

## 8.0 Elevational Detail Body

### 8. 12

The form and articulation of the building envelope responds to environmental considerations.

### 8. 13

The vertical orientation of deep set, tall narrow windows on the east and west elevations shade the glazing against the low sun angles on these façades.

### 8. 14

By contrast, the southern elevation has a horizontal orientation of projecting transoms that assists in solar shading to glazing on this elevation.
