1. INTRODUCTION

Integrum Site Services were requested, on behalf of their Client to carry out a Phase 1 Desk Study for a proposed redevelopment at Arches 29 - 41 Castle Mews, London, NW1 8SY.

This report details the desk study works carried out, presents the results and discusses the findings in relation to the proposed development.

2. THE SITE

2.1 Site Location and Topography

The site is a set of railway arches and adjacent warehouse at Castle Mews to the south of Castle Road, Camden, London NW1 and west of the London Overground rail line (Figures 1 & 2). OS map information suggests the site to be at an elevation of about 30m OD. The site covers an area of about 0.1 Ha. Surrounding property is mixed use residential, schools, commercial & light industrial.

At the time of the desk study the site comprised an empty former builders merchants premises.

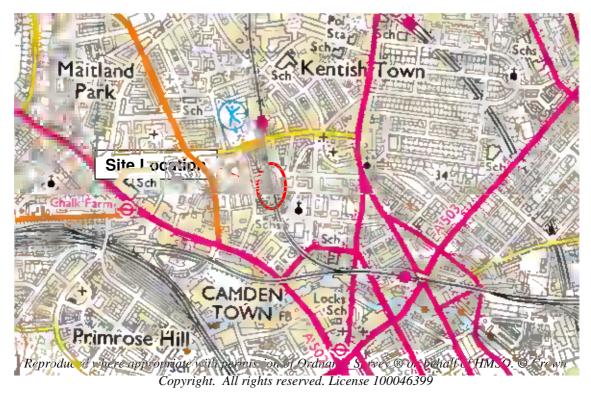

Figure 1: Site Location

Figure 2: Aerial Image (© Google 2024)

2.2 Geology

British Geological Survey (BGS) information shows the site to be underlain by:

Superficial deposits: No superficial deposits.

Bedrock geology: London Clay Formation - Clay, silt and sand. Sedimentary bedrock formed between 56 and 47.8 million years ago during the Palaeogene period.

One BGS borehole database record is shown near to the site. The record is for borehole TQ28SE853 just west of the site at Harmood St. The borehole dates from 1974 and was to 15m depth. Ground strata were recorded as Fill (Clay with gravel and brick fragments) to 1.9m depth over a firm to stiff, becoming stiff and very stiff at 6.2m, fissured brown or grey silty Clay.

2.3 Proposed Development

The scheme is for a shell and core refurbishment to the arches with improvements in the form of new infills to the viaduct where required and to replace life expired elements such as the warehouse roof.

The proposals compromise:

• Demolition of all front infills and all the mezzanines, leaving the two northernmost arches open for use as yard/parking space.

- Arches 38 and 39 will be secure external storage with palisade sliding gates.
- Rebuilding front infills to arches 37 and 36.
- Demolition of defective areas of the existing warehouse.
- Reconstruction of the southern end the warehouse.
- Extension to the North end of the warehouse to fully enclose arch 35.
- Alterations to the existing warehouse consisting of new mono pitched roof and repairs to the flank wall.
- Introduction of cycle parking spaces

Drawings at **Appendix A** show the existing and proposed site layout. The scheme remains an industrial / commercial land use. No areas of soft landscaping or about ground planting are proposed.

2.4 Previous Reports

No previous ground investigation type reports pertaining to the site have been revealed as part of this desk study or provided by the Client.

3. DESK STUDY

3.1 Information Sources

Desk study information was mostly obtained from a Landmark Ltd EnviroCheck Report dated September 2024.

The EnviroCheck report included:

- Historic maps
- Historic data report
- Site sensitivity data
- Preliminary UXO assessment

A copy of the EnviroCheck data is enclosed as **Appendix C** and the preliminary UXO assessment as **Appendix D**. Other historic data from online local history sources was also searched.

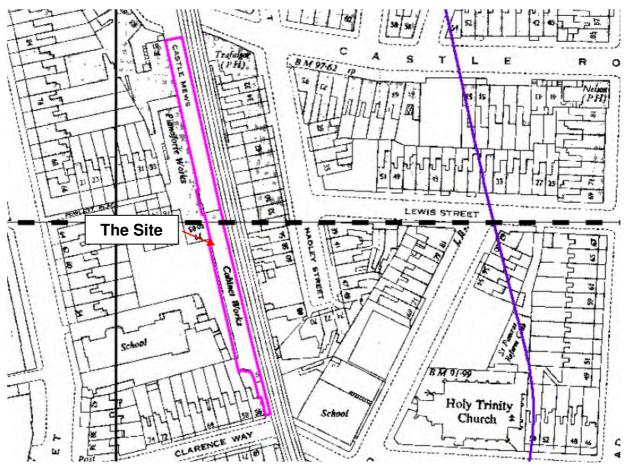

3.2 Historic Maps & Images

Historic Ordnance Survey and other maps from 1851 to present were inspected at scales of between 1:500 and 1:10560. Copies of the larger scale maps are enclosed within Appendix C.

The earliest map consulted was an OS Historical Town Plan from **1851**. Detail on the map was unclear, but the railway was present as the *Hampstead Junction Railway* with the site shown adjacent to the west. Castle Road was present nearby (named *New Hampstead Road* as that time) and the surrounding road network broadly similar to later maps. A later OS Historical Town Plan for **1873** showed the site in more detail. It was again shown adjacent to the railway. Some buildings were shown to the immediate west with an outline shape that does not suggest housing and hence potentially an industrial land use. A later OS Town Plan for **1895** showed the site annotated as *Pianoforte Manufactory*.

The OS Plan for **1916** and an OS aerial photograph for **1946** showed no significant change. Plans for **1954** showed the site as *Castle Mews*. It showed the adjacent building to the west of the site as the *Pianoforte Manufactory* (Figure 3). The southern part of the site was shown as a *Cabinet Works*. A school was to the southwest of the site. The **1955** map was similar.

Reproduced where appropriate with permission of Ordnance Survey ® on behalf of HMSO. © Crown Copyright. All rights reserved. License 100046399

Figure 3: Extract OS Plan 1954

1975 been replaced by housing. No changes to the site were evident.

Later large scale OS maps for years up to **1995** and an OS aerial photograph from **1999** showed no significant changes. Google Earth aerial images from **1999** to **2024** showed no discernible changes.

3.3 Site Sensitivity Data

Other environmental information listed in the EnviroCheck Report can be summarised as:-

Contaminated Land Register Entries and Notices - None listed within 904m.

<u>Discharge consents</u> - Nearest at 381m to the south and for cooling water discharge. Revoked or Lapsed. None other within 500m.

<u>Integrated Pollution Controls</u> - Nearest at 447m to the southwest and for Camden Goods Yard.

