

This Technical Note (TN) has been produced by Hilson Moran in relation to the proposed development at **151 Shaftesbury Avenue, London WC2H 8AL**, located in the London Borough of Camden (LBC).

The aim of this TN is to respond to comments made by the LBC, specifically from their Transport Strategy Service Team.

### **3. Trip Generation**

*3.2 The TRICS database was used to derive the anticipated total person trip rates generated by 310sqm uplift of office space. Since the development proposes a 651 sqm and 112 sqm uplift of office, flexible retail and retail space respectively, the trip generation analysis needs to be resubmitted to reflect the actually uplift. The full TRICS output should also be provided. The applicant is requested to clarify why the existing site was not surveyed, and the results applied to the proposed uplift in floor space, which would likely provide a more robust trip profile data."*

It is noted that the 310sqm uplift of office space refers to the difference between the existing office floor area, which comprises 6,563sqm GIA with the proposed refurbished office space comprising 6,873sqm. As outlined in the Transport Statement, the additional 310sqm uplift refers to the area that is used for typical office use i.e. desks/workstations, whereas the additional 341sqm relates to the broader office environment. Therefore, the trip generation exercise was solely undertaken for the 310sqm uplift.

In terms of the 112sqm retail space uplift, a trip generation exercise was not undertaken for this, as it is likely that it will not be an independent trip generator but will be used by existing site users, therefore will be pass-by trips. Furthermore, it is likely that a relatively small uplift would result in an improved retail offer rather than generate further trips.

Nevertheless, further to LBC's comments above, a revised trip generation has been undertaken for the 651sqm of additional office floor area in order to provide a more robust assessment.

In order to undertake the revised assessment, the following selections were made within the TRICS database to ensure that the sites reviewed provide an accurate representation of the proposed office use:

- Sites located within Greater London;
- Main Land Use 02 – Employment; A – Office;
- Surveys undertaken during a weekday;
- Multi-Modal Trips;
- Car Free sites.

The revised TRICS output is attached to this note as **Appendix 1**, which resulted in a total of three relevant sites.

For context, the total person trip rates are outlined in the table below.

Trip Rates per 100sqm			
Time	Arrive	Depart	Two-Way
<b>0700-0800</b>	0.668	0.049	0.717
<b>0800-0900</b>	1.508	0.181	1.689
<b>0900-1000</b>	1.153	0.239	1.392
<b>1600-1700</b>	0.305	1.136	1.441
<b>1700-1800</b>	0.149	1.648	1.797
<b>1800-1900</b>	0.049	0.898	0.947
<b>Daily Trip</b>	<b>8.649</b>	<b>8.482</b>	<b>17.131</b>

The above trip rates have subsequently been applied to the 651sqm to provide the trips as outlined in the table below.

Trips (651sqm office)			
Time	Arrive	Depart	Two-Way
<b>0700-0800</b>	4	0	5
<b>0800-0900</b>	10	1	11
<b>0900-1000</b>	8	2	9
<b>1600-1700</b>	2	7	9
<b>1700-1800</b>	1	11	12
<b>1800-1900</b>	0	6	6
<b>Daily Trip</b>	<b>56</b>	<b>55</b>	<b>112</b>

In order to inform the modal split, the same Journey to Work Mode Share data for the Camden 028 Middle Super Output Area (MSOA) has been used as in the Transport Statement. As the development is car-free, all car-based modes have been reallocated.

The table below outlines the breakdown of the total person trips by mode.

<b>Method of Travel to Work</b>	<b>07:00-08:00</b>	<b>08:00-09:00</b>	<b>09:00-10:00</b>	<b>16:00-17:00</b>	<b>17:00-18:00</b>	<b>18:00-19:00</b>	<b>Daily</b>
	07:00-08:00	08:00-09:00	09:00-10:00	16:00-17:00	17:00-18:00	18:00-19:00	
Underground	2	4	4	4	5	2	44
Train	2	4	3	3	4	2	40
Bus, minibus or coach	1	1	1	1	1	1	14
Taxi	0	0	0	0	0	0	0
Motorcycle, scooter or moped	0	0	0	0	0	0	0
Driving a car or van	0	0	0	0	0	0	0
Passenger in a car or van	0	0	0	0	0	0	0
Bicycle	0	1	1	1	1	0	6
On foot	0	1	0	0	1	0	6
Other method of travel to work	0	0	0	0	0	0	0
<b>TOTAL</b>	<b>5</b>	<b>11</b>	<b>9</b>	<b>9</b>	<b>12</b>	<b>6</b>	<b>111</b>

A review of the above trips outlines that the additional office space will generate a total of 11 additional trips during the AM peak hour (0800-0900) and 12 additional trips during the PM peak hour (1700-1800). As noted in the above table, the additional trips will primarily be undertaken by Underground and Train.

In conclusion, the breakdown outlined in the table above demonstrates that the trips will be dispersed across sustainable and public transport modes. Therefore, a re-run of the trip generation in conjunction with the site's high PTAL and several excellent sustainable transport options in the vicinity suggests that this level of increase will not have a detrimental impact on the existing transport provision. This will result in a negligible impact to local transport infrastructure.

