<b>Summary</b>	
<b>Description</b>	Evaluation and watching brief by C. Bell for OAU, May 1994; site code ESS 94. 35 Essex Street is a listed post-medieval building (see 204578), within the area of the Temple complex founded by the Knights Templar in the C12. Excavation of lift shaft revealed various drains of apparent medieval date, including a substantial stone lined drain with a base made from re-used ceramic tiles. A sequence of cobbled and compacted chalk surfaces were found to be associated with the drains. Periods recorded under same site code: medieval (082676); unknown (082677); post-med (082678).

<b>Summary</b>	
<b>Description</b>	Evaluation and watching brief by C. Bell for OAU, May 1994; site code ESS94. 35 Essex Street is a listed post-medieval building (see 204578), within the area of the Temple complex founded by the Knights Templar in the C12. Watching brief over excavation of pile trenches, manholes etc., revealed only post-medieval dumps. The absence of archaeological levels over the rest of the site when compared with the lift-shaft excavation was noted. It was suggested (in a letter, not the summary report), that this may be because the shaft lay within a feature such as a garderobe pit on the downhill side of the building, and that the ground was made up around it much later when the present buildings were built. It was also suggested that documentary research may throw some light on this. Periods recorded under same site code: medieval (082675-6); unknown (082677); post-med (this entry).

<b>Summary Description</b>	THERE IS DOCUMENTARY EVIDENCE OF THE "NUNS HALL" SURVIVING INTO THE 19th century AS A WORKSHOP & PART OF A HOUSE. IT APPEARS TO HAVE ABBUTED ONTO THE NORTH CORNER OF THE CLOISTER, THOUGHT TO BE EITHER AN INFIRMARY OR A LATRINE DUE TO ITS LARGE WALLS & DIRECT SUPPLY OF WATER STRAIGHT FROM THE NUNS' CONDUIT. EXCAVATION BY ILAU 1981 AT 7-8 NEWCASTLE ROW FOUND C12-13TH REMAINS & AN UNDERCROFT THAT WAS INSERTED IN THE C15TH (SITE CODE NEW81). FURTHER EXCAVATIONS IN 1987 (SITE CODES NEW87). MORE FOUNDATIONS, OF A C12 TIMBER BUILDING AND A LATER C12 MASONRY BUILDING WITH AN ASSOCIATED YARD SURFACE, WERE FOUND AT 36-41 CLERKENWELL CLOSE / SCOTSWOOD STREET (SITE CODE SCT87). THE LATTER EXCAVATION ALSO RECORDED FURTHER CHALK STRUCTURES BUILT IN THIS YARD, PROBABLY DEMOLISHED AT THE DISSOLUTION IN 1538.

<b>Summary Description</b>	A number of test-pits and boreholes were monitored, a watching brief took place and excavation was undertaken by the Museum of London Archaeology Service. The Western stream channel was found cutting through the brickearth and gravels. Where observed the channel had steep sides and the base was found at approximately 7m OD. It was found to enter the site at the northeast corner but instead of turning to the south east as predicted turned to the southwest. Contrary to expectations it would therefore have originally flowed into the River Fleet and not into the Thames. During the early Roman period it seems that material was being dumped into the stream, probably in an attempt to reclaim land. Evidence of the diversion of the channel is seen in the later Roman period. Further attempts at management of the stream lasted until the modern day.

<b>Summary Description</b>	Within the early Roman period a Roman road and roadside ditch were found. Fragmented remains of clay and timber buildings were discovered along with the substantial masonry foundation of a possible monumental arch, tower or a mausoleum. These were all found to the west and north of the Western stream. The evidence for the clay and timber buildings consisted of compacted brickearth surfaces, stakeholes, postholes and beam slots.

<b>Summary</b>	
<b>Description</b>	To the south fo the stream during this period , A Roman masonry building was constructed out of randomly coursed chalk blocks with a single tile course above and the remnants of a ragstone superstructure above the tiles. This was dated to between AD 140 -250. Dark soils were also seen in the later period AD 325-400.

<b>Summary</b>	
<b>Description</b>	After abandonment in the Post-Roman period the stream became infilled quite substantially. A deep deposit of organic silt was found to the east and the remains of a possible plank and post-timber revetment were found, demonstrating an attempt to manage the feature.

<b>Summary</b>	
<b>Description</b>	The fragmented remains of chalk foundations were excavated some of which appear to be the bases of relieving arches. No superstructures or floors were found in association yet their method of construction suggests a medieval date, possibly outbuildings associated with the Warwick Inn.

<b>Summary</b>	
<b>Description</b>	Evaluation undertaken by Adrian Miles for Museum of London Archaeology Service, June'97; site code BVS97. A series of pit segments were recorded, which produced a small amount of medieval pottery dated from the late C12th to C13th. This probably represents quarrying for materials for the construction of the Carmelite Friary. No further periods recorded under this site code.

