

3.2 Pedestrian Circulation

As discussed in Section 1.3 docking station sites have been selected where there is sufficient footway or carriageway width not to cause an obstruction to pedestrians or vehicles.

Docking stations on carriageway sites will be located against the kerb. Sufficient space has been provided on these sites to enable users to circulate around the terminal and docking points without having to step out onto the carriageway.

Docking stations on the footway will either be located within the street furniture zone (see Figure 3.2), or at the back of the footway. A minimum of 2.0 metres of clear footway will be retained to ensure that the docking station does not impede pedestrian movements.

Figure 3.2: Street Furniture Zone

The docking station is designed to maximise pedestrian circulation within and around the docking points and terminal. There will be a gap between individual docking points to allow ease of bicycle docking and undocking, and pedestrian movement between the docking points when they do not contain docked bicycles. Depending on site circumstances, the terminal will generally be positioned within a 2.0 by 2.0 metre area to provide space for pedestrian circulation and queuing clear of the footway (Figure 3.2).

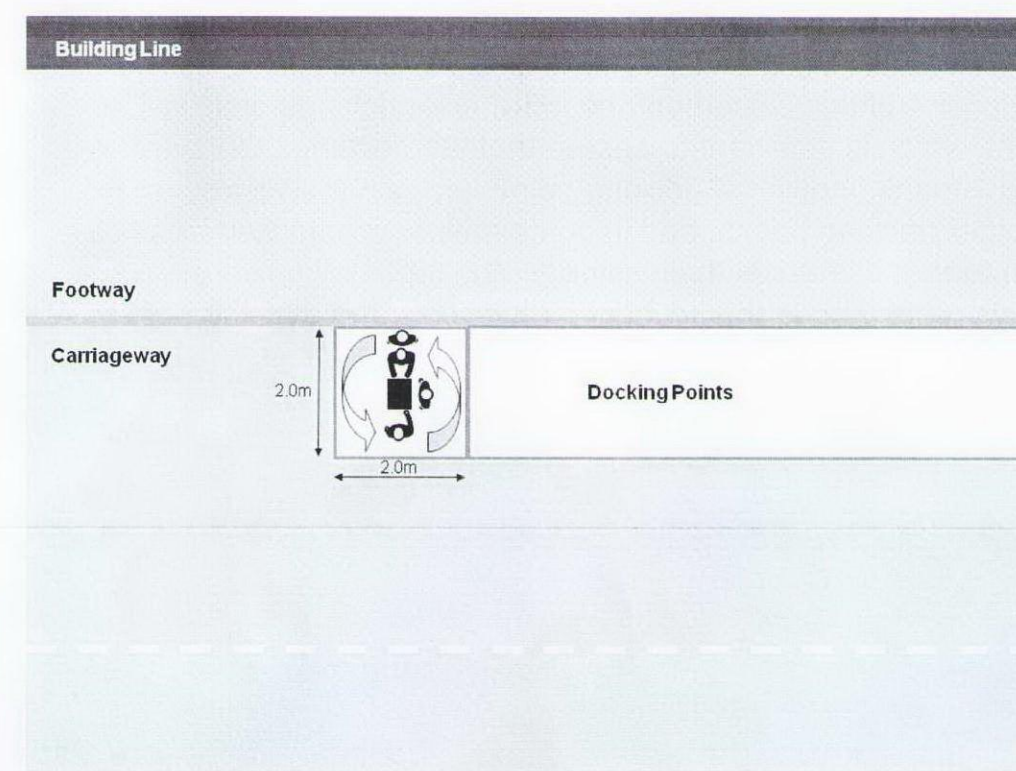

Figure 3.3: Illustration of Pedestrian Circulation around Docking Station

Each docking point will have a London Cycle Hire Scheme key reader enabling registered users to hire bicycles without interaction with the terminal, and in busy locations the terminal will have two payment points. These measures will minimise queuing and help to maintain a clear footway.

4. PLANNING POLICY & GUIDANCE

4.1 Introduction

In making a decision on whether to grant planning permission, Section 38(6) of the Planning and Compulsory Purchase Act 2004 (the 2004 Act) requires that the decision accords with policy within the Development Plan, unless there is policy of particular importance within other planning documents that should be applied. This section thus first provides an appraisal of the extent to which the proposal supports relevant policies within *The London Plan Spatial Development Strategy for Greater London (Consolidated with Alterations Since 2004)* (adopted 2008) (The London Plan), the relevant *Unitary Development Plan* (UDP) and the relevant emerging Local Development Framework (LDF), which together comprise the Development Plan. An appraisal of the proposal against other relevant planning policy and guidance is provided thereafter.

At the national level and regional level the appraisal focuses on sustainability, transport and design policies. At the local level the proposal is assessed against relevant policies within the London Borough of Camden Unitary Development Plan (adopted June 2006), relevant Supplementary Planning Guidance, and policies within the London Borough of Camden Local Implementation Plan and emerging Local Development Framework.

The LDF will replace the UDP in accordance with the new planning system introduced by the 2004 Act. The appraisal of the proposal against the UDP thus only considers those policies 'saved' as part of the transitional arrangements.

4.2 The Development Plan

The London Plan

The London Plan sets out policies to accommodate the expected growth of the region in a sustainable manner.

Principles of sustainable development are fundamental to the overall London Plan strategy. Policy 2A.1 (Sustainability Criteria) states that development should take into account impacts on natural resources, environmental and cultural assets and the health of local people. Policy 3C.3 (Sustainable Transport in London) seeks to support shifts to more sustainable modes of transport and improve the provision of cycling facilities. The Scheme introduces a transport mode that will use minimal natural resources, have a minimal impact on the local environment and will promote cycling. It will therefore support these policies.

Improving London's public transport is a key component of the London Plan. Policy 3C.1 (Integrating Transport and Development) seeks to improve public transport, walking and cycling capacity and accessibility whilst Policy 3C.9 seeks to achieve an increase in the capacity, quality and integration of public transport in London.

The Scheme will add an additional public transport mode to the network and increase public transport accessibility and capacity. This will make a significant contribution to improving London's transport system.

The London Plan highlights the need for a greater policy emphasis on improving conditions at the local level for those who use public transport, walk, or cycle. Improvements sought are to be achieved by:

- placing appropriate controls on development that help to reduce traffic generation (Policy 3C.17);
- balancing the use of streetscapes through review of the allocation of road space to cyclists and pedestrians (Policy 3C.18); and
- implementing specific measures for cyclists, such as new cycling routes, and new bicycle parking and improving cycling safety (Policy 3C.22).

The Scheme introduces new cycle facilities which supports these policies.
