Summary	
Description	Observation of trial pit in the unbasemented part of the site by Department of Greater London Archaeology in 1986 revealed two layers of clay which had been waterlogged at some time. These were packed with medieval building debris, and appeared to have filled an old watercourse, pond or gravel pit. No Roman levels survived.

Grid References	Centre Point: Centroid TQ 31316 82026 (MBR: 1m by 1m) (Centred on)
Summary	
Description	The test pits revealed between 1.5m and 2.7m depth of Victorian and modern brick rubble backfill, which is the ground make-up for the existing concrete slab of both the forecourt and the present building on the site. The area was bombed during Second World War and this may be evidence that buildings on the site were damaged or destroyed and then simply built over.

Summary	
Description	Watching brief undertaken by I Grainger for Museum of London Archaeology Service, Nov-Dec'95; site code AYB95. In the 16th century and 17th century, new brick buildings were constructed on the site. Finds from this period include a Charles I 'Rose' farthing. These buildings were demolished in the 19th century. Periods recorded under same site code: medieval (083494-5), post-medieval (083496-7)

Summary	Medieval remains consisted of numerous pits and wells found in three discrete areas, no doubt originally located in the backyards of buildings fronting Smithfield Street and Hosier Lane
Description	Excavation carried out the Museum of London Archaeology Service between 1999 - 2002. Medieval remains consisted of numerous pits and wells found in three discrete areas, no doubt originally located in the backyards of buildings fronting Smithfield Street and Hosier Lane. Some of the earliest features were almost certainly quarry pits, for the extraction of sand and gravel. Based on the pottery evidence, two main groups of pits can be identified, one group dating to the late 13th and early 14th centuries, and a slightly larger group of late 14th century date. Pits of both groups were located in each of the three excavation areas, with no distinction in terms of the pattern of distribution between them. This suggests that the area was first laid out and occupied in the late 13th or early 14th century, with major property boundaries subsequently maintained throughout the medieval period. In addition, a small number of 15th and 16th century pits were located, though others may have been truncated by later development on the site. (1)

Summary Description	Excavation carried out by Barry Watson, et. al. for Museum of London Archaeology Service Post-medieval remains dating to before the late 19th century redevelopment of the site were less well represented, largely consisting of below ground brick structures such as wells and drains. A number of brick features, mainly drains and wall foundations, are dated to the 18th and early 19th centuries. A series of brick drains of early 19th century date were located across the southern part of the site. The site was redeveloped in the late 19th century. Buildings on the site were destroyed in the Blitz and the site left open until the present development.

Summary Description	Excavation and watching brief undertaken by Kieron Heard for Museum of London Archaeology Service, September - December 1999; site code SAJ98. A number of buildings with masonry foundations were constructed in the E part of the site in the early post-medieval period. One of the buildings was cellared and is thought to have been a high-status tenement built when the outer court of St John's Priory was sub-divided and leased to wealthy tenants. One of the buildings was modified in the 16th century by the addition of a brick-built cellar. In the 16th century a new building with brick foundations was constructed in the centre of the site fronting onto Pissing Alley (SMR ref. 084915). It was fitted with fireplace mouldings that were probably salvaged from the Priory of St John. The building was subsequently modified by the addition of a cellar and was further modified and extended in succeeding centuries. It was demolished at the end of the 19th century. In the 17th century and 18th century, the medieval buildings in the E part of the site were replaced by a terrace of brick buildings with cellars fronting on St John St. Periods recorded under this site code: medieval (084913-5), post-medieval (084916-7).

Summary Description	Fourteen testpits were recorded by the Museum of London Archaeology Service. The earliest archaeological deposit was a leached soil horizon dated provisionally to the thirteenth century, into which a curvi-linear enclosure ditch was dug. the enclosure was sealed by a worked soil horizon dated to the fourteenth century. A medieval ditch oriented SW-NE that bisected the site is interpreted as a boundary marker or drainage channel associated with the 'little lane' that is referred to in late medieval documents describing the holdings of the priory. This lane was known subsequently as Pissing Alley. A number of buildings with masonry foundations were constructed in the east part of the site in the early post-medieval period. One of the buildings was cellared , and another was supplied with a chalk-lined cesspit. One of these buildings was modified in the sixteenth century by the addition of a brick-built cellar. In the sixteenth century a new building with brick foundations was constructed in the centre of the site. It was fitted with fireplace muoldings that were probably salvaged from the priory of St John. The building was subsequently modified by the addition of a cellar and was further modified over the centuries until its destruction in the nineteenth century. In the seventeenth and eighteenth centuries the medieval buildings in the east part of the site were replaced by a terrace of brick buildings with cellars, fronting onto St John Street.

