The Wheelylift is unique, simple and space-saving. This affordable invention allows literally anyone to hang up any kind of bicycle effortlessly. The pivoting mechanism of the Wheelylift also makes it very easy to store bicycle(s) in small, narrow spaces, whilst still being able to walk past them. The Wheelylift is very easy to maintain and can be used in practically any location.

#### Space-saving

Because of its vertical suspension system, the Wheelylift can store more cycles per square metre than any other system.

#### Suitable for any type of bicycle

The Wheelylift can lift any type of cycle effortlessly, whether it is light or heavy. The Wheelylift can even lift electric bikes and carrier cycles with no problem..

#### Light as a feather

The use of the Wheelylift involves no effort on your part. This is because of the lifting mechanism which is activated as soon as the wheel is placed onto the hook: the Wheelylift then does its job while you simply look on. This is all possible thanks to the patented moveable momentum construction. For business users: this means that you can hang up bicycles fully in accordance with the applicable health and safety legislation

#### Maintenance-free

The construction of the Wheelylift means that none of the parts are hard to reach. This, together with the simple design, means that the Wheelylift is also easy to keep clean.

#### Sustainable

The Wheelylift lifts cycles without the use of additional (electric) power sources and is therefore a sustainable product. It causes as little harm to the environment as possible. Only sustainable materials are used during the production of the Wheelylift. The entire chain applies low-pollution measures with regard to working conditions, purchasing, logistics, storage and the like.

#### No risk of damage

During the normal use of the Wheelylift, there is no danger of damage to your bicycle.

#### Pivotable

The Wheelylift can be pivoted, which means that you can also store a cycle in a small space (such as a hallway or small shed) easily and efficiently. Using the Wheelylift, it is very easy to rotate a cycle against the wall, which means that your passage is not blocked: your path remains free. As well as being freely pivotable, the Wheelylift can also be fixed in various different positions (see the technical specifications).

#### Specification

Material: steel and rubber

Surface treatment: galvanized and powder coating

Weight: 10 kilos (packing included)

Length of housing: 760 mm

Width of housing: 55 mm

Distance from housing to wall: 50 mm

Freely pivotable: from 0° to 180°

Lifting mechanism drive: avmc and gas spring

Manufacturer's guarantee: 2 years

Minimum spoke spacing at rim: 33 mm

Maximum rim width: 55 mm

**Delivery time:** 5-6 working days
