1.0 INTRODUCTION

We, ads consultancy, were requested by SF ARCHITECT to compile a structural report consisting of a Construction Methodology / Method Statement to accompany a Basement Impact Assessment (BIA) for the proposed basement at 253 Goldhurst Terrace to supplement the planning application for the proposed development at the aforementioned site. A Basement Impact Assessment has been carried out and compiled by "ground&water" (report reference GWPR6303/BIA&GIR/December 2024) and which includes the Desk Study, Screening and Scoping etc. This report is to compliment that BIA with a Construction Methodology and an initial Structural Scheme. We are Chartered Engineers (Engineering Council UK) and Members of both the Institution of Structural Engineers and the Institution of Engineering and Technology. We have considerable experience in the design and construction of new build and retro-fitted basements in London and have worked on several prestigious basement developments with the UK's top basement Contractors as both Design and Build Engineers and Project Engineers for the Client.

1.1 SITE DESCRIPTION - EXISTING ARRANGEMENT

The site is situated on 253 Goldhurst Terrace, and comprises a four storey semi-detached residential property, which includes a basement, ground, first, second and third floors. The northern boundary is formed by Goldhurst Terrace, the southern boundary is formed by gardens. To the east is No.251 with which there is a shared Party Wall, and to the West is No. 255 which is detached. The site is circa 500m East of South Hampstead Overground Station and circa 800m West of Kilburn High Road Overground Station.

1.2 SCHEME PROPOSAL

The scheme consists of the extension of the existing basement to the rear, side (i.e. to suit the existing ground floor flank masonry wall towards No. 255) and partly towards the front of the property, i.e. up to and under the existing ground floor wall between the kitchen and bedroom 1. The level of the extended basement will remain the same as the existing basement's level. An opening within the existing ground floor kitchen will also be created to accommodate a new staircase between the basement and ground floors. The proposed scheme also includes rebuilding the existing conservatory to the rear of the ground floor in cavity wall construction, as well as creating an opening through the ground floor wall between the rear reception and the corridor. The latter will require some new steel structure (i.e. a box frame around or steel beam over the new opening).

The new basement extension will be formed of new reinforced concrete retaining walls, constructed in underpinning sequence. The underpins will be constructed in circa 1.0m sections and in a typical staggered underpinning sequence similar to that of typical underpinning. This would negate the need for major temporary works to the existing building. None of the existing Party Walls (i.e. with No. 251) will be underpinned as the proposed extension is inside the boundaries with any of the adjacent properties. A new reinforced concrete ground bearing slab will form the floor of the new basement areas and a mix of timber joists and flat slabs will form the new ground floor to the footprint of the new basement.

Please refer to the attached drawings and sketches in the Drawing Appendix at the rear of this report.

1.4 WORKS PROGRAMME

- The total anticipated construction length will be circa 9-12 months.
- The total duration of the basement works will be circa 5-6 months.

2.0 SITE INVESTIGATION

A detailed site investigation had been carried out on site on 7th November 2024 by "ground & water" who are specialist geotechnical engineers, to determine the structural characteristics of the soil along with hydrogeology characteristics. A Basement Impact Assessment report has been prepared by ground&water (report no. GWPR6303/BIA&GIR dated December 2024) which includes their findings which we summarise below.

From consultation with the British Geological Survey (BGS) maps and the recent site investigation report prepared by "ground & water", it appears that the site is located over the London clay formation, with no superficial deposits or made ground found within 250m of the site.

2.1 DESK STUDY / SCREENING / SCOPING

These have been included in the BIA report prepared by ground&water (report no. GWPR6303/BIA&GIR dated December 2024) - this report compliments the aforementioned BIA with a Construction Methodology / Method Statement and an Initial Structural Scheme.

3D Views of the building as Proposed

2.2 FLOOD RISK

The flood risk of the site has been assessed in the Basement Impact Assessment prepared by "ground&water" (report no. GWPR6303/BIA&GIR dated December 2024) and summarised below - for more details please refer to the aforementioned BIA report.

2.2.1 From rivers and sea

The site lies within Flood Zone 1

2.2.2 From reservoirs

The site is not considered to be at risk of flooring from reservoirs, even when rivers are flooded.

2.2.3 From Surface Water

The site is at very low risk of flooding from surface water.

2.2.4 From Groundwater

The site is not in an area with increased susceptibility of elevated ground water. Some properties around and withing 250m from the site have historical issues with flooding from groundwater though.