<u>Local Authority Pollution Prevention And Controls</u> - Nearest at 133m (authorisation revoked) for PG6/34 Respraying of road vehicles. Nearest permitted at 163m (permitted) south for a PG1/14 Petrol filling station. 12 others within 0.5km.

Surface water features - nearest at 294m south of the site.

<u>Pollution Incidents to Controlled Waters</u> – Nearest at 476m (Category 3 minor incident) from 1996. Next nearest 784m (Category 3 minor incident) from 1999.

Registered Radioactive Substances – None within 400m.

<u>Water Abstractions</u> – Nearest at 218m, Kentish Town Sports Centre. Next nearest at 436m related to Regents Park Canal.

<u>Groundwater vulnerability</u> (Combined) – Unproductive Aquifer.

<u>Bedrock aquifer designation</u> – Unproductive Strata.

<u>Superficial aquifer designation</u> – No superficial aquifer.

<u>Source Protection Zones</u> – None listed within 917m. Zone II (Outer Protection Zone) at 917m. None other listed.

Extreme Flooding from Rivers or Sea without Defences - None

<u>Integrated Pollution Control Registered Waste Sites</u> – none listed

Historical Landfill Sites - None listed.

<u>Local Authority Landfill Coverage</u> - Nearest at 864m.

Potentially Infilled Land (Non-Water) - Nearest at 805m

Potentially Infilled Land (Water) – Nearest at 374m (1951 mapping). 2 other within 500m.

Registered Waste Treatment or Disposal Sites - Nearest at 409m (licence surrendered).

<u>Radon</u> - The site is within a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). Data in the Envirocheck report states no radon protection measures are necessary in the construction of new dwellings or extensions.

<u>Contemporary trade directory entries</u> – Buttles plc, Builders Merchants at the site. Numerous others within 1km. Reviewed and considered unlikely to impact the site.

<u>Points of Interest - Numerous within 1km. Reviewed and considered unlikely to impact the site.</u>

<u>Fuel stations entries</u> – Nearest at 163m (obsolete). 2 other obsolete within 500m. Nearest active at 861m.

3.4 Historic Data Report

The EnviroCheck Report includes a Historical Data Report. Selected information relevant to the site can be summarized as:-

<u>Areas Cleared Due To Enemy Action</u> – nearest at 51m. 9 other entries within 300m.

Asbestos - Risk shown at 2m & 3m from the site.

Potentially Fuel-related Tanks - Risk shown at 32m from the site

<u>Underground Fuel Tanks</u> - Risks shown at 10m, 11m & 32m from the site

<u>Potentially Contaminative Industrial Uses (Past Land Use)</u> – nearest at 3m for railways. Next nearest at 207m. Numerous others within 1km. Reviewed and considered unlikely to impact the site.

Potentially Infilled Land (Water) – 805m from the site.

Potentially Infilled Land (Non-Water) – 805m from the site.

3.5 Local History & HEAP resources

Searches were made for local authority Historic Environment Action Plans (HEAP) & other local history information sources. No significant information was revealed.

3.5 Walkover Survey

A detailed site visit was made by an Integrum Ltd engineering geologist. The visit was on the 30th August 2024. At the time of the walkover the site was vacant but had until recently been a timber suppliers and building supplies merchants premises. The site comprised a set of 19th Century railway arches forming support to a rail line viaduct above and an adjacent long thin external yard. The southern part of the yard was covered to form a more modern warehouse. Photographs taken at the walkover and closed as **Appendix B**.

The main entrance was located off Castle Road at the north of the site and access was through a set of tall double gates. The external yard provided access to seven arches to the east side of the side and to a warehouse that occupied the southern part of the site.

Arches 41 & 40 were the first (northern most) arches. They had a brick infill frontage with windows. Inside had been stripped of fittings. They had a concrete floor that although aged was in reasonable order.

Arches 39, 38, 37, 36 were partially infilled but open to the elements. They again had been stripped and had concrete floors in reasonable order.

Arch 35 was partially brick filled with a door to the courtyard and also partially within the warehouse structure. The southern part of Arch 35 and Arches 36 to 29 were connected internally by the warehouse structure which adjoins the viaduct and spans the southern yard area. Each arch hd a tall and narrow jack arch with various infills, some of which were partial infills. Floors were concrete in a reasonable order.

Generally the site was free from any stored waste, any fly tipping, or any indications of likely sources of contamination. There were only small areas of concern as follows

- Within Arch 29 a small spillage of what appeared to be a black tar like residue.
- At Arch 38, 4 No plastic containers of engine oil and flammable products.
- Adjacent to Arch 40 in the courtyard a skip which was partially loaded with waste concrete.

There was no evidence of above ground fuels storage tanks. There was no

evidence of below ground tanks or below ground entries.

3.6 UXO Threat

Parts of London and surrounding districts were heavily bombed during WW2. A preliminary unexploded ordnance (UXO) threat assessment was ordered from Landmark Information Group. A copy of the report is enclosed as Appendix D. The report was carried out in accordance with CIRIA Report C681 Unexploded ordnance (UXO) A guide for the construction industry.

The report showed the site as in an area categorised as "very high" level of bombing. and showed that WW2-era bombing and bomb damage were recorded in close proximity. Air Raid Precaution (ARP) records did not identify any high explosive (HE) bomb strikes on-site. Nonetheless, five HE bomb strikes were recorded within 140m of the Study Site, the closest of which was located 60m to the west. Two unexploded bombs were documented 850m south-west and 855m southwest of the Site. Six V1 rocket strikes were also recorded within the wider area, with the closest impacting 160m to the south-east.

The Landmark report recommended that Detailed UXO Threat and Risk Assessment was required.

3.7 Subterranean Rivers

The site is within the Fleet Valley area of London. Prior to rapid urban development in the early-mid 19th Century, the area was open land & pasture adjacent to the River Fleet. The area was drained and the River Fleet culverted below ground in the mid-19th Century. The river is still present and flows underground from Hampstead through central London to exit in the Thames near Blackfriars Bridge. The Fleet is now used as a foul sewer.

Information from the Landmark Envirocheck did not give any information as to the presence of The Fleet. Its location is shown in part on Bing maps (Figure 4). The Fleet is shown as running below the northern part of the site. No physical evidence was present at site as to the presence of The Fleet. Further information should be obtained from Thames Water or via Utilities searches.