<b>Description</b>	EXC BY IAHS 1976 FOUND INTACT FLOORS, WALLS & THE REMAINS OF FISH, FOWL & EGGS. EXC BY Department of Greater London Archaeology 1984 FOUND BOTH FLOORS & HEARTHES OF THE KITCHEN, WHICH HAD APPARENTLY BEEN REPAIRED SEVERAL TIMES & REPLACED AT LEAST ONCE. EXC 1987 FOUND THAT THE WALLS HAD BEEN DESTROYED BY LATER INTRUSIONS, BUT THE FLOORS, OCCUPATION DEBRIS & HEARTHES SURVIVED WITH LARGE QUANTITIES OF FISH BONES & FOOD WASTE.

Type/Grade	Reference/Title	Description
Scheduled Monument	LO130 Benedictine Nunnery Of St Mary, Clerkenwell	<p>** FOR INTERNAL EH USE ONLY ** 02/APR/1974 Vacant area to the N of St. James', Clerkenwell, with car park in NE corner. Cloister and conventual buildings revealed by laying of services; portion of E end of church also discovered. Site (maximum length and width c.100m) is to become public open space. Monument also comprises area immediately S of the church: St. James's Gardens, site of the nunnery church (twice as large as the present St. James's Church). Part of N wall of nave (also forming S wall of cloister) has been exposed, and is in the process of consolidation prior to display to the public.{1}</p> <p>17/JUL/1993 The priory or St. Mary, a Nunnery of Augustinian Canonesses, was founded by Jordan de Briset on 14 acres of land adjacent to the Clerk's Well in 1154. The Priory Church occupied the site of the present Parish Church of St. James. The Priory was suppressed in 1539, but the church survived until 1788.{5} Six large-scale excavations and seven or eight watching briefs have taken place in the Priory precincts, and Barney Sloane of MoLAS is proposing a further assessment and analysis of their data collections. In summary, findings to date include: Iron Age feature ?ditch terminus; agricultural activity pre-dating foundation; first cloisters to N of church 12th century-13; ?infirmary; kitchen range; 22m stone building extending E range; metallated inner court; lead conduit c.1250; post-medieval development including brickhouse on E range.{7}</p>

<b>Summary Description</b>	Watching brief undertaken by Niall Roycroft for Museum of London Archaeology Service, January - March 1998; site code BTM98. At least three human inhumations were recorded within the foundations of the Chapter House of St Bartholomew the Great (SMR ref. 085094) the partial remains of which are still in-situ beneath the present slab. More can be expected to survive. To the N of the Chapter House, an early cemetery was examined which yielded the remains of three burials. Periods recorded under this site code: Roman (085093), medieval (085094-8), post-medieval (085099-100).

<b>Summary Description</b>	Watching brief undertaken by Niall Roycroft for Museum of London Archaeology Service, January - March 1998; site code BTM98. The N part of the site was occupied by the Priors' Lodging from 1520 to the end of the 18th century. Limited remains of the foundations survived but with the help of documentary evidence there was enough information to compile a good plan. Some foundations of buildings which partially occupied the area between the Priors' Lodging and the NE end of the Chapter House during the 16th century were found. Periods recorded under this site code: Roman (085093), medieval (085094-8), post-medieval (085099-100).

<b>Summary Description</b>	Watching brief undertaken by D Bentley for the Department of Urban Archaeology, June'86; site code CFA86. A watching brief was undertaken during the refurbishment of a pair of late 18th century houses. The internal timber structure, supported by an outer brick wall showed no evidence for reuse of materials and no trace of decorative features in situ. Finely chamfered limestone fragments were observed in one basement fireplace which must have come from a grander structure as must an unusually decorated block of Caen stone retrieved from the basement floor make-up and attributed on stylistic grounds to the 17th century. No further periods recorded under this site code.

<b>Summary Description</b>	Extensive brickearth quarry pits were found across the site backfilled with refuse to a depth of 1.2m. Archaeological pit 4 was located in the north wall of the building and produced a few fragments of clay tobacco pipe indicating it had been reworked sometime after the middle of the 17th century. Geotechnical pit 1 had the same layer below the modern slab as the other pits, a grey ash and silt deposit, yet yielded the remains of a Fine Kingston ware baluster jug (1320-1400). This dated the earliest use of the pits.

<b>Summary Description</b>	The watching brief carried out monitored the excavation of a new lift pit area a new manhole area, an area for mass concrete foundations and drains runs. Below all of these were found dumps of brown clay silt and sandy clay silt, containing varying amounts of oyster shell, charcoal and mortar fragments. No dateable material was recovered. The deposits reached from 16.10m OD to 15m OD.

<b>Name</b>	45-50 HOLBORN VIADUCT EC2
<b>Map Sheet</b>	TQ38SW
<b>Grid References</b>	Centre Point: Centroid TQ 3153 8159 (MBR: 10m by 10m)
<b>Summary</b>	
<b>Description</b>	Watching brief undertaken by L. Dunwoodie for Museum of London Archaeology Service, Nov'97; site code ATC97. Possible cellar or pit fills of possible post-medieval date were observed in all three trenches, although observations of archaeological deposits were limited; generally only the upper-most deposits were exposed. Periods recorded under this site code: post-medieval?/undated (044910-1).