2.2.5 From Sewers

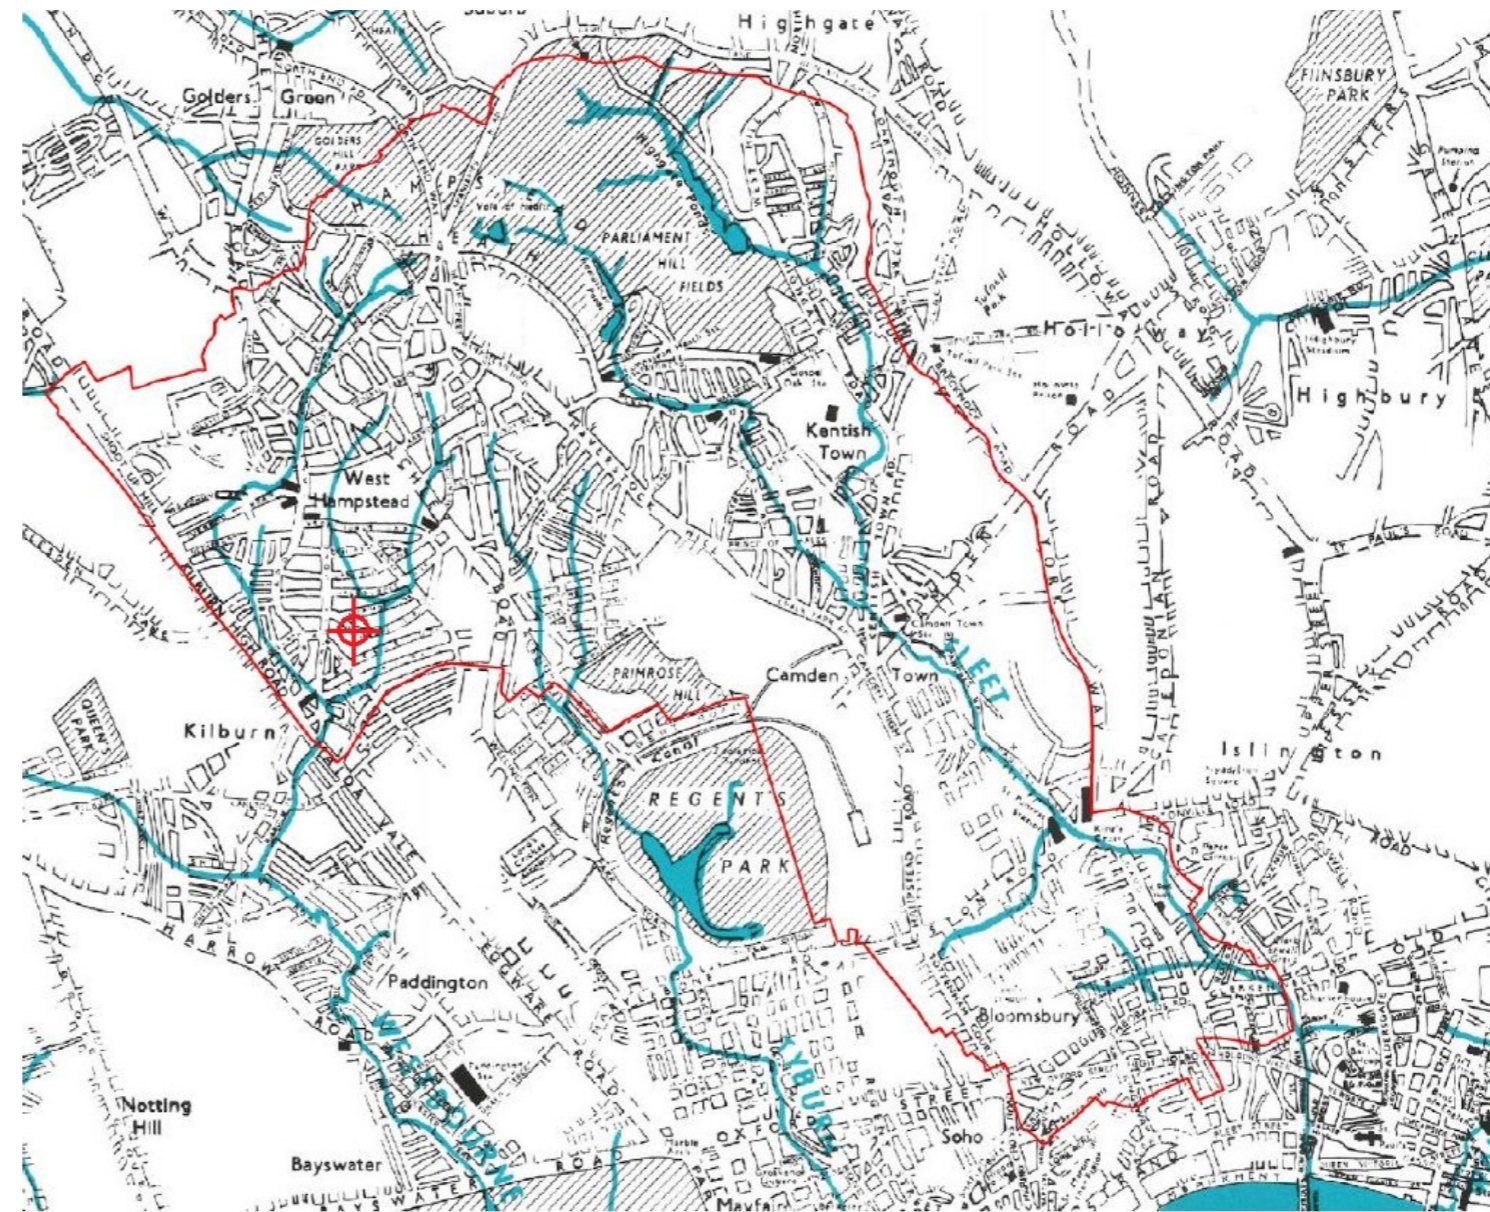

Some records of internal and external sewer flooding have been recorder within the site's postcode area.

2.2.6 Old Rivers

The site does not lie on any old / lost rivers. Streams which join the Westbourne are to the West and East of the site.

2.2.7 Critical Drainage Areas/Local Flood risk Areas

Please refer to Basement Impact Assessment report no. GWPR6303/BIA&GIR dated December 2024, prepared by ground&water for more details on local flood incidents etc.

3.0 Construction Methodology

1) Once the site has been made safe, underpinning of the relevant existing perimeter masonry walls from inside of the building will commence. There are three walls that will be underpinned and these are indicated in the graphic on page 7 and in the scheme plans starting from page 9. The proposed RC retaining walls underpinning the existing masonry (i.e. RW1 & RW2) have been designed to provide lateral stability for the retained soil, and hence no additional temporary works will be required for these.

2) Commence construction of the rest of the proposed 300-350mm thick reinforced concrete retaining walls at the same time as point 1 above. This will be done in typical underpinning sequence which is indicated in sketch 24078_SK01 & SK03. Final sequencing of underpinning is to be agreed with the Contractor and Structural Engineer prior to works commencing.

All the wall types forming the proposed basement extension (i.e. RW1, RW2, RW3, RW4) have been designed to provide lateral stability and therefore no additional temporary props will be required during the construction of said retaining walls.

3) After all the new retaining walls have been constructed in underpinning sequence, the soil remaining between the existing basement wall and the newly constructed retaining walls can be removed/excavated down to formation level. The existing basement walls of the existing utility room (which is circa 560mm higher in level than the rest of the basement) can be carefully demolished and the level lowered down to formation level.