## ***6. Cycle Parking***

*6.1 Secure cycle parking will be provided within the lower ground level, accessed via a dedicated entrance and cycle lift. 137 spaces will be provided, comprising two tiers of cycle parking, with a capacity of up to 100 bikes, 21 lockers for folding bikes, 6 Sheffield stands with a capacity for up to 12 bikes, 2 e-bike charging stations, 2 accessible parking spaces and a bike repair station. The quantum of cycle parking is in accordance with the London Plan and CPG Transport guidance. The applicant is requested to confirm that the lift will be of a sufficient size to accommodate all types of bikes in a horizontal position, and clarify where visitor cycle parking will be provided.*

Cycle parking will benefit from a dedicated entrance and will be provided with a lift to the cycle area within the lower ground level which will provide secure cycle parking and changing facilities.

The Cycle Lift CL01 is proposed to be a 1 x1275 kg / 17 person @ 1.0 m/s lift. The minimum advised car size is 1200mm wide x 2300mm deep with a door opening of 900mm, to meet the minimum requirements of the London Cycling Design Standards (3.2.3 Cycle design parameters).

In accordance with London Plan guidance (2021) and BREEAM guidance, 137 cycle spaces will be provided within the development, based upon 103 cycle spaces allocated to the Office space, 19 cycle spaces for Retail 1, 6 cycle spaces for Retail 2 and 9 cycle spaces for the Club Lounge.

The current scheme does not take into account the permitted use of the site or any existing demand for cycle parking that may arise from this use within the local area. Currently, there are provisions for securing 14 cycles on the footway fronting the site, with 14 additional spaces available within 50 metres along New Compton Street.

The substantial provision of cycle parking within the scheme will alleviate local demand in these areas compared to the sites permitted use. The spaces will offer additional short-stay facilities for future occupants. This therefore represents a robust approach to ensure a policy-compliant scheme.

# Appendix 1

## Trip Rate Calculation

### TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT

Category : A - OFFICE

MULTI-MODAL TOTAL VEHICLES

#### Selected regions and areas:

01	GREATER LONDON	
HM	HAMMERSMITH AND FULHAM	1 days
LB	LAMBETH	1 days
TH	TOWER HAMLETS	1 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

**Primary Filtering selection:**

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Gross floor area  
 Actual Range: 2036 to 7049 (units: sqm)  
 Range Selected by User: 408 to 10000 (units: sqm)

Parking Spaces Range: All Surveys Included

**Public Transport Provision:**

Selection by: Include all surveys

Date Range: 01/01/16 to 07/06/22

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

**Selected survey days:**

Monday	1 days
Tuesday	1 days
Wednesday	1 days

*This data displays the number of selected surveys by day of the week.*

**Selected survey types:**

Manual count	3 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.*

**Selected Locations:**

Town Centre	2
Neighbourhood Centre (PPS6 Local Centre)	1

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

**Selected Location Sub Categories:**

Built-Up Zone	1
High Street	2

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

**Inclusion of Servicing Vehicles Counts:**

Servicing vehicles Included	5 days - Selected
Servicing vehicles Excluded	1 days - Selected

**Secondary Filtering selection:**

**Use Class:**  
 Not Known 3 days

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.*

**Filter by Site Operations Breakdown:**

All Surveys Included

**Population within 500m Range:**

All Surveys Included

## Secondary Filtering selection (Cont.):

Population within 1 mile:

50,001 to 100,000	2 days
100,001 or More	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

500,001 or More	3 days
-----------------	--------

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	1 days
No	2 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

6a Excellent	1 days
6b (High) Excellent	2 days

This data displays the number of selected surveys with PTAL Ratings.

*LIST OF SITES relevant to selection parameters*

1	HM-02-A-01 QUEEN CAROLINE STREET HAMMERSMITH	REGUS OFFICES  Town Centre Built-Up Zone Total Gross floor area: <i>Survey date: MONDAY</i>	2036 sqm <i>13/11/17</i>	HAMMERSMITH AND FULHAM  <i>Survey Type: MANUAL</i>
2	LB-02-A-02 STREATHAM HIGH ROAD STREATHAM	MUSIC COMPANY  Town Centre High Street Total Gross floor area: <i>Survey date: TUESDAY</i>	3054 sqm <i>05/11/19</i>	LAMBETH  <i>Survey Type: MANUAL</i>
3	TH-02-A-01 CAMBRIDGE HEATH ROAD BETHNAL GREEN	OFFICE SPACE FOR RENT  Neighbourhood Centre (PPS6 Local Centre) High Street Total Gross floor area: <i>Survey date: WEDNESDAY</i>	7049 sqm <i>06/03/19</i>	TOWER HAMLETS  <i>Survey Type: MANUAL</i>

*This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.*

*MANUALLY DESELECTED SITES*

Site Ref	Reason for Deselection
EN-02-A-01	car parking
KN-02-A-01	car parking

23:00 - 23:30									
23:30 - 24:00									
Total Rates:		0.252			0.251			0.503	

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database.  
[No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

#### Parameter summary

Trip rate parameter range selected:	2036 - 7049 (units: sqm)
Survey date date range:	01/01/16 - 07/06/22
Number of weekdays (Monday-Friday):	3
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	2

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

Total Rates:		1.762			1.523			3.285	

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

Total Rates:		1.802				1.844			3.646

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.