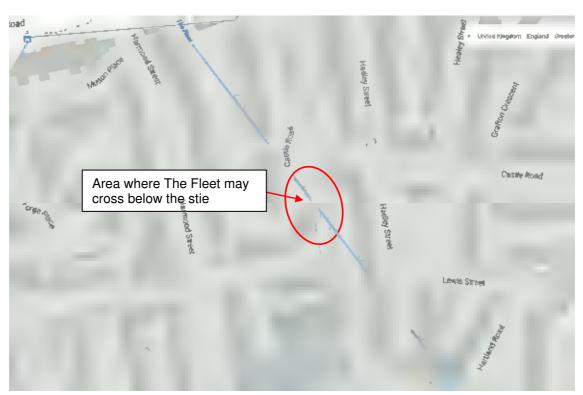

Figure 4: Extract Bing Mapping (© Google 2024)

4. CONCEPTUAL MODEL & RISK ASSESSMENT

4.1 Background

The risk of contamination in the ground impacting a site or any proposed development is typically assessed using a pollutant transfer model. For a risk to exist at a site there must be a *hazard* (eg. pollution in the ground), a *receptor* (eg building occupants, controlled waters) and a *transfer path* whereby the hazard can impact the potential receptor.

Only if a hazard, receptor and a pathway exist can contamination take place. The legal definition of contaminated land is precise and given in *Part IIA* of the *Environmental Protection Act 1990* (as amended by the *Environment Act 1995*). However planning guidance, land transfer liabilities and redevelopment issues usually mean that land contamination has to be considered and dealt with on most previously used land even though the site may not be 'contaminated land' within any strict legal definition. The term *potential land contamination* is therefore more typically applied to such land.

The likely affect of any contamination in the ground is assessed by forming a **Conceptual Model**. The Conceptual Model presents the likely sources of contamination, the likely targets and considers the pathways via which the sources of contamination may impact the targets. A *Preliminary Conceptual*

Model is formed at the desk study stage and is used to determine the need for an intrusive ground investigation. The model can then be updated following the results of any intrusive investigation and the updated model used as a basis for recommending remediation works.

The basis for the conceptual model and any following intrusive investigation is generally in accordance with advice that has been prepared by UK Government bodies (*Refs 1, 2, 3*). The guidance is not yet fully formulated and not all risks have been defined. However the procedures to be used are well illustrated and, with the application of engineering judgement, a sound assessment may be made for most sites.

4.2 Site Specific Conceptual Model

4.2.1 Hazards

Desk study information has revealed the following potential hazards:-

Hazard	Source	Comments
Oils, fuels	No potential source revealed other than some isolated plastic containers	Unlikely to be present in significant volumes
Metals and / or asbestos fibres	Lead, zinc, copper or asbestos fibres may potentially be present in eg hardcore used below hard standings etc.	Site has concrete surfaces, likely to be over hardcore of varying ages
PAH's VOC's, heavy metals etc	Small surface spillages of eg cleaning fluid associated with former & current uses.	Unlikely to be present in significant volumes.
Ground gases (methane & carbon dioxide)	On or Off site backfilled quarries, ponds etc.	No major sources of potential gases shown. Large foul sewer (The Fleet) potentially below site

It should be noted that the above table refers to potential hazards only.

4.2.2 Receptors

Desk study information has revealed the following potential receptors:-

Comments	
 The site is to have a	
occupiers	

Receptor	Where	Comments
	Site workers and future maintenance workers	Site workers and future maintenance workers need to be protected from potential contamination.
Surface waters	Nearest at over 290m from the site	Risks to surface waters considered low.
Groundwaters	Below the site	Risks to groundwaters are considered low.

4.2.3 Pathways

Desk study information has revealed the following potential pathways:-

Pathway	Receptor	Comments
Ingestion	Humans	The site to be developed for a commercial land use. No external soft landscaped areas are proposed. Ingestion is unlikely.
Dermal Contact	Humans	The site to be developed for a commercial land use. No external soft landscaped areas are proposed. Dermal contact is unlikely.
Inhalation (dusts)	Humans	Dusts may be inhaled from soils during construction of eg new foundations & floors.
Migration (gases)	Humans / buildings fabric	A dampproof membrane & modern air tightness requirements shall afford some protection top enclosed buildings. Only low gases risks were shown by the desk study information.

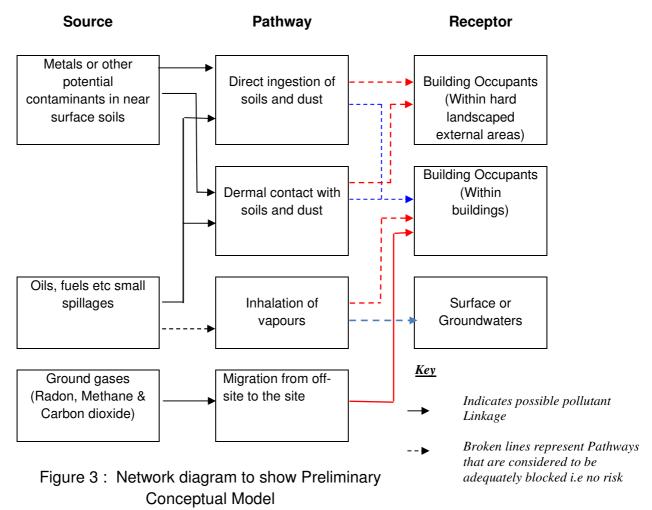

Pathway	Receptor	Comments
Leaching, adsorption etc	Groundwaters	Possible risks to surface & groundwater are
	Surface waters	considered low

4.2.4 Preliminary Conceptual Model

The above information leads to the following *Preliminary Conceptual Model*:

A set of railway arches at 29-41 Castle Mews, Camden is to undergo a shell and core refurbishment with improvements in the form of new infills to the viaduct where required and to replace life expired elements such as the warehouse roof. The refurbished site shall be used for commercial uses only. Desk study information has revealed only a low risk related to contamination.

The network diagram at Figure 5 indicates the potential sources, pathways and targets more clearly.

4.3 Preliminary Qualitative Risk Assessment

The findings of the preliminary Conceptual Model have been used to form a Qualitative Risk Assessment. The assessment uses procedures defined by Contaminated Land Report (CLR) 11 and updated October 2020 guidance (*Ref 5*). The risks identified are in accordance with the DEFRA and Contaminated Land Report (CLR) 6 Site Prioritisation and Categorisation Rating system as shown by Table 4-1 below. The risk assessment may need to be updated following a Phase 2 investigation or during the project cycle if unexpected made ground etc is revealed.

Table 4-2 gives a site-specific assessment of the risks using the above terminology and considering each potential pollutant linkage.

In line with general guidance, where ground investigations are required to clarify any risk, then a moderate risk rating may need to be assigned in the preliminary risk rating. The risk may be reduced following a Phase II intrusive ground investigation.

