Description and Sources**Description**

Ten test pits were planned to be excavated by the Museum of London Archaeology Service, though only nine were in the end. Archaeological survival was limited, due to the depth of existing nineteenth or twentieth century basements, to eighteenth or nineteenth century brick lined drains a cess-pit, plus gravel quarry pits of uncertain date. Test pit 6 in one external area a large post-medieval soil or quarry pit overlay an earlier water channel or soakaway. No finds or features earlier than the eighteenth century were encountered.

Description and Sources

Description

The Museum of London Archaeology service observed the excavation of several geotechnical test pits at The Rolls Estate, former Public Record Office, Chancery Lane. No archaeological deposits survived as they were destroyed by the slabs and foundations of the present building. The standing buildings are Grade II* status. The walls, railings and lamps along the front of the buildings are listed Grade II. The proposed development comprises the conversion and refurbishment of the standing buildings into the library and IT for Kings College, University of London.

Description and Sources

Description

The work in Church Court consisted of an evaluation of a trench for the foundation of a monumental column and four tree pits between the 3rd and the 19th August 1999. Following the discovery of significant archaeological deposits in the column base trench a rescue excavation of this area was conducted between the 3rd and the 29th September 1999. Thereafter, a watching brief was maintained on the enlarging of Trench 5 (tree pit 4) between the 4th and the 8th November 1999. The investigation in Hare Court consisted of the monitoring and archaeological excavation of the construction of five lightwells on the east side of Nos 2-3 and a new drain with two soakaways on an intermittent basis between 15th Nov 1999 and 15th June 2000. This work was carried out by PCA. A small assemblage of residual flints were recovered from site, brown flint of Mesolithic or Early Neolithic and black flint of Late Neolithic or Early Bronze Age date or possible medieval dressed cobbling. Eleventh or twelfth century dumps and a ragstone wall were revealed which may have been part of the construction of the New Temple. The cloister walls were covered in post-medieval demolition layers, into which were inserted five skeletons. An early post-medieval timber framed building was observed in trench 2 and in trench 3 the basement of the Lamb Building which was destroyed in 1941 was found, in the other trenches was a pre-WWII Yorkstone pavement.

Description and Sources

Description

The Museum of London Archaeology Service has carried out a number of different phases of work on the site from 1992 to 2000 and under two site codes HST92 and HSN99. This event refers to an evaluation of three trenches in June 1992. It was carried out as a result of a planning condition imposed at the time of the granting of permission to demolish the existing buildings on the development site. Prior to site clearance, the site had consisted of two main buildings, a large cold store with office space above (2-12 Hosier Lane) and the Globe Public House (1 Hosier Lane). It also contained two undeveloped areas to the east and south-west of the main buildings. The results of the combined fieldwork was presented in a single report. Residual Roman pottery sherds and fragments of human remains were found on site. A large east-west drainage ditch, probably running to the Fleet, was filled with domestic refuse which could be dated between 1150 and 1350. A number of later channels or sumps truncated the backfill of the ditch, dating to the middle of the fourteenth century. To the south of the ditch was a barrel well which was backfilled at the end of the fourteenth century. A possible medieval chalk wall truncated the topmost reclamation deposits over the ditch. Another chalk and brick wall dated to the late fifteenth century but most of the other post-medieval features were truncated by modern activity. Early nineteenth century brick culvert drains survived and may have been associated with a circular brick-lined well. The drains were truncated by a series of Victorian basements and modern dumps.

Address

6-10 Kirby Street and 119-124 Saffron Hill, Camden, London, EC1

Description and Sources

Description

A series of evaluation pits were excavated on the site, in addition, a number of engineering trial pits were also monitored under watching brief conditions. In the northern area of the site post-medieval masonry footings survived, built over water-logged post-medieval dump deposits of mid 17th century date, probably the backfill of a pond or stream. In one evaluation pit, timber piles and a raft of timber had been used to consolidate the ground prior to construction of the footing. A watching brief is recommended to be carried out during any future works.

Description and Sources

Description

Following the recommendations of an archaeological impact assessment two geotechnical pits were enlarged to accommodate an archaeological evaluation of the site. The results of the field evaluation show that although occupation in the general area has been found dating from the Roman period onwards, on this particular site only late activity was observed. This was in the form of 17th to 18th century pitting. Some of this could have been consolidation ground works in advance of the construction of the West Wing in 1774-52. No evidence of Roman burials or the possible Roman cemetery was found.

Description and Sources

Description

An archaeological watching brief was undertaken by Pre-Construct Archaeology on the 10th September 2001 at the garden frontage of Arnold House, City of London. Borehole and starter pits were undertaken in advance of proposed redevelopment.
Due to solid obstructions encountered on the site at a relatively high level four starter pits were dug in order to find an area of soft ground. This proved to be difficult and only one borehole was augered to any depth. Although no archaeology was found the material extracted by the rig indicated that a cellar or basement exists beneath the study area.

Description and Sources

Description

The first phase of an archaeological evaluation was conducted by the Museum of London Archaeology Service in 2001. Ten pits were designed to be sunk, however only two (test pit 1 and 10) were possible to excavated by the time of the report (September 2001). Test pit 1 was truncated to 11.4m OD by a 19th century sewer. Some sandy material recorded in test pit 10 may have been the backfill to Roman quarry pits. The overlying cultivated soil and a pit probably represent fields or gardens of medieval and early post medieval date. A later ditch or pit dated to after 1550. These were sealed by later post medieval make up layers.

