**Overview of tree work application to Camden Council for Wellside.**

**T1 Lombardy Poplar - Reduce height by 10m, reduce overlong lower laterals to match shape of upper crown, crown thin by 30% and remove deadwood - to reduce the wind loading of the tree and improve light into garden**

**T2 conifer sp - fell and stump grind - poor form, in appropriate location uprights starting to fall apart**

**T3 Acer sp - fell and stump grind - in appropriate location, damage would occur when area re landscaped**

**T5 - Hazel - Coppice - stems have become large, excessively shades garden and would like to use small re-growth in future around garden**

**T6 - Laburnum - Fell and stump grind - poor example of species, low value and conflicts with new boundary**

**T7 - Laburnum - Fell and stump grind - poor example of species, low value and conflicts with new boundary**

**T8 - Bay - Fell and stump grind - in appropriate location, stem damage, is tied to building, excessively shades portion of garden and is likely to cause future damage to building**

**T9 - Thoja sp - Fell and stump grind - in appropriate location, very close to neighbours retaining wall and is likely to cause future problems**

The T numbers relate to the plan provided by Webb architects (1131.01.11(D))

Kind Regards