Table 4-1: Risk Rating Terminology

Risk Rating	Description				
· · · · · · · · · · · · · · · · · · ·					
HIGH	Contaminants very likely to represent an unacceptable risk to identified targets				
	Site probably not suitable for proposed use				
	Enforcement action possible				
	Urgent action required				
MEDIUM	Contaminants likely to represent an unacceptable risk to identified targets				
	Site probably not suitable for proposed use				
	Action required in the medium term				
	Contaminants may be present but unlikely to create				
LOW	unacceptable risk to identified targets				
	Site probably suitable for proposed use				
	Action unlikely to be needed whilst site remains in				
	current use				
	If contamination sources are present, they are				
NEGLIGIBLE	considered to be minor in nature and extent				
	Site suitable for proposed use				
	No further action required				

Table 4-2: Qualitative Risk Assessment

	Occupiers		assessment
			required)

The preliminary conceptual model and the qualitative risk assessment show that future site users within hard surfaced areas are not considered likely to be at significant risk from any soils contamination that may exist below the site. A low to medium risk related to ground gases is theoretically present as is a potential risk related to unexploded ordnance. Section 5 discusses each issue in more detail.

5. DISCUSSION

5.1 Potential land contamination

Risks related to soil contamination causing harm to future site visitors or users is considered low. The existing and proposed new concrete surfacings shall act as adequate barrier between any potential contamination in the ground and the people using the site.

A potentially higher risk exists to future maintenance workers and hence any new services trenches should be over excavated by 150mm with arisings disposed of off site. Backfill should be a clean imported granular fill.

No future ground investigation specifically related to potential soil contamination is considered necessary.

5.2 Potential gases contamination

No sources of gases from infilled land were identified close to the site. No likely sources of gases due to the breakdown of organic contaminants such as hydrocarbons were identified at the site.

A potential source of ground gases (methane and carbon dioxide) was however potentially identified as the subterranean Fleet River that runs under the northern part of the site. The Fleet River is now used as a foul sewer and hence has a potential to produce gases. The sewer is likely to be adequately ventilated and risks of it producing significant gases volumes that could transfer to the buildings is low. Further information should be sought about the depth, position and nature of the culvert at this location to confirm that risks are low.

5.3 Groundwater & surface water

Desk study information did not identify any potential risks related to groundwater or surface water.

5.4 Unexploded ordnance (UXO)

The preliminary UXO assessment by Landmark recommended a detailed UXO threat and risk assessment.

5.5 Suggested further investigations

No ground investigation specifically related to potential soil contamination is recommended at this time. Should other investigations related to structural design etc require boreholes and those show significant depths of made ground, risks may need to be reappraised. Similarly a Discovery Strategy should be in place in the event that suspicious materials or deep made ground are revealed during any new excavations for eg foundations or drainage.

The above is based on a commercial or industrial end use. If the scheme end use is changed to a more sensitive use such as housing then risks shall need to be reappraised.

No specific investigation for a gases risk is considered necessary at this time. However further information should be sought about the depth, position and nature of the sewer that runs below the site. That information should be used to carry out a further risk assessment related to gases.

6. CONCLUSIONS

A Phase 1 desk study for set of arches at 29 to 41 Castle Mews, Camden NW1 has shown low risks related to potential soil contamination. Further information retrieval related to the subterranean river / sewer have been recommended. A preliminary unexploded ordnance (uxo) assessment obtained from Landmark Ltd has recommended a detailed uxo threat and risk assessment

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Historical Building Plans Information

This data set contains potentially contaminative features such as asbestos, petrol, oil and tanks captured from Historical Building Plans. The Historical Building Plans were produced by the London-based firm Charles E. Goad Ltd. as fire insurance plans, dating back to 1885. The firm ceased production of fire insurance plans in 1970. Most of the important towns and cities of the British Isles are covered. Historical Building Plans are usually at the scales of 1:480 (1 inch to 40 feet) for the British Isles. They were updated every 5-6 years by means of revision sheets designed to be pasted on to the original plans.

It should be noted that Historical Building Plans are only available for certain major towns and cities and in some cases there may only be partial coverage of the search area. It cannot therefore be assumed that the absence of responses under the Historical Building Plans section of this report indicates that no hazards exist. Please check the Historical Building Plans Map List table in the Historical Map List section of this report to establish if Historical Building Plans are available for this search area.

