2025/1684/P	H Rosnet	63 Judd Street	27/05/2025 14:51:01	OBJ	<p>I would like to express my reservations to the recent application to add labs to the development of the science building at 105 Judd Street</p> <p>Please note I am not against Camden's desire to have a knowledge quarter in Bloomsbury. I am against experiments which use dangerous chemicals in a highly dense residential area. If they are so hazardous they require container cupboards on ground level they should not be expelled into the air - even after treatment - into our lungs.</p> <p>I already have cancer and the thought of being exposed to such pollution unnecessarily is frankly abhorrent.</p> <p>This brings me to my second concern: namely the need to build a further 2 floors to install machinery to deal with these toxic substances 24/7 .</p> <p>Such machinery is not going to be without noise.</p> <p>Given that it will have to run throughout the night it will disturb not only those in adjacent buildings but thousands of residents. This is after all a residential area. Noise travels . Especially at night.</p> <p>Finally I would like to say I find it incredibly unbelievable that the developers applied for permission to be a science resource and only suddenly realised they needed labs. Really??</p> <p>This is not the right place for such use.</p> <p>Citing The Frick as a pre-existing institution carrying out such work does not work. That was deliberately built on an old brownfield site far away from local residents.</p> <p>So: yes to science research, no to laboratory experiments.</p>
