

levels are unlikely to be adversely affected because light will continue to be received either over and elevation), then the more detailed BRE tests are required. If the centre of the neighbour's window lies on the extension side of both of the 45° lines (on plan the roof, or beyond the end of the extension. Otherwise, daylight and sunlight

45 degree test

The 45° test is used to check extensions that are perpendicular to a window - as in the example below.

Drawings and calculations are to be approved by Building Control prior to the commencement of any work. No responsibility will be taken by the design team without the written approval by the Local Authority or an approved inspector.