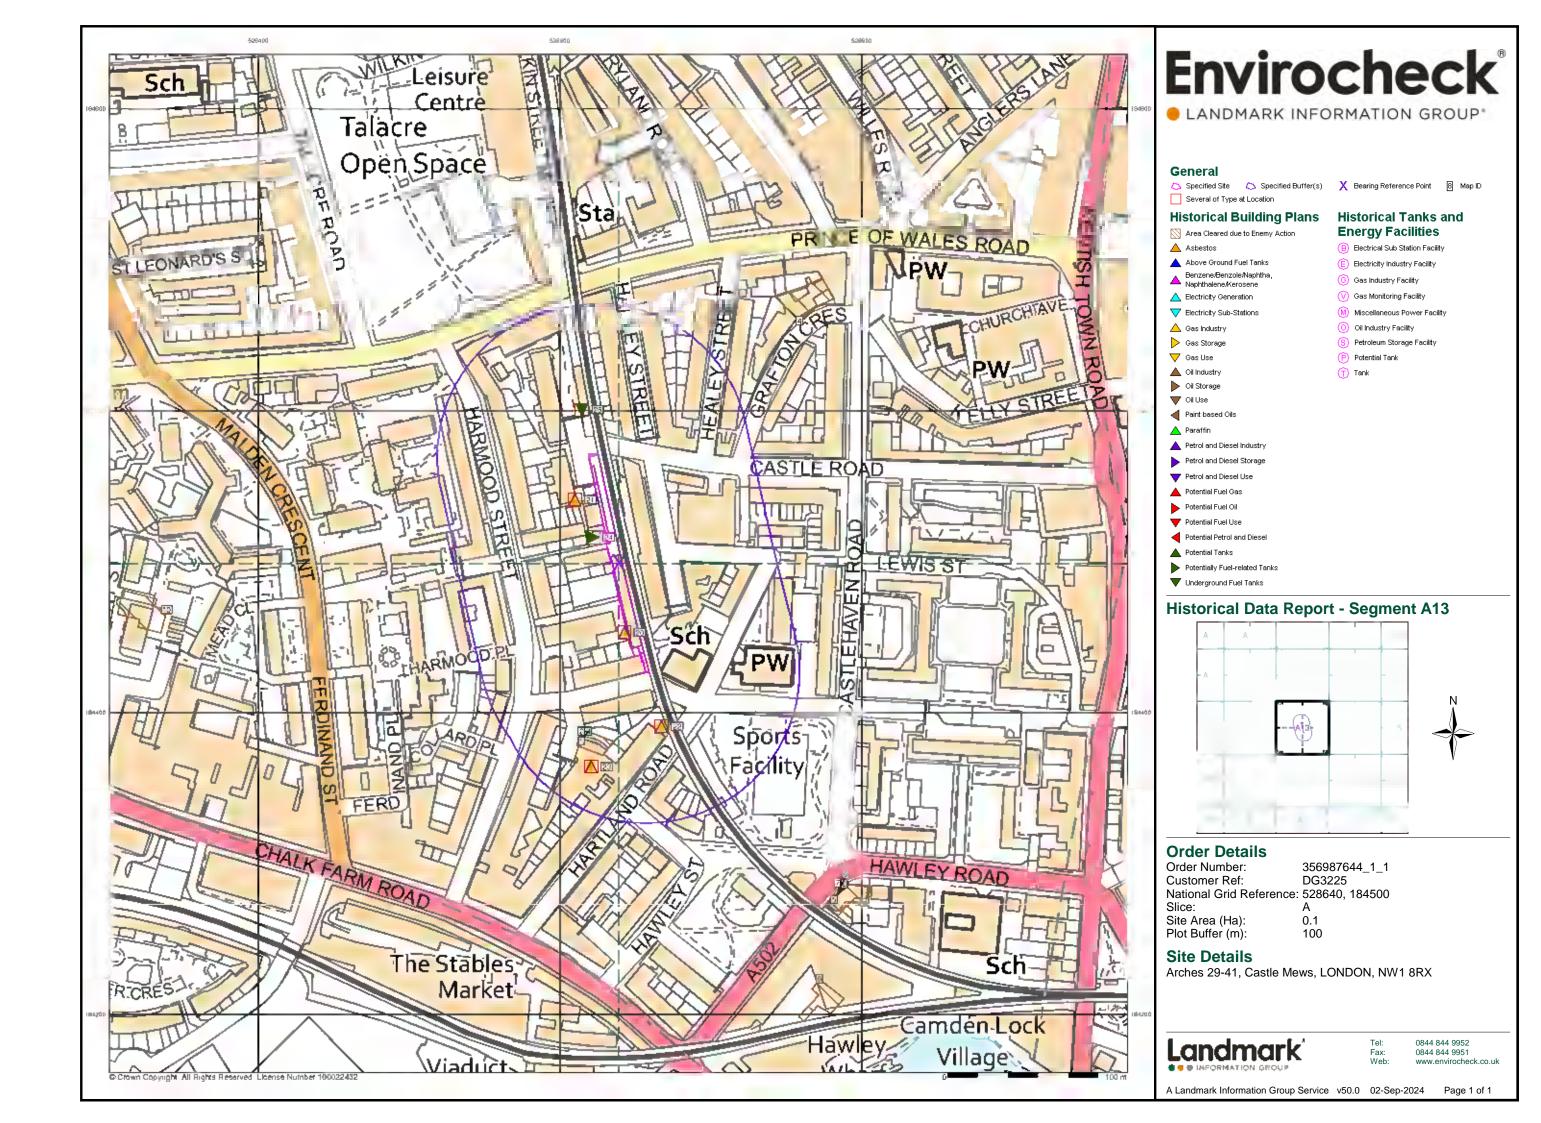

Historical Land Use Information

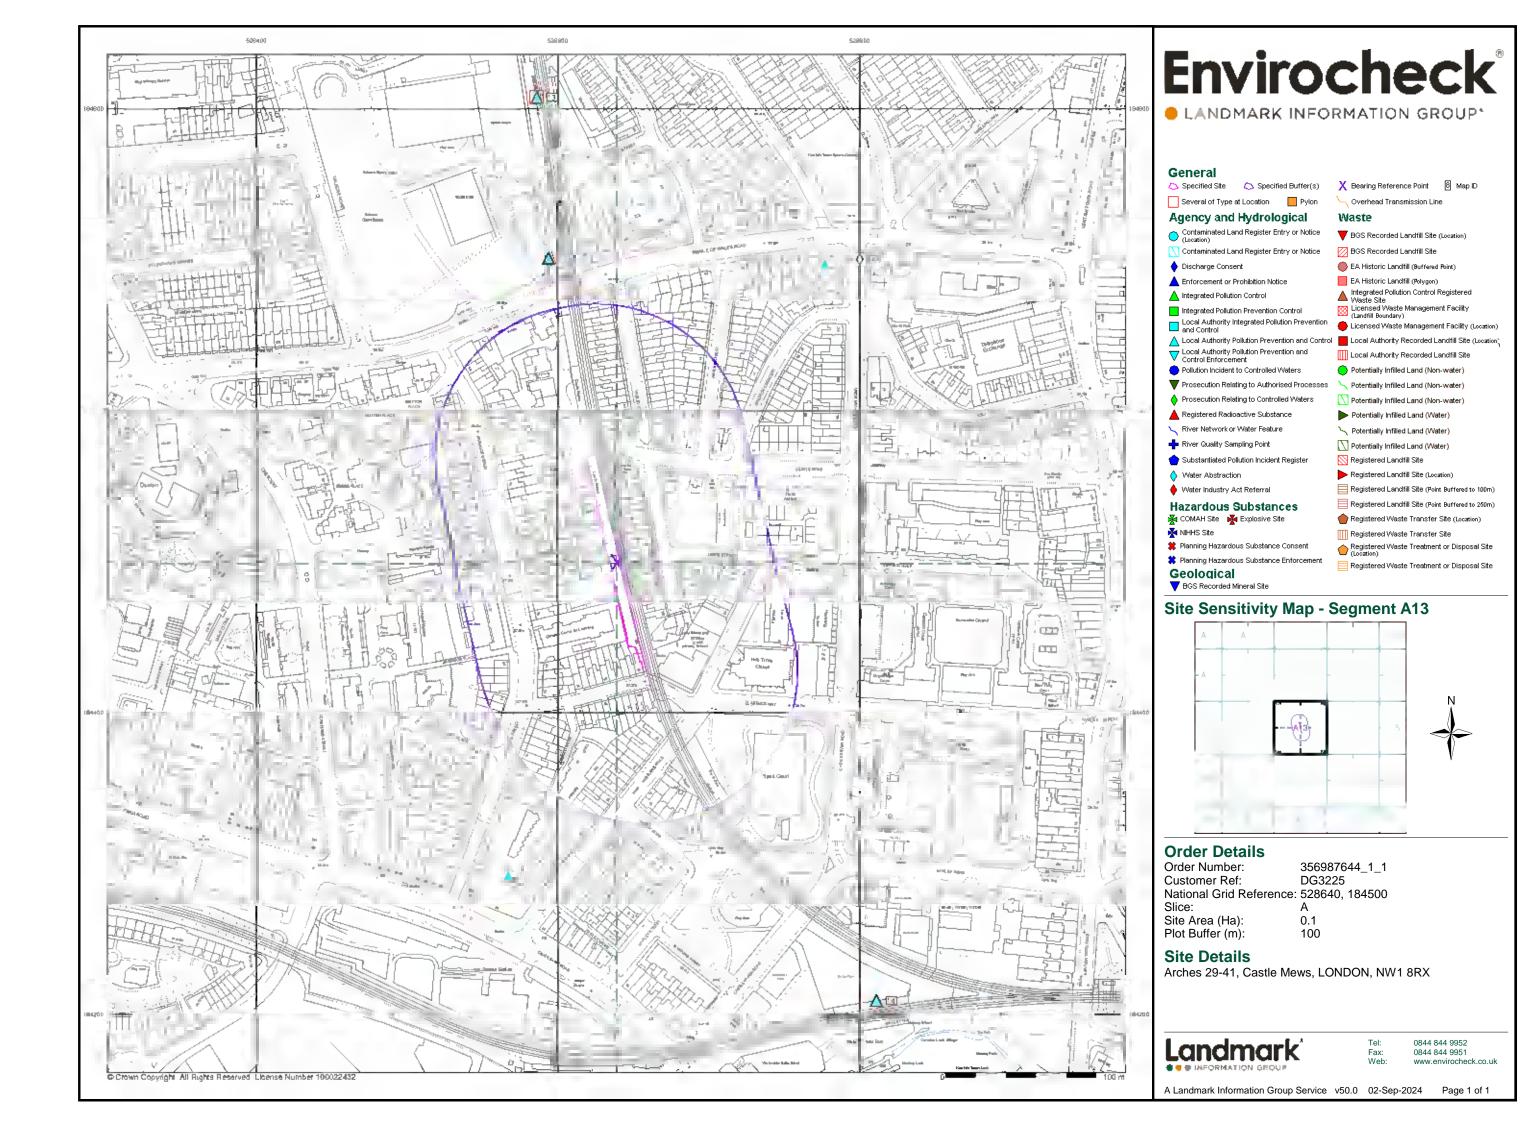

Landmark's Historical Land Use Data is the result of combined analysis of historical map data captured at 1:10,560 and 1:10,000. A unique comprehensive database of Historic Land Use from the 1840's to 1996 it includes 67 different types of potentially contaminated past industrial land use. This entailed analysing over 60,000 maps and is drawn from at least four, and up to six historical map editions. In addition a seventh layer was also created, known as the land use layer, containing areas of infilled land which are plotted via comparison between two or more map editions.