Summary Description	Evaluation by G, Malcolm, Feb. 1993 and watching brief by I. Grainger, July 1993 for Museum of London Archaeology Service; site code GGH93. Natural gravel, sealed by modern rubble make-up, was recorded in test pits. The watching brief revealed natural gravels cut by large pits or trenches which contained modern rubble; they may have been robbed foundation trenches or modern pits. No further periods recorded under same site code.

Summary	
Description	Watching brief undertaken by Elizabeth Howe and Robert Cowie for Museum of London Archaeology Service, July 1997 - February 1998; site code JEP97. Quarry pits were cut into the natural gravels. No dating evidence was present but these are likely to have been earlier than C12th. These quarry pits were observed in underpinning holes. Periods recorded under this site code: undated (084989) post-medieval (084990-1).

Summary Description	Watching brief undertaken by Elizabeth Howe and Robert Cowie for Museum of London Archaeology Service, July 1997 - February 1998; site code JEP97. A chalk structure which had been demolished prior to the construction of 16th century buildings may have been of late C15th - 16th century date. The foundations of three buildings recorded in the basement may have been matched to documentary sources. The foundations formed part of three buildings to the N and W of the Great Hall of the mansion of Sir Edmund Tilney. The foundations indicate that one of the buildings was at least 9m wide. A second building was separated by a passage and represented by a series of chalk and ragstone foundations later rebuilt in brick. Periods recorded under this site code: undated (084989) post-medieval (084990-1).

Summary	
Description	Watching brief undertaken by Elizabeth Howe and Robert Cowie for Museum of London Archaeology Service, July 1997 - February 1998; site code JEP97. A red brick-built cesspit extended 0.2m below the present basement floor. Another late 17th century-18th century cesspit or well was recorded and consisted of a circular chamber connected to a drain. Several additional post-medieval brick structures (probably cess pits) were recorded. Periods recorded under this site code: undated (084989) post-medieval (084990-1).

Summary**Description**

Evaluation undertaken by Ken Pitt for Museum of London Archaeology Service, Nov-Dec'96; site code TCR96. Early medieval pits were recorded in an area thought to lie within the NW zone of the precinct of the medieval priory of St John. Late medieval domestic rubbish pits were also found. Periods recorded under this site code: medieval (083743-5), post-medieval (083746).

**Summary
Description**

Cut features dated to the Roman period were found through excavation by the Museum of London Archaeology Service, April-July 1994; site code ABP 94 (following earlier excavations on part of the site under site code JAN 90). These features cut the natural gravel. A possible field boundary or drainage ditch was found in the northern part of the site, oriented northeast-southwest. It was in close proximity to two other ditch fragments, both heavily truncated. A number of irregular linear cuts of uncertain function were found to the east. The ditches may have been agricultural trenches. These features were cut by a number of quarry pits. To the south was a narrow north-south aligned trench or gully, cut by a large quarry. The features were interpreted as evidence of exploitation of the land for a variety of purposes including agriculture and gravel extraction. The ditches may have been part of the field system of a settlement or single farm. The concentration of finds and features in the north of the site suggests the presence of a settlement in this area..

Map Sheet	TQ38SW
Grid References	Centre Point: Centroid TQ 3169 8195 (MBR: 10m by 10m)
Summary Description	Four 18th century tenements were recorded during excavation by Department of Greater London Archaeology in 1990 (site code JAN90). A number of 18th century Delft tiles were recovered. Excavations by I Grainger for the Museum Of London Archaeology Service, April-July 1994 (site code ABP94) found more of the tenements that replaced Berkeley House. One contained a deliberate, possibly ritual, burial of a pottery jar alongside the foundations.

Summary	A medieval quarry was found through excavation at the site of 140 Aldersgate Street by the Museum of London Archaeology Service in 2002.
Description	A medieval quarry was found through excavation at the site of 140 Aldersgate Street by the Museum of London Archaeology Service in 2002. A single CBW (Coarse Border Ware) rimsherd was recovered from the section through a gravel quarry pit. The quarry pit was backfilled with domestic rubbish, including: nightsoil and oyster, mussel and cockle shells. * Natural gravel was observed at 15m OD. *

