

## Design and Access Statement

This proposal is for the 3 bedrooms that are onto the street - all of which have sash windows. It proposes installing secondary glazing units, a sympathetic internal glass panel openable with a sash sliding system which mirrors the original windows. It will be barely noticeable, due to the identical framing and colour of the original windows, and allows the original 1820's windows to remain in place while providing a decent nights sleep in what is a very loud part of London. Not to mention energy saving costs of more insulated rooms.