5) Construct the new 200mm thick basement floor ground bearing RC slab and subsequently the new ground floor (either a 200mm thick RC slab or a timber joist floor) to the footprint of the new basement extension.

6) Proceed with minor internal alterations to achieve the Architect's requirements and introduce lintels / steel beams as required. At the same time construct retaining wall RW5 along the boundary with No. 255, to allow for raising the external level behind RW3 per the Architect's requirements - RW3 has been designed for the two stages, i.e. initially as unpropped to retain the lower/existing soil level, and subsequently as propped at the base to support the proposed/higher external level.

7) In the event that minor ingress of ground water occurs during the execution of the works this will be dealt with by the use of temporary sump pumps. In the permanent condition waterproofing to the new basement will be based on the Architects proposed details.

5.1 INTRODUCTION

The adjoining properties to 253 Goldhurst Terrace, NW6 3EP, will be monitored during the underpinning, excavation and throughout the construction period of the proposed basement.

5.2 TARGET POINTS

Target points will be fixed on the elevations of the adjoining properties, as per the marked-up drawings included. These include the front and rear elevation walls of Nos.251 & 255 Goldhurst Terrace. These will need to be agreed and finalised as part of the Party Wall process, prior to commencing any works.

5.3 RESULTS

The results/reading shall be recorded in both tabular and graph forms, and an electronic copy must be circulated within twenty-four hours of the readings (refer to 3.2 below). The results should be clear, and indicate the trigger values as well, for reference and comparison to the readings.

