  
Do not scale from this drawing.  
Use figured dimensions only.
