

PRODUCT CODE: 319561

ACO HexDrain Brickslot Channel with black plastic slotted grating 1m

Product Specification

Product Code	319561
EAN	4002626662279
Material	80% Polypropylene / 20% Viscose
Length	1000mm
Width	125mm

Product Description

Discreet slot drainage suitable for using with brickwork, paving slabs, garage thresholds, patios and paths.

The ACO HexDrain Brickslot is a discreet and unobtrusive slot drainage system for domestic and light traffic installation, ideal for use in block paving or at thresholds.

The HexDrain Brickslot is a combination of the highly successful HexDrain with an offset slot cover, specifically designed to allow drainage points to be under block or slab paving up to 60mm deep, and adjacent to walls and door thresholds.

The channels, manufactured from recycled polypropylene, are robust yet lightweight and are easy to manoeuver and install. The hexagonal column design increases strength for load bearing. Each channel clips together to provide easy installation and features installation guides, along with eight variable vertical outlets to connect the system to HexDrain Sump Units or PVC-U pipe via a HexDrain Outlet Connector. The discreet 10mm inlet slot it tapered to prevent blockage, with debris guards to stop the ingress of sand and cement between units.

- High quality polypropylene channel, suitable for pedestrian and vehicle traffic up to 1.5 tonnes
- Compatible with up to and including 60mm deep block paving
- Channels clip together for quick and easy installation

As standard HexDrain Brickslot comes in 1 metre lengths, however each channel has a cutting guide to easily creating shorter, half metre lengths.

System CE marked and fully certified to Load Class A15 BS EN 1433:2002.

Please note: It is advisable to place a Brickslot Corner Unit every 3-5 metre length as a rodding access point
