Location plan at 1:1250

Aurofin Int Ltd has requested that the existing steel frame doors and windows be replaced with matching new U-PVC windows and doors. The units selected have a glass energy rating of B and are far more efficient than the current Building regulations Part L requirement. Security by Design has also been addressed. All windows have compression shoot bolt locking systems with night vent facility and security tape to prevent removal of glass units. The proposed new units will be white and in a matching format to the existing buildings facade system