Summary Description	SIR WILLIAM DRURY BUILT HIS HOUSE ON THIS LAND, THAT HAD PREVIOUSLY BELONGED TO ST GILES HOSPITAL BETWEEN 1544 AND 1562. BY 1562 THE MANSION COMPRISED A CLUSTER OF BUILDINGS SURROUNDED BY WOODED GROUNDS WITH A HIGH FENCE. IT LATER CAME TO BE KNOWN AS CRAVEN HOUSE, WHEN REBUILT IN 1644 BY LORD CRAVEN AS A FOUR STOREY BRICK BUILDING WITH ENGAGED PILASTERS. BY 1682 THE W PART OF THE SITE, PREVIOUSLY SHOWN AS OPEN GARDENS, HAD BEEN DEVELOPED WITH THE ERECTION OF HOUSES. LATER, IT BECAME THE QUEEN OF BAVARIA PUBLIC HOUSE. IN 1805, ASPLEYS OLYMPIC PAVILION OPENED ON THE SITE.

Map Sheet	TQ38SW
Grid References	Centre Point: Centroid TQ 3167 8105 (MBR: 10m by 10m)
Summary	
Description	Site believed to have been occupied by a tower attached to the later medieval extension of the City wall. This was evidently at the point at which the wall was later breached in 1522 and a gallery built across the Fleet connecting Bridewell palace with Blackfriars Priory (see linked records). This in turn became the Bridewell Bridge erected in 1550-2. Excavation by W McCann for the Department of Urban Archaeology (1988-90, site code VAL88) failed to reveal any trace of the structure.

Summary Description	A watching brief to log the contents of seventeen machine excavated geotechnical pits and to monitor ground reductions across the development were carried out by the Museum of London Archaeology Service. Almost all archaeological deposits had been truncated during the twentieth century across most of the site, but there were pockets of in situ archaeology surviving beneath site wide dump of rubble demolition debris. The fragmentary deposits were immediately above the gravel and probably represent the remains of external dumps or truncated pit fills of medieval and post-medieval date. The only datable finds were four sherds of sixteenth century and fourteenth century pottery. the outline of a north-south medieval chalk foundation was seen on the north side of the site.

Summary	
Description	A short length of a late post-medieval culverted brick drain was also seen. No finds or features dated earlier than the medieval period were encountered. The drain was fairly substantial running NW/SE measuring 0.70m internally. The size indicates it was built as part of a well planned water management scheme . One sherd of 16th century pottery was all that was recovered.

Summary Description	Evaluation undertaken by Dan Swift and Sadie Watson for Museum of London Archaeology Service, January 1999 (geotechnical work) and September 1999 (archaeological evaluation); sitecode: SOL99. All archaeological deposits were thought to be post-medieval in date. Dumped material in one of the trial pits included brick and tile in a sandy matrix, overlain by a thin layer of dumped organic material. In another pit, a deposit of cessy material was recorded. No further periods were recorded under this site code.

Summary Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, May-June 1999; site code KGY99. Three shallow gullies were recorded cutting the natural gravel, two aligned E-W and one N-S. A fragmentary but semi-complete vessel was found crushed into the base of one gully. This was a sand tempered bead-rimmed jar dated c.AD 50-80 which suggests that this phase of activity dates to the earliest period of the Roman occupation. An E-W ditch at the S end of the area investigated represents a slightly later phase of activity. A coin recovered from its primary silting has been provisionally dated to the reign of Hadrian (AD 117-138). Roman brick recovered from the backfill indicates that it was infilled c.AD 140-200. A possible change in land-use is indicated by the recutting of this ditch on a similar alignment associated with the construction of a compacted gravel surface (SMR ref. 084941). Periods recorded under this site code: palaeolithic (084939), Roman (084940-1), medieval (084942), post-medieval (084943-5). See also SMR refs. 084616-22 for results of the January 1999 watching brief.

Summary	
Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, May-June 1999; site code KGY99. A compacted gravel surface up to 1.6m thick was recorded associated with the recutting of an E-W Roman ditch. Neither feature could be closely dated, but stratigraphically they must post-date AD 140. In plan the gravel surface appeared linear, oriented E-W and 7.6m wide. As such, it possibly represents a track parallel to Watling St, although this must remain uncertain given the limited extent of survival and it may equally represent a yard or other external surface associated with a settlement or other roadside activity. Residual Roman building material was found in medieval and post-medieval contexts, suggesting some form of activity in the vicinity of the site in the Roman period. . Periods recorded under this site code: palaeolithic (084939), Roman (084940-1), medieval (084942), post-medieval (084943-5). See also SMR refs. 084616-22 for results of the January 1999 watching brief.

