

Please find below information regarding the Outside Branding boards

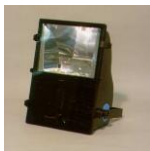

The outside branding will be built as a wooden batten frame with a vinyl PVC graphic wrap.

With regards to the fixings: - The branding flats will be supported from above. The roof area will have a low weighted base and scaffold tube structure/frame self-supported, in which the branding and lights will be attached.

The lights will roughly be positioned no further in the street than the CCTV Camera.

This frame will cause no Structural or cosmetic damage to the building.

The Flood lights used will be 150watts and the luminance levels will be 2.430cd/m. the flood lights are a static fixture and will be secured using industry/event standard clamps. Please see below the type of light being used.

150 watt Flood light
