London Telecom Tower Microwave Radio System ICNIRP Statement		

International Commission on Non-Ionising Radiation Protection (ICNIRP) Statement

Cielo's microwave frequency radio transmitting equipment conform's to the International Telecommunications Union safety recommendation EN60215.

The microwave radio installation to be deployed by WCW on the London Telecom Tower complies with standard safety guidelines, which will include RF hazard warning signs being posted on the entry to the compound, and the equipment radiating in a direction away from any other telecommunications site which personnel would be working on. All personnel who work on towers should be RF-aware workers and the ICNIRP occupational standard is applied.

The Harlequin Group, on behalf of WCW, certifies that the installation is designed so that its operation on site, by virtue of its elevated location will not result in RF power densities for public area's exceeding the requirements of the Radio Frequency (RF) public exposure guidelines of the International Commission on Non –Ionising Radiation Protection (ICNIRP) as expressed in the EU Council Recommendation of 12<sup>th</sup> July 1999 “on the limitation of exposure of the general public to electromagnetic fields (0 Hz to 300GHz).
