* 1m3 digester
* 1m3 IBC for digestate storage
* 1.5m3 gas storage bladder
* gas compressor with cylinder storage
* integrated control and monitoring system
* monitoring worktop and storage areas
For ventilation, the greenhouse will have opening top vents and one extractor fan with a carbon filter in a side wall.
The digester will be fed with approximately 25kgs locally collected food waste daily (on a cargo bicycle). Around 2m3 biogas will be produced daily, which will be used to generate heat to support food growing in 2 nearby polytunnels and a greenhouse.
Digestate will remain in the digester for approximately 40 days after which, it will be collected in a settling tank. Here the liquid and solids will be separated with the liquid stored in an IBC tank, while the solids will added to nearby compost bins for further maturation.
Off-the-shelf fully tested equipment will be used to build the system - see planning statement for further details.
The polytunnel will be used to expand capacity on site for food growing and digestate utilisation.
