

TOPSOIL AND SUBSOIL

300mm of topsoil (to be within BS 3882:2015 specification for topsoil for trees and shrubs) shall be provided, with suitable (loosened) subsoil to provide the minimum of the remaining rooting depth. If suitable subsoil is not available to provide the remaining rooting depth then Subsoil to BS8601:2013 may be imported. Normal rooting depths are 450mm for grass, 600mm for shrubs and 900mm for trees, comprising both subsoil and topsoil.

All topsoil and subsoil should be compacted in layers and fully saturated before being allowed to settle for a minimum of 1 week and topped up as necessary.

Topsoil to be spread to a depth 25mm above adjacent surfaces, with a settled depth 10mm below hard surfaces including mulching depth. Subsoil to be graded in accordance with BS 8601.

PLANT SPACING

All plants will be spaced as per the planting plan and schedule to create the correct coverage in the desired area. Once planting has been completed, a 50mm layer of bark should be used to mulch the beds, increasing water retention and to naturally assist in repressing weed growth. All compost, bark mulch and soil conditioner to be peat-free. A minimum of 25% of all vegetation to be planted must have been reared in peat free compost, and ideally sourced from local suppliers.

PLANTING TIMES

Deciduous Trees and Shrubs:	Late October to late March.
Conifers and Evergreens:	September/ October or April/ May.
Herbaceous Perennials :	September/ October or March/ April.
Dried Bulbs and Tubers:	September/ October

Note: Container grown plants may be planted at any time if ground and weather conditions are favourable. If in doubt, contact Landscape Architect.

WATERING

As necessary to ensure establishment and continued thriving of planting and grass areas.

Work Shedule:

All hard and soft landscaping works shall be carried out in accordance with the approved landscape details by not later than the end of the planting season following completion of the development or any phase of the development. Any trees or areas of planting which, within a period of 5 years from the completion of the development, die, are removed or become seriously damaged or diseased, shall be replaced as soon as is reasonably possible and, in any case, by not later than the end of the following planting season, with others of similar size and species, unless the local planning authority gives written consent to any variation.

GENERAL NOTES.

This drawing remains the copyright of Phil Allen Design Limited. All dimensions to be checked prior to commencement of any works, and/or preparation of any shop drawings on site. Any dimensional discrepancies and alterations to be referred to the Landscape Architect.

DO NOT SCALE FROM THIS DRAWING.
