The aim of this Strategy document is to identify key site conditions which inform and shape the lighting approach. The document will be supplemented by a Lighting Specification, which will be submitted as the designs are developed further.

The design parameters, such as lighting levels and physical integration of luminaires, as identified in this document, as these will provide the technical basis on which lighting is developed. These elements formulate a set of design principles, which are then integrated into a series of illumination methods towards the implementation of a lighting scheme.
