

Hello,

Apologies I missed the deadline for the planning application 2025/1512/P which I now realised was yesterday (site address: 4 Oak Hill Park London Camden NW3 7LG)

My wife and I have recently bought the house 3 Oak Hill Park Mews, NW3 7LH, which is mentioned in the planning application report to be most affected by the noise from the new heat pump to be installed for heating the pool

We wanted to confirm if this is indeed correct as it appears from the map that the units 1 and 2 Oak Hill Park Mews will be physically closer to it than our house?

Lastly, assuming the expected noise levels are as per the report this will probably be fine from our perspective. However, we couldn't see any mention of a post work survey to measure the noise levels after the work is done and confirm they are in line with the predicted levels - this would be good to carry out, and if they are higher than expected carry out the necessary remedial work. Apologies if I missed it

Thanks,
Martin
