Re: 191a Goldhurst Terrace

With reference to your enquiry regarding removal of paint from the rear exterior of the above property.

Our Company, Beam Clean & Restore Limited specialise in the removal of paint, varnish, graffiti, dirt, smoke damage and much more from oak, wooden and timber beams, brickwork externally and internally and many other areas.

We operate using a micro stripping machine at extremely low pressures, it can be used with a wet or dry system. The machine is specifically designed to work with the finest abrasives.

We use a chemical free and eco friendly media, a fine powder substance similar to bicarbonate of soda.

Using a blast pressure of between 0.2 and 8 bar we are able to have precise control of the areas that require cleaning.

The media, called Archifine, is a fine hard abrasive specially formulated for architectural cleaning and restoration. The angular grains produce a soft scraping action rather than a hammering action produced by the rounded grains of other medias. Archifine is particularly good at removing paint from red brick, stone and timber and many other areas in addition to those mentioned.

The machine is compliant with the European Pressure Equipment Directive 97/23/EC, also known as the PED.

Our website www.beamcleanrestore.co.uk has more information and videos for reference.

Please feel free to contact us directly for any further information you may require.

Kind Regards
