

Screen Location and Positioning at Central Saint Giles

Position of the screen is North facing; this means the screen light and 2 small speakers are not facing the 2 residential blocks.

There were suggestions we position the screen to the other end of the piazza, in the opposite direction (south facing) however as you can see from the plan, we have a tree in situ in the middle of the piazza and overhanging glass canopies so this would obstruct the screen from being in position here. It is also worth mentioning the screen and speakers would then face the residential block which would not be ideal. We also must allow access for all emergency services in the event of an emergency, blocking any entrances and positioning the screen the other side of the piazza would impact the emergency services therefore we must have it located in this position below.

The screen will have the news on from 08:00hrs till 12:00hrs with no sound, at 12:00hrs onward the sound will be put on and the screen will be switched off by 20:00hrs and no later.

The screen faces away from the residential blocks, so the screen image is towards the office block as to not disturb the residents in the day. The speaker is also facing the office block, not the residents. The back of the screen is facing towards the residential block.

We have 24/7 security for the building and there will be a Piazza officer patrolling the piazza during the day when we propose to have the screen on. We have a security team of 6 per day and 4 per night, 24/7. We also have a security manager Mon-Fri. We have never had any security related incidents or issues when we have had previous screens. We have never had any crime / anti-social behaviour related incidents because of the screen in previous years. We will be managing the screen in the exact same way as previous successful years, and we can confirm we are the same building management team as before. Please also note, our security teams work closely with the CDA.
