

PLAN OF THE PRYORS, EAST HEATH ROAD, LONDON NW3 1BS - 20560 - JULY 2024

T3 - Holly x 1 - fell to ground level and grind out stump of same and replace with Dawyck beech (feathered( 10.12 cms girth)

Reasons: Holly leaf miner noted, low vitality, little or no incremennt in growth. The row of trees in toto along the street frontage is now well estalished, this tree is becoming a net detractor, visually from the group. It is at least 30% down in term of crown density compared with a normal tree of this type.

T10 - Common ash x 1 - reduce to approximately 16m l height and 7m in spread removing minor deadwood

Reasons: It has been observed that common ash trees that have been pruned are moreresistant to ash decline (Hymenoscyphus fraxineus). I recommend that the tree is reduced overall in height and spread toabout 16m in height and 7m in spread. I suggest this would be a useful measure incorporating the removal of extensive but minor dead wood.

Plan not drawn to scale @ A4
