Industrial or Commercial Processes and Machinery Please describe the activities and processes which would be carried out on the site and the end products including plant, ventilation or air conditioning. Please include the type of machinery which may be installed on site: The greenhouse will be used to demonstrate a low-cost micro anaerobic digestion system comprising: 1 Kw solar PV array with battery storage 1 Insi a glesset as torage 1 Insi gest storage bladder 1 gas compressor with cylinder storage 1 Insignates storage areas For ventilation, the greenhouse will have opening top vents and one extractor fan with a carbon filter in a side wall. The digester will be fed with approximately 25kgs locally collected food waste daily (on a cargo bicycle). Around 2m3 biogas will be produced daily, which will be used to generate heat to support food growing in 2 nearby polytunnels and a greenhouse by the main in the digester for approximately 40 days after which, it will be collected in a settling tank. Here the liquid and solids will be separated with the liquid stored in an IBC tank, while the solids will added to nearby compost bins for further maturation. Off-the-shelf fully tested equipment will be used to build the system - see planning statement for further details. The polytunnel will be used to expand capacity on site for food growing and digestate utilisation. Is the proposal for a waste management development? Yes No Please complete the following table: The total capacity of the void in cubic metres, including engineering surcharge and making no allowance for cover or restoration material for fooners if solid waste or litres if liquid waste) Anaerobic digestion 1 9.1 Please give maximum annual operational throughput in tonnes (or litres if liquid waste) | | | | | | | | | | | | | |