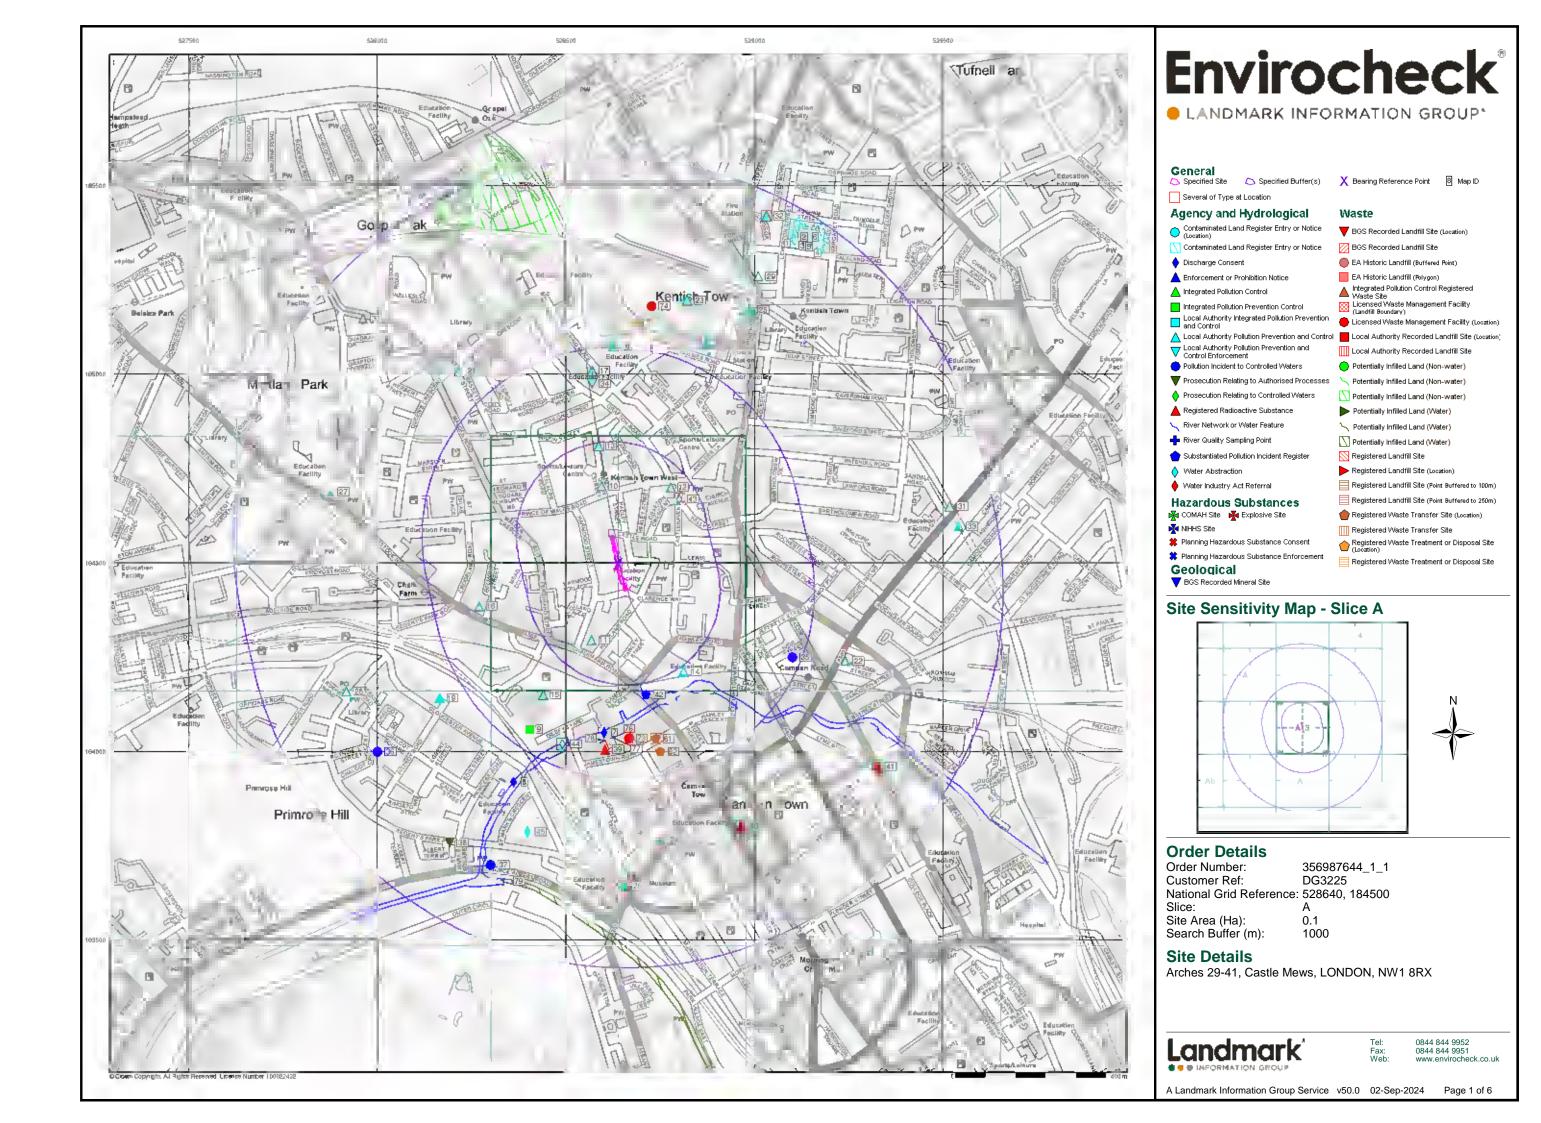

Historical Tanks and Energy Facilities

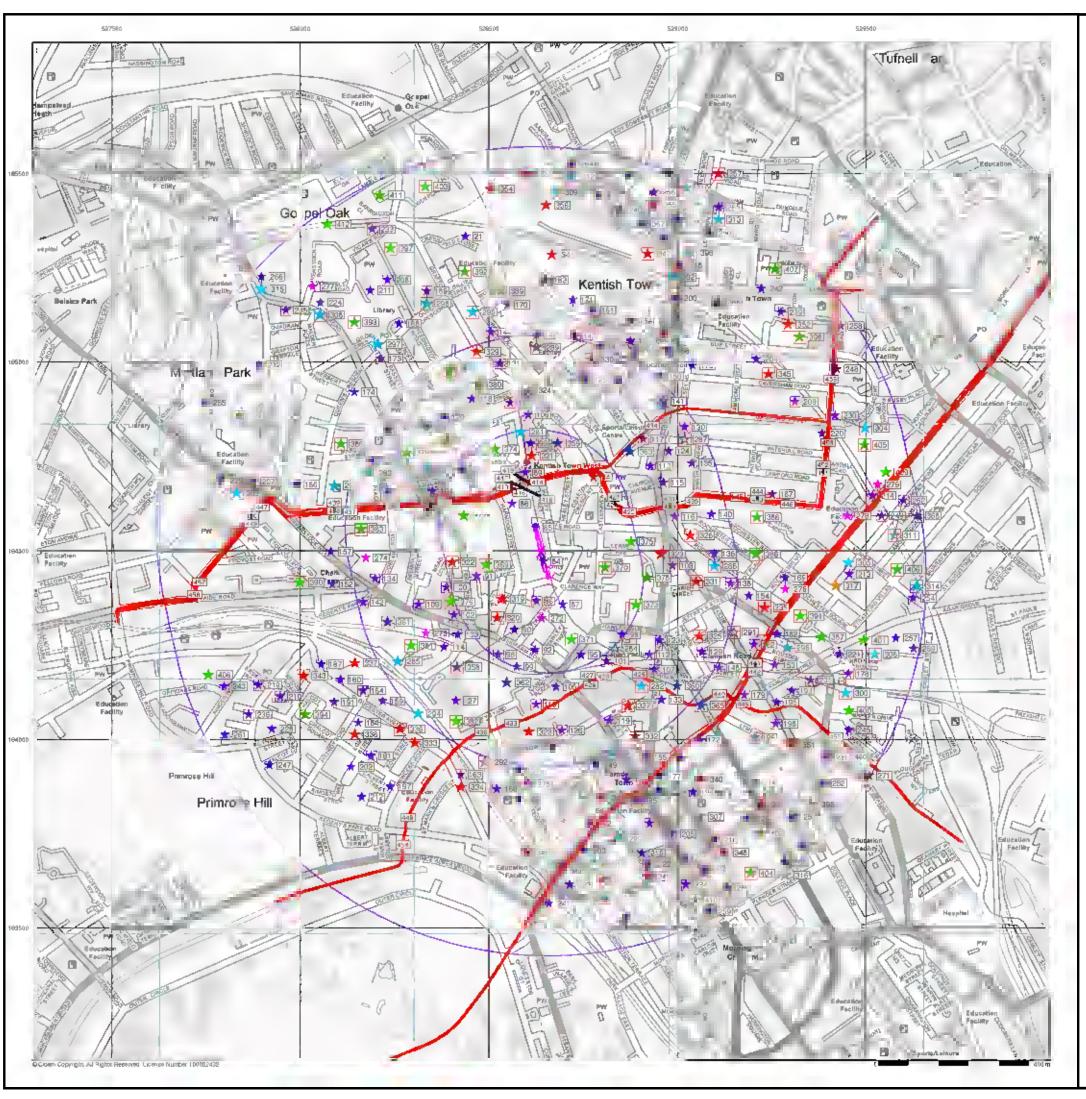

In addition to HLUD, additional analysis uncovered some of the most dangerous sources of contamination (past and present tanks, petrol storage, oil, gas, electricity, miscellaneous facilities). This data set covers over 390,000 Historical Tanks and Energy facilities in Great Britain and was captured from post war 1:2500 and 1:1250 Ordnance Survey historical mapping covering a period from 1943 to 1996.

LANDMARK INFORMATION GROUP®

London

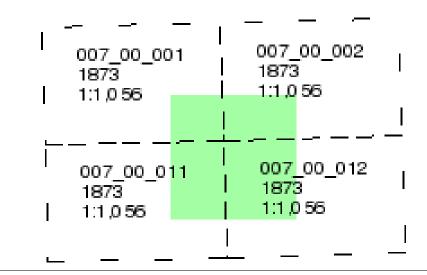