The readings / results shall be circulated to the design team, the Building Owner's Party Wall Surveyor and the Adjoining Owner's Party Wall Surveyor and Advising Engineer.

5.4 READINGS

Readings shall be taken as follows:

Activity	Frequency of readings
During underpinning works	Daily
During excavation	Twice Weekly
During construction of the basement and ground floor RC slabs	Twice Weekly
During the rest of the works	Weekly

The above shall be reviewed in case the program of the works is altered due to unforeseen circumstances.

5.5 TRIGGER VALUES

Should a trigger value be reached, the contractor should immediately stop all work that might cause further movement, assesses the situation, and proposes alternative methods of proceeding. The trigger values/limits further to this point can be reviewed and agreed between all parties.

Proposed trigger values for both vertical and horizontal movement of masonry walls of adjoining buildings are to be agreed with the Adjoining Owner's party wall surveyor – a suggestion follows:

AMBER	+/- 5mm	All parties notified
RED	+/- 8mm	Works stop and reviewed

Proposed trigger values for both vertical and horizontal movement of garden walls of adjoining buildings are to be agreed with the Adjoining Owner's party wall surveyor - a suggestion follows:

AMBER	+/- 7mm	All parties notified
RED	+/- 10mm	Works stop and reviewed

5.6 ACTIONS

Should any movement exceed the Amber or Red trigger Values, the Contractor shall act as follows:

AMBER	<ul style="list-style-type: none"> Project Engineer is notified immediately Any work that might cause further movement is stopped Readings' frequency increases Contractor proposes alternative methods of proceeding The project Engineer, Adjoining Owner's Engineer and PW Surveyor meet on site to review the works and decide if any further actions are required If it is established that any movement is directly related to the underpinning works, the contractor stops all works and all parties review the works Trigger values from this point on are reviewed further and agreed between all parties
RED	<ul style="list-style-type: none"> All works stop Project Engineer is notified immediately / All parties review the works

Vertical forces on wall

Wall stem	$W_{wall} = h_{stem} \times t_{wall} \times \gamma_{wall} = 20.7 \text{ kN/m}$
Wall base	$W_{base} = l_{base} \times t_{base} \times \gamma_{base} = 24.2 \text{ kN/m}$
Surcharge	$W_{sur} = \text{Surcharge} \times l_{heel} = 0.7 \text{ kN/m}$
Moist backfill to top of wall	$W_{m_w} = l_{heel} \times (h_{stem} - h_{sat}) \times \gamma_m = 12.6 \text{ kN/m}$
Saturated backfill	$W_s = l_{heel} \times h_{sat} \times \gamma_s = 22.1 \text{ kN/m}$
Applied vertical load	$W_v = W_{dead} + W_{live} = 96.4 \text{ kN/m}$
Total vertical load	$W_{total} = W_{wall} + W_{base} + W_{sur} + W_{m_w} + W_s + W_v = 176.6 \text{ kN/m}$

Horizontal forces on wall

Surcharge	$F_{sur} = K_a \times \cos(90 - \alpha + \delta) \times \text{Surcharge} \times h_{eff} = 0.9 \text{ kN/m}$
Moist backfill above water table	$F_{m_a} = 0.5 \times K_a \times \cos(90 - \alpha + \delta) \times \gamma_m \times (h_{eff} - h_{water})^2 = 2.6 \text{ kN/m}$
Moist backfill below water table	$F_{m_b} = K_a \times \cos(90 - \alpha + \delta) \times \gamma_m \times (h_{eff} - h_{water}) \times h_{water} = 10.4 \text{ kN/m}$
Saturated backfill	$F_s = 0.5 \times K_a \times \cos(90 - \alpha + \delta) \times (\gamma_s - \gamma_{water}) \times h_{water}^2 = 6.5 \text{ kN/m}$
Water	$F_{water} = 0.5 \times h_{water}^2 \times \gamma_{water} = 19.6 \text{ kN/m}$
Total horizontal load	$F_{total} = F_{sur} + F_{m_a} + F_{m_b} + F_s + F_{water} = 40 \text{ kN/m}$

Calculate stability against sliding

Passive resistance of soil in front of wall	$F_p = 0.5 \times K_p \times \cos(\delta_b) \times (d_{cover} + t_{base} + d_{ds} - d_{exc})^2 \times \gamma_{mb} = 3.2 \text{ kN/m}$
Resistance to sliding	$F_{res} = F_p + (W_{total} - W_{sur} - W_{live}) \times \tan(\delta_b) = 55.2 \text{ kN/m}$

