

**NOTE:**  
 This survey is of a preliminary nature. The trees were inspected from the ground only on the basis of the Visual Tree Assessment method. No samples were taken for analysis. No decay detection equipment was employed. The survey does not cover the arrangements that may be required in connection with the laying or removal of underground services.  
 Branch spread in metres is taken at the four cardinal points to derive an accurate representation of the crown.  
 Root Protection Areas (RPA) are derived from stem diameter measured at 1.5 m above adjacent ground level (taken on sloping ground on the upslope side of the tree base) or immediately above the root flare for multi-stemmed trees.

 Drawing Title: Arboricultural Impact Assessment (Lower Ground Floor) Rev A, May 2010

**Key:**

- Category A High Quality (Green circle)
- Category B Moderate Quality (Blue circle)
- Category C Low Quality (Grey circle)
- Category R Poor Quality (Red circle)

Diagram illustrating tree components:  
 - Crown Spread (outer green line)  
 - Tree Number (number in the center)  
 - Species (text next to the number)  
 - Category (text next to the number)  
 - Root Protection Area (inner green line)

Tree Position Approximate (not shown on original survey) (Green hatched area)