Published 1873

Source map scale - 1:1,056

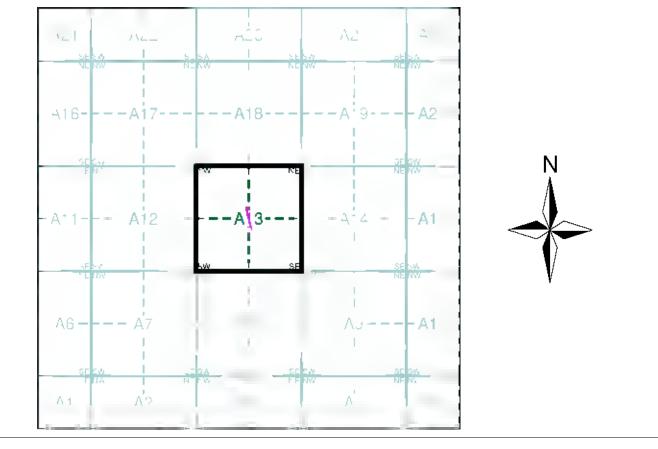

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LANDMARK INFORMATION GROUP*

London

Published 1851

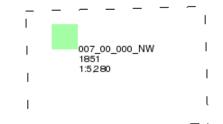

Source map scale - 1:5,280

The historical town plans shown derive from Ordnance Survey mapping from the early to mid 1850s. The 1:2640 scale was introduced in the early 1850s, to survey districts covered by the Local Boards of Health and for a map of the Osborne Estate of Queen Victoria. The general style is similar to that of the early 1:2500s published shortly afterwards.