PASS - Resistance force is greater than sliding force

Overturning moments

Surcharge	$M_{sur} = F_{sur} \times (h_{eff} - 2 \times d_{ds}) / 2 = 1.3 \text{ kNm/m}$
Moist backfill above water table	$M_{m_a} = F_{m_a} \times (h_{eff} + 2 \times h_{water} - 3 \times d_{ds}) / 3 = 6.1 \text{ kNm/m}$
Moist backfill below water table	$M_{m_b} = F_{m_b} \times (h_{water} - 2 \times d_{ds}) / 2 = 10.4 \text{ kNm/m}$
Saturated backfill	$M_s = F_s \times (h_{water} - 3 \times d_{ds}) / 3 = 4.3 \text{ kNm/m}$
Water	$M_{water} = F_{water} \times (h_{water} - 3 \times d_{ds}) / 3 = 13.1 \text{ kNm/m}$
Total overturning moment	$M_{ot} = M_{sur} + M_{m_a} + M_{m_b} + M_s + M_{water} = 35.3 \text{ kNm/m}$

Restoring moments

Wall stem	$M_{wall} = W_{wall} \times (l_{toe} + t_{wall} / 2) = 24.3 \text{ kNm/m}$
Wall base	$M_{base} = W_{base} \times l_{base} / 2 = 24.8 \text{ kNm/m}$
Moist backfill	$M_{m_r} = (W_{m_w} \times (l_{base} - l_{heel} / 2) + W_{m_s} \times (l_{base} - l_{heel} / 3)) = 21.4 \text{ kNm/m}$
Saturated backfill	$M_{s_r} = W_s \times (l_{base} - l_{heel} / 2) = 37.5 \text{ kNm/m}$
Design vertical dead load	$M_{dead} = W_{dead} \times l_{load} = 88.1 \text{ kNm/m}$
Total restoring moment	$M_{rest} = M_{wall} + M_{base} + M_{m_r} + M_{s_r} + M_{dead} = 196.1 \text{ kNm/m}$

Check stability against overturning

Total overturning moment	$M_{ot} = 35.3 \text{ kNm/m}$
Total restoring moment	$M_{rest} = 196.1 \text{ kNm/m}$

PASS - Restoring moment is greater than overturning moment

Check bearing pressure

Surcharge	$M_{sur_r} = W_{sur} \times (l_{base} - l_{heel} / 2) = 1.2 \text{ kNm/m}$
Design vertical live load	$M_{live} = W_{live} \times l_{load} = 25.1 \text{ kNm/m}$
Total moment for bearing	$M_{total} = M_{rest} - M_{ot} + M_{sur_r} + M_{live} = 187.2 \text{ kNm/m}$
Total vertical reaction	$R = W_{total} = 176.6 \text{ kN/m}$
Distance to reaction	$x_{bar} = M_{total} / R = 1060 \text{ mm}$
Eccentricity of reaction	$e = \text{abs}((l_{base} / 2) - x_{bar}) = 35 \text{ mm}$

Saturated backfill	$M_{s_r} = W_s \times (l_{base} - l_{heel} / 2) = 11.2 \text{ kNm/m}$
Total restoring moment	$M_{rest} = M_{wall} + M_{base} + M_{m_r} + M_{s_r} = 59.1 \text{ kNm/m}$

Check stability against overturning

Total overturning moment	$M_{ot} = 14.1 \text{ kNm/m}$
Total restoring moment	$M_{rest} = 59.1 \text{ kNm/m}$

PASS - Restoring moment is greater than overturning moment

Check bearing pressure

Surcharge	$M_{sur_r} = W_{sur} \times (l_{base} - l_{heel} / 2) = 10.7 \text{ kNm/m}$
Total moment for bearing	$M_{total} = M_{rest} - M_{ot} + M_{sur_r} = 55.7 \text{ kNm/m}$
Total vertical reaction	$R = W_{total} = 60.7 \text{ kN/m}$
Distance to reaction	$x_{bar} = M_{total} / R = 918 \text{ mm}$
Eccentricity of reaction	$e = \text{abs}((l_{base} / 2) - x_{bar}) = 18 \text{ mm}$

Reaction acts within middle third of base

Bearing pressure at toe	$p_{toe} = (R / l_{base}) - (6 \times R \times e / l_{base}^2) = 31.7 \text{ kN/m}^2$
Bearing pressure at heel	$p_{heel} = (R / l_{base}) + (6 \times R \times e / l_{base}^2) = 35.8 \text{ kN/m}^2$
