**Subject: Tree preservation ref: 2024/4405/T**

**To the council concerned with Trees**

**I wish to object strongly to the planning application above to 'fell to the ground' two mature healthy trees in the area behind number 102-4 Albert Street NW1 7NE.**

**This is a conservation area and we should be saving all the mature trees we possibly can. The garden area between the West side of Arlington Road and the East side of Albert Street north is a large enclosed area of abundant green growth. There is amongst this a small number of large mature trees giving the space a wonderful feeling of unbounded nature. We have a large number of animal species that live here. The loss of two mature trees, an Ash tree and a Sycamore will completely change the balance of the space.**

**I would like you to consider also the effect of climate change. The carbon sequestration of these trees, the time it has taken them to reach the size and maturity that qualifies them to be category A carbon credit species. (see Bacham's 'TopTrunks' carbon sequestration guide)**

**Recently Camden has suffered the loss of many trees due to the HS2 project and we should be extolling them not exterminating them wherever we can.**

**Please save these trees by issuing them with preservation orders.**

**Angela Andersen**