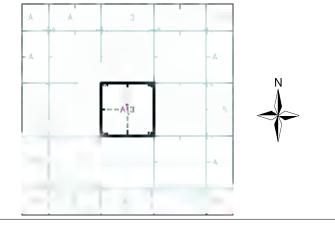

1:5280 scale was surveyed shortly afterwards in the mid 1850s as general purpose mapping with a standard of content similar to the more contemporary 1:10.560 mapping. The scale was also used for a reduction of the 1:1056 skeleton survey of London that was undertaken between 1848 and 1850.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LANDMARK INFORMATION GROUP*

London

Published 1875

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Historical Aerial Photography Published 1946 Source map scale - 1:1,250

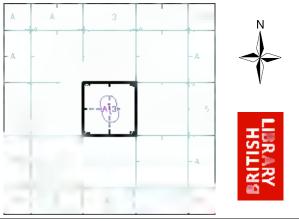

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was rechecked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Supply of Unpublished Survey Information

Published 1973 - 1974

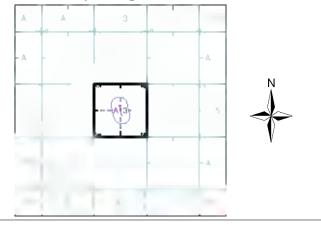

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Seamer

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Appendix D - Landmark UXO Report

Castle Mews

Landmark Order No: 356987644_2

Client Reference: DG3225

Preliminary Unexploded Ordnance (UXO) Threat Assessment

Meeting the requirements of the UK's

Construction Industry Research and Information Association's UXO Risk Management Framework "Unexploded Ordnance (UXO) – A Guide for the Construction Industry" (C681)

Landmark Information Group in partnership with 6 Alpha Associates Ltd

Project No.: 11440

3rd September 2024

V2.0

Using This Report

This Preliminary Threat Assessment is designed to inform the reader whether military related Unexploded Ordnance (UXO) is likely to pose a hazard at the Study Site. The assessment is intended as a site-screening tool to meet with the requirement of Stage 1 of the *Health and Safety Executive* endorsed *CIRIA C681 UXO Risk Management Framework* – for which *6 Alpha* were the lead technical author. Whilst the term "Risk" can be justifiably used at this stage, the reader should note that the "Consequence" function of "Risk" is not considered.

There are two prospective outcomes of this report; either the threat level requires a Detailed Threat and Risk Assessment with Risk Mitigation Strategy (Stages 2 and 3 of the *CIRIA C681* framework); or no further action is required.

Two figures accompany the report, the first is the Site Boundary which clearly depicts the area covered by this assessment and the second is the Probability of UXO Encounter at the Study Site. The latter will illustrate any variance in the probability of encountering UXO throughout the Study Site.

Document Scope

In partnership with the *Landmark Information Group, 6 Alpha Associates Limited* (6 Alpha) has been commissioned to provide a UXO Threat Assessment for the Site described as "Arches 29-41, Castle Mews, London, NW1 8RZ", which is centred on *National Grid Reference* 528640, 184500.

Key Findings

During WWII, the Study Site was situated within *St Pancras Metropolitan Borough*, which recorded 59 HE bomb strikes per 100 hectares; categorised as a "very high" level of bombing.

Luftwaffe aerial reconnaissance photography identified Chalk Farm Station (200m south-west), Kentish Town Shunting and Freight Yard (400m north) and St Pancras Goods and Passenger Station (790m south-east) as primary bombing targets.

Air Raid Precaution (ARP) records did not identify any HE bomb strikes on-site. Nonetheless, five HE bomb strikes were recorded within 140m of the Study Site, the closest of which was located 60m to the west. Moreover, two unexploded bombs were documented 850m south-west and 855m southwest of the Site. Six V1 rocket strikes were also recorded within the wider area, with the closest impacting 160m to the south-east.

London County Council (LCC) bomb damage mapping did not record any damage to structures on-site. Nonetheless, extensive bomb damage was documented in the close proximity, with damage ranging from "Blast Damage; Minor in nature" to "Total Destruction" within 100m – including "Seriously Damaged; Doubtful if repairable" recorded to structures as close as 5m east. Further research of historical records also noted bomb damage to Holy Trinity Church in the immediate vicinity (65m east). An analysis of pertinent historical records supplemented with further 6 Alpha research did not identify any evidence of significant military activity within 1,000m of the Study Site.

Therefore, 6 Alpha considers the most likely UXO threat at this Study Site are WWII German airdropped bombs, whilst British AAA projectiles may pose a residual threat.

Recommendations

Given that WWII-era bombing and bomb damage were recorded in close proximity; 6 Alpha considers it reasonably foreseeable that a UXO contamination threat might have been generated at this Study Site. Consequently, and in accordance with CIRIA C681 Chapter 5 on managing UXO risks, 6 Alpha recommends that the next step in managing the prospective UXO risk at this Study Site is:

DETAILED UXO THREAT AND RISK ASSESSMENT

Please contact Envirocheck for further details.

Constraints

The report is also constrained by the following factors:

- The assessment levels have been generated from historical data and third-party sources.
 Where possible 6 Alpha have sought to verify the accuracy of such data, but cannot be held accountable for inherent errors that may be in third-party data sets (e.g. National Archives or library sources);
 - a. Nonetheless, 6 Alpha have exercised all reasonable care, skill and due diligence in producing this report;
- 2. Whilst every effort has been used to identify all potential UXO/explosive threats, there were a number of private facilities which may not have released privately recorded information concerning UXO/explosive threats into the public domain;
- 3. This report is accurate and up to date at the time of writing but cannot account for the release of new information, nor for new evidence concerning the potential for a UXO hazard to exist at this Study Site, which is disclosed after the date of the report's release. Should further evidence of UXO sources be found, or if UXO is found at the Site or nearby in the future, then this assessment for the Study Site is to be reassessed and updated by 6 Alpha.