Natural at 13.77m OD in test pit 10

Description and Sources

Description

Area excavation was carried out in stages, and a watching brief took place in one area. In all 577 square metres were excavated. The earliest features were early Roman and consisted of stake- and post-holes, two cremations, three inhumations and 75 pits. In the later Roman period (200-410 AD) a total of 8 pits were recorded. Medieval pits sometimes contained residual Saxon pottery. These eleven pits and three linear gullies had been dug through a plough-soil that sealed the Roman activity. At the north and south ends of the site there was a lot of post-medieval activity. At the south end a large, chalk-lined Tudor cess-pit containing two Coarse Borderware jugs, fragments of glass urinals and two Cheam whiteware crucibles was excavated. A seventeenth century pit and an eighteenth century brick-lined cess-pit were also excavated in this area. In the north a brick drain channelled water down the slope and a foundation forming part of the cellar of a house were encountered.

Description and Sources

Description

A number of test-pits and boreholes were monitored, a watching brief took place and excavation was undertaken by the Museum of London Archaeology Service. A stream was shown to have flowed into the Fleet and not the Thames, as previously thought. An Early Roman road and roadside ditch were found. Also fragmented remains of clay and timber buildings. The remains of a substantial masonry foundation 6m square was also found possibly part of a monumental arch, tower or mausoleum. All of the above were found to the west and north of the Western Stream. To the south of the Western Stream Late Roman foundations of a masonry building were found. Fragmented remains of medieval chalk foundations, probably out-buildings of Warwick Inn were encountered. very fragmented brick foundations and drains dating to the post-medieval period were found. Nothing earlier than Roman was encountered.

Description and Sources

Description

Watching brief in 1988 by Department of Greater London Archaeology (North) of a trench across an embankment at the north boundary wall of Lincoln's Inn Fields. Beneath the garden soil, building rubble overlying brick footings was found. Three clay pipe bowls were found suggesting that the demolition occurred in the late 17th century. Beneath the modern debris in a second trench, redeposited brickearth was found, from which sherds of medieval pottery were recovered.

Description and Sources

Description

Four geotechnical pits and two associated boreholes were excavated in the basement areas of the site and were monitored by the Museum of London Archaeology Service. The basement seems to have removed any archaeological deposits that may have been present.

Description and Sources**Description**

Four test pits were excavated in December 2000 and two previously by the Museum of London Archaeology Service. the lower portions of two medieval pits were found, containing chalk, shell, charcoal and animal bone. they probably predated construction of the present Middle Temple Hall between 1562 and 1573. Remains of later additions and modifications to these kitchens and other service buildings included brick wall footings and a brick-lined drain under a previous stone floor in the main kitchen, ad a substantial largely sterile deposit levelling up the ground to the south to form a garden. No finds or features earlier than medieval in date were encountered.

Description and Sources

Description

The watching brief involved monitoring and recording three geotechnical test pits excavated against the foundations of the existing building. No archaeological deposits were recorded and it was concluded that the existing basement has truncated all archaeological material on the site.

Description and Sources

Description

An archaeological evaluation was carried out in 1993 at Mount Pleasant Post Office by the Museum of London Archaeology Service, prior to redevelopment of the site. The earliest sequence was natural London clay deposition. Over the eastern side of the site, the whole area was heavily truncated by the later Post Office buildings. Further west the area sloped down westwards into a valley, originally part of the River Fleet valley system, above which a large alluvial silt deposition was observed. A series of dumps were found along the eastern banks of the river and later across the river valley. The probable foundations of the Middlesex House of Correction prison building were observed cut into the river dumps along the southern side of area A.

* Natural London Clay was observed at a level of 9.06m OD and 13.36m OD. *

Description and Sources

Description

An archaeological evaluation was conducted in 1992 by the Museum of London Archaeology Service. Site code PCC92.

The earliest deposits were possible quarry pits with fills dating to the mid 12th to mid 14th centuries. Two medieval walls aligned parallel to the nearby precinct wall of the London Charterhouse were built into these. It was thought that these walls belonged to previously unknown outbuildings located outside the precinct wall. The east of the area appeared to have been open ground, and a ragstone and timber-lined feature possibly identified as a drain was recorded. This dated to the 16th century and may have been contemporary with Wash House Court which was added to accommodate the lay brothers' quarters.

Deposits and features related to the post Dissolution use of the site were also recorded. These included two brick buildings constructed against the earlier precinct wall at the west of the site, one of which was dated to the late 17th century. To the east of the site a probable 17th century gravel surface was also recorded.

Description and Sources

Description

A watching brief was maintained by the Museum of London Archaeology Service during the creation of trenches within a standing building, from September 1997 to January 1998. Evidence was seen of wattle-lined pits and chalk cess pits.

Natural gravel was observed between 3.50 and 4.10m OD.

[Details from a nearby desk based assessment].

Address

96-100 Clerkenwell Road, Islington, London, EC1

Description and Sources

Description

An archaeological evaluation was carried out in 1996 by the Museum of London Archaeology Service. Site code TCR96.

Four test pits were excavated in the existing petrol station forecourt and a car park to the rear.

Test pits 2 and 4, which lie within the north west zone of the inner precinct of the medieval priory of St John appear to have been an open area of dumping and pitting in the early medieval period. By the late medieval period a building or structure, possibly the Plommer house, had been constructed in the area. This building appears to have been demolished, at the earliest, during the late 17th century.

Test pit 3 fell in an area of early medieval quarry. Late medieval domestic rubbish pits were also found, possibly within the area of the Little Court.

natural sand and gravel found between 14.27m and 15.23m OD

Description and Sources

Description

Watching brief on test pits for redevelopment of the site. London Clay was overlaid by alluvial clays and sands, sealed by a peat horizon dated to the Neolithic period. Above this were foreshore deposits that contained Roman and Saxon material, including a Saxon bronze alloy strap end.
