

2.2 General Arrangement

Constructed from high impact PVC-U the mainframe is 70mm deep (front to back) and has a visible sightline of 53mm.

- Hinging** All vents are hinged to open outwards, as either top hung vents or side hung vents, with all glazing secured by internally fitted beads.
- Joints** All frame and sash sections are mitred and welded at the joints. On White Knight and Dual products the excess residue from the welding process is removed to leave a feature groove finish. On fully foiled products the residue both internally and externally is removed by knifing.
- Reinforcement** Galvanised steel reinforcement is only fitted to White Knight product when required in accordance with Anglian's specification standards. Dark foiled products are always fully reinforced.
