Plant Selection

Green Wall Panels are suitable for a wide-range of plants. We produce several varieties and colors of plants for almost any application. Even native species to your local area can be used, however custom plant panels require a testing period of at least 18 to 24 months to ensure their sustainability in the vertical growth environment.

A few of the varieties of plants we currently produce are listed below. These plants are low-maintenance and require less water than most plants and are esthetically beautiful for all four seasons.

Various Ferns

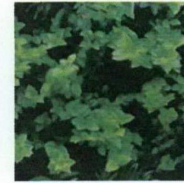

Euonymus Varieties

Sagina varieties

Gaultheria

Vaccinium

Phlox subulata

W Hotel Midtown, Atlanta

Maintenance

- 3-Point Maintenance Plan
 - Plants
 - Irrigation and Drainage
 - Building Envelope
- Year 1 is Establishment Maintenance with Bi-Monthly visits
- Required on all walls