Summary Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, January 1999; site code KGY99. Soil deposits which formed over a peri-glacial stream channel (SMR ref: 084616) were reworked (perhaps by ploughing) in the late medieval period. Small abraded sherds of pottery and roofing tile were recovered from this deposit, whilst a few earlier medieval sherds (dating to the C11th and C12th) occurred as residual finds in later deposits. In June 1999 a further watching brief uncovered more soil deposits up to 0.5m thick sealing earlier gravel deposits and Roman features (084942). Periods recorded under this site code: prehistoric (084616), Roman (084617), medieval (084618), post-medieval (084619-22).

Summary Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, May-June 1999; site code KGY99. Towards the S extent of the excavated area, Roman features (SMR ref. 084940-1) were sealed by a deposit of gravel and sandy silt which may represent hill wash - redeposition of eroded material from further N - or possibly the fills of a tentatively defined cut. The only dating evidence from these layers were a few sherds of pottery dated to 1080-1200. Periods recorded under this site code: palaeolithic (084939), Roman (084940-1), medieval (084942), post-medieval (084943-5).

Summary Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, May-June 1999; site code KGY99. The earliest evidence for a change of land-use during the post-medieval period is a sequence of dumped deposits dating from 1612-1650. These may have been residue from industrial processes or dumps of refuse. Possibly they represent waste dumps in the yards or gardens of nearby properties fronting Holborn, Newton Street and the former Little Queen Street, although they may have been imported dumps of material preparing the ground for development. The cartographic sources suggest that the basic street layout and the first housing development in the area date from the 1630s-1650s. Periods recorded under this site code: palaeolithic (084939), Roman (084940-1), medieval (084942), post-medieval (084943-5).

Summary Description	Watching brief undertaken by Bruno Barber for Museum of London Archaeology Service, May-June 1999; site code KGY99. A barrel-vaulted brick sewer cut into post-medieval dumps (SMR ref. 084943). It was a substantial structure, 0.98m tall and 0.50m wide internally and was probably an integral part of the mid-17th century development of the area. Built over the sewer and contemporary to it was a fragmentary brick footing. It represents one wall of a brick building, tentatively identified as one shown on Morgan's map of 1681-2, a small structure in the yards behind properties fronting onto Little Queen Street and Newton Street. Its position over the sewer may indicate a privy. Of uncertain date, but again built of similar materials, a short length of brick footing incorporated into the existing W site boundary wall may be part of another 17th century building. Periods recorded under this site code: palaeolithic (084939), Roman (084940-1), medieval (084942), post-medieval (084943-5).

Grid References	Centre Point: Centroid TQ 3126 8151 (MBR: 10m by 10m)
Summary Description	Excavation undertaken by NJ Elsdon for the Department of Urban Archaeology, March-June'88; site code BAA87. A portion of a chalk-walled building was found, and through comparison with surviving sections to the N in the basement of Barnard's Inn (early C15th) was assumed to be part of the same structure; a medieval hall. A few large and small postholes represented internal features. Periods recorded under same site code: Roman (043731-5), medieval (043736-9), post-medieval (043740)

Summary Description

PROVISION FOR A CHARTERHOUSE WATER SUPPLY WAS MADE IN 1430. JOHN FERIBY & HIS WIFE MARGERY GRANTED CHARTERHOUSE A SPRING & A PORTION OF LAND TO MAKE A CONDUIT ACROSS THE LAND, UNDER THE ROAD & INTO THE MONASTERY THE SPRINGS WERE SITUATED AT OVERMEAD. FROM THE HIGHWAY, THE CONDUIT PASSED (BY ARRANGEMENT) THROUGH LAND BELONGING TO ST JOHNS PRIORY & ST MARYS. THE PLAN OF THE CONDUIT WAS SHOWN IN DETAIL ON THE WATERWORKS ROLL, WHICH ALSO HAD WRITTEN NOTATIONS. IT ALSO SHOWED PART OF THE LINE OF THE ST MARY & ST JOHN CONDUITS. IT BEGAN AT THE WELLS, CONNECTED TO THE FIRST "RECEYT" BY A GUTTER OF STONE & THEN CONTINUED IN LEAD PIPES. DUE TO THE FACT THAT ST MARYS & ST JOHNS HAD ALREDY USED THE CLOSER SPRINGS, CHARTERHOUSE HAD TO GO FUTHER NORTH FOR ITS WATER. AFTER USE IN THE PRIORY, THE WATER TRAVELLED OUT TO BE USED BY TAVERNSBEYOND THE GATE.
